

City and County of Swansea

Notice of Meeting

You are invited to attend a Meeting of the

Economy, Environment & Infrastructure Policy Development Committee

At: Remotely via Microsoft Teams

On: Thursday, 16 December 2021

Time: 2.00 pm

Chair: Councillor Cyril Anderson

Membership:

Councillors: J E Burtonshaw, P Downing, P R Hood-Williams, P K Jones, M A Langstone, W G Lewis, P Lloyd, P M Matthews and T M White

Watch Online: [//bit.ly/3oNoCh2](https://bit.ly/3oNoCh2)

Agenda

	Page No.
1 Apologies for Absence.	
2 Disclosures of Personal & Prejudicial Interests. www.swansea.gov.uk/disclosureofinterests	
3 Minutes. To approve and sign the Minutes of the previous meeting(s) as a correct record.	1 - 2
4 Management and Maintenance of Open Space (Biodiversity).	3 - 12
5 Tree Policy.	13 - 100
6 Climate Change.	101 - 129
7 Work Plan 2020 - 2022.	130 - 131

Next Meeting: Thursday, 20 January 2022 at 2.00 pm

Huw Evans

Huw Evans
Head of Democratic Services
Thursday, 9 December 2021

Contact: Democratic Services - Tel: (01792) 636923

Agenda Item 3

City and County of Swansea

Minutes of the **Economy, Environment & Infrastructure Policy Development Committee**

Remotely via Microsoft Teams

Thursday, 18 November 2021 at 2.00 pm

Present: Councillor C Anderson (Chair) Presided

Councillor(s)

J E Burtonshaw
M A Langstone
P M Matthews

Councillor(s)

P Downing
W G Lewis
T M White

Councillor(s)

P R Hood-Williams
P Lloyd

Officer(s)

Mark Barrow
Scott Dummett
Phillip John
Martin Nicholls
Samantha Woon

Fleet Manager
Lead Lawyer
Project Manager
Director of Place
Democratic Services Officer

Also Present:

Councillor A S Lewis – Cabinet Member for Climate Change and Service Transformation

Councillor M Thomas – Cabinet Member for Environment Enhancement & Infrastructure Management

Apologies for Absence

Councillor(s): P K Jones & Councillor R Francis-Davies, Cabinet Member for Investment, Regeneration & Tourism

20 Disclosures of Personal & Prejudicial Interests.

In accordance with the Code of Conduct adopted by the City and County of Swansea, no interests were declared.

21 Minutes.

Resolved that the Minutes of the Economy, Environment and Infrastructure Policy Development Committee held on 21 October, 2022, be signed and approved as a correct record.

22 Ultra Low Emission Vehicle Strategy.

The Fleet Manager presented a 'for information' report which detailed the new Ultra Low Emission Strategy that had been submitted to the Welsh Government in support of the Council approach and overarching Green Fleet Policy.

Members' discussed: upskilling of technicians to the Institute of Motor Industry Standards of Competency; apprenticeship opportunities; electric vehicle charging infrastructure demands; hydrogen fuel vehicles and the salary sacrifice scheme.

In response to a question from the Director of Place, the Chair confirmed that the Committee were content with the 20 actions detailed in the transition plan.

The Chair and Cabinet Members for Climate Change and Service Transformation and Environment Enhancement & Infrastructure Management expressed their gratitude to Officers for their hard work in delivering the challenging and time sensitive Strategy.

23 Work Plan 2020 - 2022.

The Chair introduced the Work Plan for 2020-2022.

The Director of Place stated that the Climate Change Strategy had been approved by Cabinet and suggested that the Committee (when considering the issue at the meeting in December) identify the elements of the Strategy where key actions could be examined in further detail.

The Chair referred to the Employability Programmes Update (considered at the meeting in October, 2021) and stated that he and the Vice Chair, would discuss any cross cutting issues directly with the Chair and Vice Chair of the Education Policy Development Committee.

Resolved that the Work Plan 2020-2022 be noted.

The meeting ended at 2.50 pm

Chair

Agenda Item 4

Report of the Director of Place

Economy, Environment & Infrastructure Policy Development Committee

16 December 2021

Management and Maintenance of Open Space (Biodiversity)

Purpose:	A progress update on the review of the Council's management of its green spaces
Policy Framework:	Swansea Council Corporate Priority: Maintaining and enhancing Swansea's natural resources and biodiversity
Consultation:	Access to Services, Finance, Legal, Cabinet Member for Environment Enhancement & Infrastructure Management, Cabinet Member for Investment, Regeneration & Tourism, Nature Conservation Team
Recommendation(s):	It is recommended that: 1) The Committee note the progress to date and direction of travel; and 2) The consultation recommendations are approved.
Report Author:	Jeremy Davies
Finance Officer:	Paul Roach
Legal Officer:	Scott Dummett
Access to Services Officer:	Rhian Miller

1. Introduction

- 1.1 The Parks Service is responsible for maintaining the diverse range of Parks and Open Spaces within the City and County of Swansea. This service offers the community and visitors to Swansea locations the opportunity to enjoy recreational activities, improve health and well-being, participate in sports, relax, learn and play. The service is sub-

divided into sections each with a commitment to deliver a high quality, cost effective service. The Nature Conservation Team also manage a range of Council owned nature reserves and wildlife sites.

1.2 Biodiversity is declining globally, with rates of loss and extinction unprecedented in human history and accelerating. The impact on our biodiversity in Wales and Swansea is no different, with 1 in 6 species at risk of extinction, and 73 species lost from Wales since the 1970s.

- At the all Wales scale the State of Natural Resources Report (SoNaRR), tells us that many of our ecosystems are not resilient to unexpected or unforeseen change.
- Grassland habitats are especially vulnerable to a lack of management because of how rapidly sites can deteriorate in the absence of favourable management or fragmentation. There has been an astonishing 97% loss of lowland semi-natural grasslands in England and Wales in the 20th century.

1.3 All public bodies must maintain and enhance biodiversity and promote the resilience of ecosystems under the Section 6 Duty of the Environment (Wales) Act 2016. The Council has declared a climate emergency and is committed to halt the loss of biodiversity, promote healthy resilient ecosystems, and increase and enhance green infrastructure to adapt to and mitigate for the impacts of climate change, and ensure that our natural environment and the benefits and services it provides are protected for the benefit of future generations. Maintaining and enhancing Swansea's natural resources and biodiversity is a key objective in the Council's corporate plan and is also a priority in Swansea's Well Being Plan. Specific actions under this corporate priority include:

- Continue to deliver a programme of wildflower planting and management.
- Engage with local communities to encourage volunteering and to support them taking action to enhance and maintain their local greenspaces and wildlife sites.

1.4 This report provides an update on progress in managing our grass verges and open spaces for both biodiversity and people with an aim of increasing wildflower diversity and habitat for pollinators as well as maintaining space for recreation.

2. Progress to Date

2.1 Working Group

Following the PDC on 22nd April 2021 a working group was brought together, chaired by Head of Waste, Parks & Cleansing, with the aim of

ensuring appropriate expertise is engaged to deliver the expectations from the original approved report. Officers from the Parks Operations and Nature Conservation service areas have met at least monthly, to ensure the key principles are maintained as they explore options relating to the review of the Council's greenspace maintenance regimes. This group has made good progress facilitating the detail in this update report and conducted an extended meeting in October 2021 to plan activities for 2022.

The outcome of the 2022 planning meeting was an agreement on:

- Identifying numerous sites in addition to those already trialled to expand the trial and utilise different regimes for assessing outcomes.
- Agree cutting options for these sites ranging from cut, collect and remove to zero cutting and consider alternative use such as tree planting.
- Assigning a maintenance plan to each identified site based on their unique topography versus frequencies and equipment.
- Exploring use of contractors for various operational needs.
- Commence categorisation of roadside verges prior to considering the maintenance options for them.

2.2 **Purchase of Equipment:**

To enable the various trials and pieces of work to progress a number of purchases have been made to the sum of ~£140k, funded by Welsh Government grants, which include:

- Cut and collect flail units complete with medium sized tractors for cutting and collecting long grass in open park areas.
- Various walk behind pedestrian tractor and attachments for smaller sites including local nature reserves.
- A further purchase of a £36k ride on cut and collect mower is in progress, also funded by Welsh Government grant monies, which will cut areas of intermediate size.

2.3 **Engagement with Environmental Bodies**

The Nature Conservation Team have been engaging with grassland management experts, including Plantlife, to understand how other councils have been successfully switching to 'cut and collect', and 'cut less, cut later' methodologies. A representative of Butterfly Conservation presented to this working group and the Swansea Nature Partnership, and the main message was that you strive to reduce soil fertility in order to allow native

wildflowers to flourish. Cut and collect is key to this, to take away the nutrients in the grass cuttings. Over time the volume of biomass will reduce, leading to reduced frequency of cutting.

The council employed a Biodiversity Officer in mid-June, a new part-time role to implement the Section 6 Biodiversity and Resilience of Ecosystems Duty under the Environment (Wales) Act 2016. This officer has taken a leading role in reviewing how we manage our green spaces for wildlife and has been utilising Plantlife's expertise and guides as well as drawing on the experience of other local authorities.

2.4 Surveys

Our Biodiversity Officer has undertaken an initial audit of parks and verges that have 'long grass' areas. These are areas of amenity grasslands that are only cut once a year, but the arisings are not collected. This audit highlighted which sites may be suitable for cut & collect, and which sites needed more detailed surveys. A local botanical consultant was then contracted to undertake fine scale plant surveys of a selection of sites. This report will provide a baseline for ongoing monitoring and inform how best to manage the variation across these locations.

It's important that long term monitoring is undertaken to understand how our grass areas are changing as part of this trial. We want to see an increase in biodiversity, which equates to an increase of wildflower species and an increase in nectar source for pollinators. Transects and plots will be set up across a small selection of sites and methodologies are being designed so non-plant experts (park staff / Friends of parks volunteers) can monitor key indicator species and count nectar availability.

2.5 Operational Trials

Initial trials were conducted in Singleton Park which proved logistically challenging and therefore yielded valuable lessons regarding the length of grass and the volumes of arisings having to be removed for composting, further trials were conducted in Morriston Park also. Cut grass removed amounted to approximately:

- Singleton Park 90,000sqm cut and collected 80 tonnes removed
- Morriston Park 22,500sqm cut and collected 40 tonnes removed

There is an associated cost to transporting and disposing of this material when sending for composting. Cut and collect sites are being monitored on a monthly basis with photographic records being kept.

Timing of the cut this year was dictated by the delayed delivery of the newly procured equipment and not ideal therefore in 2022, supported by the external advice received and surveying, we would seek to cut in April, July and September.

Other sites used with the pedestrian tractor cut and bale sites (all bales left on site with various benefits such as new habitats) were:

- Picket Mead.
- Newton open space.
- Mumbles Hill Local Nature Reserve, 2 meadows.

Arisings from these sites equated to:

Picket Mead = 11 bales @ 22.5kg = 247.5 kg

Mumbles Hill = 45 bales @ 22.5kg = 1012.5 kg

2.6 Preparation for expansion of Trials next Season

Informed by the surveys mentioned above and the practicalities of using the currently available machinery, the working group is formulating which sites should be prioritised for further trials next season.

The aim is to undertake 3 cut and collect operations in 2022 during April, July and September, following the external advice received, thus enabling nutrient removal in a manageable way. The grass length in April will be considerably less than during the cut and collect trials this year, and be more manageable.

Following further Welsh Government funding, a smaller ride-on type mower, with cut and collect for use on urban verges, is being purchased.

Each site will, over time, be required to be managed uniquely dependent on the way it responds to the changed maintenance regimes.

It is intended to continue to cut collect with pedestrian baler at Picket Mead and Mumbles Hill LNR whilst investigating new sites.

2.7 Information and raising awareness

The importance of explaining the reasons for changing grassland management regimes in our parks and roadside verges cannot be underestimated. As a start to this the Nature Conservation Team commissioned new bilingual interpretation signs to explain to local communities the biodiversity benefits of undertaking the changes in grassland management. This includes a poster/sign that is placed around the trial sites when the management is undertaken, a flyer for council staff to hand out to interested members of the public, and large signage attached to the new machines as they drive around. All of this is linked to a webpage providing more detail - <https://swansea.gov.uk/cutandcollect>

Signage

Fig1: Example of signage

2.8 Community Consultation

In addition to awareness raising, meaningful consultation and engagement with our local communities is important to ensure that any changes in the management of our parks and verges take into account the views of by residents. This could be undertaken at a strategic/county wide level and /or at a site specific level.

The timing of the former could be linked to other strategic consultations for example: the County wide Green Infrastructure Strategy, the Nature Recovery Action Plan and/or Section 6 Duty Action Plan.

Appendix A contains suggested questions for a strategic consultation.

At a local site level this could best be achieved through direct consultations with local residents, ward members and 'Friends of Groups' based around specific options and outline location/proposals maps. Timings for this will depend on the programme of works planned for each site. This could also be an opportunity to engage local people in the ongoing survey and monitoring work.

Any consultations would require additional resources.

3. General Issues

There is a general perception that reduction in cutting regimes or alteration of practices yields an obvious saving, this is not necessarily the case.

Financial implications are generally unidentified at present due to surveying required prior to management planning, however several local authorities in Wales have undertaken or are in the process of undertaking

trials and the consensus to date is that any alterations in maintenance regimes usually require capital investment initially. Revenue cost neutrality or savings vary depending on scale and type of open space.

Any changes need to be communicated effectively with engagement, social media and signage to educate the public and reduce complaints.

The public were very curious/interested as to what the pedestrian cut/baler was doing and were pleased to be informed about how it worked and what the aims of the work were. There was a benefit in taking the effort to stop and talk to them however this also used operative time. The magnetic panel and information boards produced provided valuable information.

4. Integrated Assessment Implications

The Council is subject to the Equality Act (Public Sector Equality Duty and the socio-economic duty), the Well-being and Future Generation Act 2015 Welsh Language (Wales) Measure, and must in the exercise of their functions, have due regard to the need to:

- Eliminate unlawful discrimination, harassment and victimisation and other conduct prohibited by the Acts.
- Advance equality of opportunity between people who share a protected characteristic and those who do not.
- Foster good relations between people who share a protected characteristic and those who do not.
- Deliver better outcomes for those people who experience socio-economic disadvantage.
- Consider opportunities for people to use the Welsh language.
- Treat the Welsh language no less favourably than English.

All public bodies must maintain and enhance biodiversity and resilience of ecosystems under the Section 6 Duty of the Environment (Wales) Act 2016.

The Well-being of Future Generations (Wales) Act 2005 mandates that public bodies in Wales must carry out sustainable development. Sustainable development means the process of improving the economic, social, environmental and cultural well-being of Wales by taking action, in accordance with the sustainable development principle, aimed at achieving the 'well-being goals'.

Our Integrated Impact Assessment (IIA) process also takes into account other key issues and priorities, such as poverty and social exclusion,

community cohesion, carers and the United Nations Convention on the Rights of the Child (UNCRC) and Welsh language

4.2 An IIA Screening has been opened however is not required until all trials are completed and a set of proposals reported. IIAs will need to be considered for any proposed amendments to policies and procedures as an essential part of the review. The purpose of an impact assessment is to consider:

- Sustainability - analyse whether a proposal balances immediate needs with the well-being of future generations; and
- Equality - help officers and elected members to analyse policies and practices to determine whether they are likely to discriminate or disadvantage people. mitigation - if proposals will result in adverse impacts

5. **Financial Implications**

Three successful bids have been made to Welsh Government for a total of £176K for the purchase of cut and collect equipment.

6. **Legal Implications**

There are no Legal issues arising from this report.

Background Papers:

- Plantlife's: Managing Grassland Road Verges
- NPT Council Verge Management

Note: Background Papers are not printed. However, they are open for public inspection and must therefore be made available on request by the Report Author. Background Papers are those documents relating to the subject matter of the report which:

- a) Disclose any facts or matters on which, in the opinion of the Proper Officer, the report or an important part of the report is based; and
- b) Have, in his opinion, been relied on to a material extent in preparing the report.

Appendices:

Appendix A Draft Questions for Consultation

Appendix A – Draft Questions for Consultation

1. On average, how often do you visit your local park or greenspace?
 - Every day
 - Once a week
 - Once a month
2. Which site/s do you visit?
3. Why do you visit?
 - Exercise
 - Sport (tennis, football, basketball etc.)
 - Dog walking
 - Contact with nature
 - Relaxation (peace and quiet)
 - To meet friends
 - Walking to work/school etc
 - Other
4. On a scale of 1-10, how important is access to green space for your mental and physical health and well-being?
5. What improvements would you like to see made to your local park/greenspace? (For example):
 - More trees
 - More wildflowers
 - More biodiversity
 - More places to sit
 - A community orchard
 - More spaces for food growing
6. Are you interested in joining a local community group to assist with surveying your areas?

Agenda Item 5

Report of the Director of Place

Economy, Environment and Infrastructure Policy Development Committee
16 December 2021

Tree Management Strategy

Purpose:	To adopt a strategy for the management of trees on/affecting land/property in Council ownership and setting out the Council's duties in relation to protected trees
Policy Framework:	Town and Country Planning Act 1990 and Trees Regulations 1999; The Forestry Act 1967; The Hedgerow Regulations 1997; The Well-being of Future Generations (Wales) Act 2015; Environment (Wales) Act 2016; Future Wales - The National Plan 2021; Planning Policy Wales 2011; Technical Advice Note 10- Tree Preservation Order 1997; Swansea Corporate Plan 2018-2022; Swansea Local Development Plan 2019; Trees , Hedgerows and Woodlands Supplementary Planning Guidance 2021; Swansea Central Area – Regenerating our City for Wellbeing and Wildlife, 2021
Consultation:	Access to Services, Finance, Legal, Parks, Highways, Housing, Corporate Property and Environmental Health.
Recommendation(s):	It is recommended that: 1.) The Tree Management Strategy is agreed and referred to Cabinet for approval 2.) A mapping exercise is carried out to identify potential sites/zones for planting on Council owned land subject to future funding and maintenance availability
Report Author: Paul Meller Finance Officer: Aimee Dyer Legal Officer: Jonathan Wills Access to Services Officer:	Catherine Window

1. Introduction

- 1.1 Preparation of this Strategy was a recommendation of the Tree Scrutiny Panel in 2017, and its production is an action of the Natural Environment Scrutiny Inquiry in 2018 and a Corporate Plan Natural Resources and Biodiversity objective.
- 1.2 The aims of this Strategy in relation to Council owned land/property are to:
 - Ensure risks from and to trees are adequately managed
 - Ensure the Council meets its biodiversity duties in respect of trees
 - Conserve trees of value
 - Maintain and expand tree canopy cover
- 1.3 Adoption of this Strategy will address an identified risk on the corporate risk register in relation to trees on Council owned land.

2. Background and Context

- 2.1 Trees positively contribute to the scenic character and diversity of the landscape in and around the County, and have a vital role to play in promoting sustainable communities. They are important in the creation of 'Place', provide vital habitat for dependant wildlife populations and substantial environmental and health benefits, such as attenuation of noise and improving air quality.
- 2.2 Trees are also of vital importance in addressing climate change and nature emergency through carbon sequestration and the creation of more resilient ecosystems.
- 2.3 Responsibility for the management of the Council's tree stock falls to each department/service area that has trees on its land including individual schools. This Strategy has therefore been produced to ensure a consistent approach to dealing with tree related matters across the Council and compliance with legislation relating to the protection of trees.
- 2.4 As at 2021, around 43,000 individual trees in Council ownership have been surveyed with more than 1439 woodlands and tree groups plotted and surveyed containing an estimated 100,000 additional trees. However significant areas of Council land ownership remain to be surveyed including the two biggest woodlands – Lower Swansea Valley and Clyne Country Park estimated to contain 250,000 trees between them.
- 2.5 The Council has responsibility for the management and maintenance of all these trees in addition to those trees which are protected under legislation - there are over 50,000 protected trees throughout the County - and duties and aspects of responsibility for trees that are privately owned.

- 2.6 This is not a strategy for managing all trees within the County as that is beyond the Council's remit. It only deals with those trees over which the Council has an element of control and does not seek to duplicate the provisions of other organisation's areas of control and responsibility such as Natural Resources Wales and the National Trust who own and manage extensive areas of woodland within the County. However it does contain good management practice that other land owning organisations may wish to adopt and apply if they do not already have their own strategies in place.
- 2.7 The Strategy does include some general guidance to be taken into account when considering tree planting proposals, but does not specify locations where trees may be planted. In the short term tree planting/replacement schemes need to be considered on their individual merits having regard to the particular circumstances of each proposal. Emerging work on ecosystem resilience mapping and habitat connectivity will help to identify locations where there could be potential for further tree planting as part of the preparation of the Council's forthcoming Green Infrastructure Strategy.
- 2.8 A mapping exercise is planned to be carried out during 2022 to identify potential sites/zones for planting on Council owned land subject to future funding and maintenance availability. It is the intention that this will be undertaken in a phased manner to complement existing ongoing nature recovery/green infrastructure work within parks, local nature reserves, etc, and the current enhancements to highways, housing and education land before considering wider landholdings. It should be noted that there is currently plenty of capital grant funding available for tree purchase, but limited revenue funding/resources for planting and future maintenance.
- 2.9 Any Council development proposals requiring planning permission that affect trees will need to follow policy set out in the Swansea Local Development Plan and the recently adopted Supplementary Planning Guidance (SPG): Trees, Hedgerows and Woodland. Furthermore, there is an expectation that all departments within the Council will seek to adhere to the Swansea Tree Replacement Standard set out in this SPG when undertaking projects involving tree felling that do not constitute development and are thus not enforceable by any legislation. The Tree Replacement Standard is appended to the Tree Management Strategy for reference purposes.
- 2.10 The Strategy outlines the various risks to and from trees to be taken into consideration when managing trees on Council owned land. These are risks which are equally applicable to trees on land across the County, including:
- Development
 - Disease
 - Conflicting Management
 - Lack of Resources

- Land Disposal
- Regeneration Schemes
- Damage to Services/Infrastructure, and
- Tree Removal

2.11 The Strategy sets out various protocols for managing these risks, which includes proactive inspections, safety works, mitigation for protected species and the circumstances when lopping/felling may be necessary. It supersedes the Protected Tree Protocol adopted by Planning Committee in 2018 and clarifies how the Council will carry out its duties in respect of protected trees. It will be an essential reference document published on the Council's website for staff, councillors and members of the public to ensure a clear and consistent approach to dealing with tree management and any concerns in relation to the Council's trees.

2.12 Appended to the Strategy is background information on the benefits of trees; the legislative context; further details of current management and inspection practice; guidance on managing ash die-back; as well as a tree planting checklist (Right Tree in the Right Place) and a consultation protocol to be followed when considering a tree planting programme or grant funded scheme.

3. Integrated Assessment Implications

3.1 The Council is subject to the Equality Act (Public Sector Equality Duty and the socio-economic duty), the Well-being of Future Generations (Wales) Act 2015 and the Welsh Language (Wales) Measure, and must in the exercise of their functions, have due regard to the need to:

- Eliminate unlawful discrimination, harassment and victimisation and other conduct prohibited by the Acts.
- Advance equality of opportunity between people who share a protected characteristic and those who do not.
- Foster good relations between people who share a protected characteristic and those who do not.
- Deliver better outcomes for those people who experience socio-economic disadvantage
- Consider opportunities for people to use the Welsh language
- Treat the Welsh language no less favourably than English.
- Ensure that the needs of the present are met without compromising the ability of future generations to meet their own needs.

3.1.1 The Well-being of Future Generations (Wales) Act 2015 mandates that public bodies in Wales must carry out sustainable development. Sustainable development means the process of improving the economic, social, environmental and cultural well-being of Wales by taking action, in accordance with the sustainable development principle, aimed at achieving the 'well-being goals'.

- 3.1.2 Our Integrated Impact Assessment (IIA) process ensures we have paid due regard to the above. It also takes into account other key issues and priorities, such as poverty and social exclusion, community cohesion, carers, the United Nations Convention on the Rights of the Child (UNCRC) and Welsh language.
- 3.2 The Tree Management Strategy will ensure that all people and communities enjoy the full financial, social/cultural, economic and environmental benefits of sound and consistent management and maintenance of Council owned trees. Some groups including children, those with underlying health issues and future generations will enjoy the greatest benefits through the Strategy's role in contributing to the retention and expansion of tree canopy coverage within the County.
- 3.3 The Strategy has been produced collaboratively by the various service areas responsible for the management of trees and brings current best practice together in a single document for the benefit of those departments and sections that have trees on their land to ensure a consistent corporate approach for dealing with tree related matters. It will help to address the risks to trees from disease, development damage, etc, and the long term challenge of increasing tree canopy cover throughout the County working with partner/funding organisations and voluntary groups. It will also assist with local measures to tackle nature and climate emergency for the benefit of future generations.
- 3.4 Its production, in accord with the 5 ways of working in the Well Being of Future Generations Act, is a specific step of the Corporate Plan Objective for Natural Resources and Biodiversity. The adoption of this document will address the corporate risk of not having a Tree Management Strategy in place and will bring the Council in line with other local authorities in this regard.
- 3.5 The Strategy will support national and local policies for the protection of trees and emerging national and local plans and strategies for expanding tree canopy coverage in recognition of the vital role trees play in addressing climate change through carbon sequestration and the creation of more resilient ecosystems, as well as their significant health and well-being benefits.

4. Financial Implications

- 4.1 There are no financial implications associated with this report which outlines existing management practices. Any changes to these practices, such as amending standards that would require undertaking additional works, would have financial implications and need further resources to be identified to be able to achieve.

5. Legal Implications

- 5.1 The Council is responsible for the management and maintenance of trees on land in its ownership and has a duty of care to ensure risks both to and from the trees are managed in the interests of public safety and the health of the trees in carrying out its biodiversity duties.
- 5.2 The Council has a statutory obligation to manage trees that are within areas of its control; these are principally the Highways Act 1980 and the Occupiers' Liability Act 1957 & 1984.
- 5.3 Adoption of this strategy will inform members of the public, Councillors, staff and other interested parties about when, why, whether and how the Council will undertake works to its trees and woodlands.

Strategy

1 Purpose and Background

- 1.1 Trees positively contribute to the scenic character and diversity of the landscape in and around towns and cities, and have a vital role to play in promoting sustainable communities. They are important in the creation of 'Place', provide vital habitat for dependant wildlife populations and substantial environmental and health benefits, such as attenuation of noise, flooding and improving air quality.
- 1.2 Trees are also of vital importance in addressing Climate and Nature Emergencies through carbon sequestration and the creation of more resilient ecosystems.
- 1.3 Trees help protect buildings from the elements, provide shade and assist in energy conservation. They also enhance the setting of new development, its character, sense of maturity and overall quality, thus helping with the saleability and profitability of properties. Their positive effect on the environment also helps to attract businesses and visitors to an area, thereby boosting the economy. Further details of the financial, economic,

social/cultural and environmental benefits of trees are outlined in Appendix A4.

- 1.4 In this context the Tree Management Strategy sets out Swansea Council's **protocols** for the management of trees on land in Council ownership, as well as how protected trees and trees in private ownership affecting Council land will be dealt with.
- 1.5 It seeks to ensure that the Council manages the trees it looks after well and has regard to the benefits of and risks to trees. A separate Green Infrastructure Strategy will include an assessment of the potential for tree planting County-wide and include long term objectives to drive up tree numbers and canopy cover as well as to plant more native and diverse species to improve connectivity and protect trees for future generations.
- 1.6 Preparation of this Strategy was a recommendation of the Tree Scrutiny Panel in 2017, and its production is an action of the Natural Environment Scrutiny Inquiry in 2018 and a Corporate Plan Biodiversity objective (2018-2022).
- 1.7 The aims of this Strategy in relation to Council owned land are to:
- Ensure risks from and to trees are adequately managed

- Ensure the Council meets its biodiversity duties in respect of trees
- Conserve trees of value
- Maintain and expand tree canopy cover

1.8 Responsibility for the management of the Council's tree stock falls to each department/ service area that has trees on its land. Management/inspection is carried out by the Tree Services Unit for those service areas where there is corporate responsibility for assets such as Highways, Estates, Leisure, etc, however departments with devolved budgets such as Education and Housing arrange for ongoing tree assessments by the Tree Services Unit. This Strategy has therefore been produced to ensure a consistent approach to dealing with tree related matters across the Council and compliance with legislation relating to the protection of trees.

1.9 The City and County of Swansea's (the County's) trees provide an enormous asset and make it one of the greenest urban areas in Wales. Beyond the urban centres, trees form an important part of the diverse landscape character and biodiversity of the County. Approximately 18.8% of the County is covered by tree canopy compared to a national average of 16.8% (based on Natural Resources Wales figures). Throughout the towns, villages and streets of the County trees form important local landmarks and

landscape features and add greatly to the setting of important buildings.

1.10 The Council has significant land holdings with substantial areas of trees, hedgerows and woodlands controlled by a range of service areas and departments including Parks, Education, Social Services, Housing, Nature Conservation and Highways. The Council also owns several woodlands managed by others.
<https://www.swansea.gov.uk/parksatoz> .

1.11 As at 2021, around 43,000 individual trees in Council ownership had been surveyed with more than 1439 woodlands and tree groupings plotted and surveyed containing an estimated 100k additional trees. However, significant areas of Council land ownership still remain to be surveyed, including our two biggest woodlands - Clyne Country Park and Lower Swansea Valley estimated to contain 250k trees between them.

1.12.1 Generally trees in Council ownership are not protected, this does not mean however that these trees are unworthy of protection. The Council has responsibility for the management and maintenance of these trees in addition to its role in regulating works to or agreeing the removal of those trees which are protected under legislation - there are over 50,000 protected trees throughout the County - and duties and aspects of responsibility for trees that are privately owned.

1.13 The national and local legislative context for the protection of trees is set out in Appendix A3. This Strategy is not a material consideration in the determination of planning applications – there is separate Local Development Plan Policy and Supplementary Planning Guidance (Trees Hedgerows and Woodlands) that covers how trees are dealt with through the planning system:
<https://www.swansea.gov.uk/treespg>

1.14 The Strategy highlights the Swansea Tree Replacement Standard as defined in the Trees, Hedgerows and Woodlands Supplementary Planning Guidance (see Annex A7). This Standard sets out the methodology for calculating the number of replacement trees required to be re-provided if proposed to be removed by a development that requires planning permission. It will therefore apply to all Council development schemes that require a planning application to be made. Whilst the Standard is not enforceable when considering proposals that do not require planning permission, as a responsible landowner the Council will use the standard to inform decisions with regard to replacement of trees felled as a result of any of its proposals.

1.15 Any Council scheme affecting trees regardless of whether or not it requires planning permission should take into consideration national and local policy principles when making decisions about tree stock, namely that:

- Proposals that would adversely affect significant trees should be avoided in the first instance
- A Tree Survey (BS 5837:2012) should be carried out to assess the impact of a proposal on trees within and/or adjoining the site
- Where a proposal affecting trees cannot be avoided, Category A and B trees should be retained and integrated into the design and layout of the scheme, unless exceptional circumstances justify the removal of a particular tree
- Replacement trees should include large growing and long-lived species (where appropriate), and where replacement is on site it should be chosen as part of the design of the proposal
- Mitigation should reflect the impact of loss of canopy cover, and not simply the number of tree stems lost

1.16 The Strategy provides general guidance on tree planting but does not specify locations where trees may be planted. Tree planting schemes need to be considered on their individual merits having regard to the particular circumstances of each proposal.

1.17 Emerging work on ecosystem resilience mapping and habitat connectivity will help to identify specific locations where there could be potential for further tree planting as part of, or in support of, the preparation of a separate forthcoming County-wide Green Infrastructure Strategy. Annex A8 of this document sets out the guidelines and protocols to be followed when

considering tree planting projects at any location. Any persons interested in tree planting on Council owned land should contact Parks or the Nature Conservation Team in the first instance (Appendix A2 refers).

2 Risks to Trees

There are a variety of challenges facing trees, ranging from infrastructure development and land disposal to pollution, climate change and disease. The main threats are:

2.1 Development

2.1.1 In particular, trees on development sites and those on land allocated for development in the Swansea Local Development Plan (LDP). The continuing requirement for additional housing provision and land for development has led to significant loss of trees within the County. A tree may take a century to reach maturity, but it can be damaged or felled in a few minutes. Such damage is frequently caused unwittingly because of a failure to appreciate the vulnerability of trees, particularly the root system, and how easily they can be damaged.

2.1.2 Where trees are damaged during development of a site and subsequently decline and die, or where inappropriate or poor design leads to conflict, trees become a constant source of complaint and ultimately, any positive benefits are lost. Early erection of tree and landscape protection measures to form construction

exclusion zones before work commences on site is essential.

2.1.3 There is therefore increasing pressure to focus attention on trees and their role in providing a more pleasant and healthier environment. It is the responsibility of the Council to ensure that adequate provision is made for the preservation of trees (especially veteran trees), the planting of new trees and maintenance thereof either through the integration of trees into the design of developments, or through imposing conditions or planning obligations as part of a planning permission and /or Tree Preservation Orders (TPOs). Further information is provided in the Tree SPG.

2.2 Diseases

2.2.1 The main current threats present in the UK are:

- **Ash die back:** which affects approximately 20% of the tree cover within the County
<https://www.swansea.gov.uk/tpofaqs>
- **Oak processionary moth:** affecting oaks, recently found in Cardiff (2019)
- **Bleeding canker:** affecting bark of various species including horse chestnut, lime and alder
- **Leaf miner:** affecting horse chestnut
- **Massaria disease:** affecting planes

- **Phytophthora species:** affecting oaks, larch and other species
- **Xylella Fastidiosa** : threatens pedunculate oak and wych elm, as well as plane and northern red oak

2.2.2 Other pests and diseases spreading across Europe and the World can devastate most broadleaved species.

This includes:

- **Asian Long Horned Beetle**

An outbreak in Kent was eradicated after several years of trapping and felling trees. The beetles were imported in the wood of packing cases from the Far East. Larvae of the beetle tunnel through branches leading to structural failure.

- **Ceratocystis Platani**

A canker stain of plane, present in France where it is devastating plane stocks and landmarks.

Asian Long Horned Beetle

Canal Du Midi, France

2.3 Conflicting Management

2.3.1 There may be occasions where trees are required to be removed to conserve other habitats. For example, Kilvey Hill, Swansea Vale, Cadle Heath Local Nature Reserve (LNR) and Llewellyn Heath have all had scrub, willow, gorse and birch removed to prevent encroachment into heath, marshy grassland and purple moor grass. Holm oak growth has also been removed from Bishops Wood LNR to conserve limestone grassland.

2.3.2 Mass tree planting of new woodland areas if not carefully sited can damage other existing priority habitats. There are increasing pressures and financial incentives to plant more trees and woodlands to meet climate change targets. Tree seedlings and saplings (whips) are frequently offered to the Council and other organisations through donations and grants but their acceptance and planting must be treated with caution.

It is important to ensure that we are planting the right trees in the right places for the right reasons and work is underway to identify suitable locations for future planting at both a local and Wales wide level

- 2.3.3 Whips are also difficult to manage unless mulched to prevent competitive weed growth until a closed canopy is achieved, i.e. there is otherwise a need to cut and strim around, costly to maintain and prone to vandalism. They are most suited for use as part of hedgerow planting/reinforcement in the creation of wildlife corridors, copses and woodlands. Larger individual trees generally pose far less risk/maintenance issues when established.

2.4 Lack of Resources

- 2.4.1 Whilst at this time there is a significant amount of grant funding available to local authorities and voluntary groups to obtain whips/trees for planting, there are considerable additional costs to be accounted for, both in terms of carrying out the planting – especially in hardstanding areas (see Annex A7) - as well future maintenance, watering, etc, for which there are currently no resources or finance available. Any tree planting programmes and grant bids for trees initiated by the Council or proposed on Council owned land

must therefore include funding set aside for planting and future years' maintenance costs.

- 2.4.2 Another resource issue can be the supply of trees, with some difficulties obtaining native tree stock for planting programmes and landscaping. A community tree nursery has recently been established at Clyne Gardens that specialises in growing native trees from locally collected seeds and more projects of this nature are encouraged to increase local tree supply.

2.5 Disposal of Council Owned Land

- 2.5.1 The Council is under severe financial pressures and the release of surplus land is an accepted means of assisting with shortfall and generating important capital receipt, as well as contributing to alternative Council priorities such as additional housing provision or regeneration.
- 2.5.2 Where there are trees on an identified site, appropriate due diligence takes place typically with tree and ecology surveys undertaken and disclosed as part of the disposal process. The Council have the ability to survey and protect with a Tree Preservation Order and other means as reasonably appropriate. Disposal does not fetter the Council and the disposal process provides sufficient time for the Council to introduce safeguard measures where appropriate.

2.5.3 The Council is under a statutory biodiversity duty to protect natural heritage features such as trees, in order to meet obligations under the Wales Environment Act 2016. Disposal without safeguard measures can threaten the retention of trees if land is considered, at least in theory, to be potentially worth more if areas of trees can be cleared to enable more of it to be developed. However, such valuations need to take into account the value of the ecosystem service benefits trees provide as highlighted in Appendix A4. In particular the value of the trees to the local environment and the potential 18% uplift in land value with trees on the site.

2.6 Regeneration Schemes

2.6.1 Established street trees have been/are being removed to enable infrastructure improvements and site specific redevelopment proposals to proceed. However in many instances these trees have not been appropriate for the location due to initial wrong choice of species, poor siting and planting method, for example, lack of root retention barrier, etc. Where regeneration schemes are carried out on Council owned land any trees that are lost should be replaced with an additional number of trees of an appropriate type and to an appropriate planting method- the Swansea Tree Replacement Standard refers.

2.7 Damage to Services / Infrastructure

2.7.1 Many street trees, such as those in the Uplands, Swansea, were planted in verges with no root deflectors or structured planting pits. As these trees continue to mature they conflict with kerbs, pavements and buildings and this leads to increasing pressure for them to be removed. In such circumstances replacement in situ is very costly and often too difficult to achieve because of increased levels of service provision and connections.

2.7.2 There are also occasions where public utility companies require entry to Council land under their statutory powers to undertake essential felling or other works to safeguard the integrity of their network.

2.8 Tree Removal on Private Land

2.8.1 Trees located on private land may be protected by a Tree Preservation Order or because the property lies within a Conservation Area, or are covered by biodiversity legislation. Planning permissions may also provide protection by imposing conditions or planning obligations relating to trees on or adjacent to a site. Owners should check with the Council's Landscape Team (Appendix A2 refers) before carrying out any work to trees on their land.

2.8.2 Many trees in Swansea are on Network Rail land. Network Rail are undertaking a programme of removing trees within falling distance of tracks which will result in millions of trees being removed throughout the UK. The Council will work with Network Rail as it fells trees across the County to ensure tree replanting initiatives offset the biodiversity loss arising.

Clearance of trees on track embankment

Protocols

3.0 The following protocols deal with tree hazards, works to trees, tree nuisances, subsidence, woodland management, trees in private ownership affecting Council land and protected trees. The protocols are not mutually exclusive and should be considered against each other, for example, there will always be a requirement to identify protected trees and to consider the impact on protected species before commencing any work.

3.1 Tree Hazards

TH1: Proactive Tree Inspection

There will be proactive inspection of the Council's tree stock on a cyclical basis. The aim is to inspect all trees within a four year period. However, due to pressure of dealing with the effects of ash die back work to mitigate the risk posed by that will be prioritised. Inspections will be undertaken by a suitably qualified and experienced arboriculturist employed by the Council.

3.1.1 This section sets out the Council's protocols for reactive work to trees in Council ownership, and classifies tree hazards as: Urgent, Essential, Desirable and No Work Required (NWR).

3.1.2 A tree that is in immediate danger of failure, or has already failed in a busy or built up area, would likely constitute a very high risk. If a tree poses an immediate and present danger it will be made safe within 4 hours (Urgent) unless there are multiple calls ongoing. If the level of risk is lower, the tree will be made safe as soon as possible (Essential).

TH2: Unsafe Trees - Requiring Immediate Action (Urgent)

If a tree is in such a condition that it poses a very high risk to people or property, the Council will endeavour to attend the site as an emergency normally within 2 hours and always within 4 hours (unless weather events prevent this). If work cannot be completed, areas at risk will be cordoned off until resources are available.

3.1.3 Immediate work out of hours will be carried out by an on-call tree gang.

3.1.4 Typical signs that a tree is in such condition to warrant immediate action include:

- a) Tree is snapped or blown over
- b) Tree uprooted but held up by another tree or building
- c) A large branch has broken off or is hanging off the tree
- d) Tree or branch is blocking the road or footpath
- e) Tree or branch is blocking access to property, or
- f) Tree has fallen onto house or car

TH3: Trees - Not Requiring Immediate Action (Essential)

Trees that are perceived as high risk but present no immediate risk to the public will be made safe depending on the level of risk identified at the time of inspection. Tree hazards judged to be high risk will be made safe as soon as possible.

Works on trees that are not considered high risk but where essential remedial work is required will endeavour to be carried out within twelve months of inspection (Essential).

All Essential works will be judged on site based risk assessment. Work will usually be carried out within one year where possible unless unforeseen circumstances such as storms delay the work further.

3.1.5 Typical signs that a tree is a risk to people or property but the risk does not require an emergency response:

- a) Tree is dead
- b) Tree is dying - few leaves in summer or dieback in the crown
- c) Bark is loose and falling off
- d) Mushrooms or fungi growing on or near the tree
- e) Old splits and cracks in the trunk or large branches
- f) Smaller branches or twigs falling from the tree

TH4: Trees – All Other Work (Desirable)

Works on trees that are not considered Urgent or Essential will be classed as Desirable and go into a low risk work programme. Desirable work will only be carried out where resources and work programming allow.

3.1.6 Trees can be made safe via pruning or felling. Typically the most cost effective approach will be employed, but for certain high value trees other options will be considered to reduce risk to an acceptable level, including options to reduce the likelihood of the tree failing, or the likelihood of persons being close to the tree if it did fail.

3.2 Tree Works

TW1: Protected Species

The Council will:

- Carry out inspections of trees prior to tree works for nesting birds, taking particular care during the nesting period of March – early September
- Carry out inspections of trees for bat roosts or areas of land for badger sets, likely to be disturbed by tree or woodland works and seek expert advice from relevant organisations or a Council Ecologist, and
- When felling Ash trees, where opportunities exist and it has been deemed safe to do so, the following techniques should be utilised, in order of priority. These techniques will be particularly beneficial where it is a mature tree, has features such as a hollow trunk or a rich/rare assemblage of lower plants / fungi:
 - Pollard the tree or leave a section as standing dead, or if not possible:
 - Retain the stump, hollowing it out so as to hold water
 - Retain sections of dead wood on site, particularly where there is a greater species density. If possible to attach cut branches, or sections of bark, to a nearby tree, in a similar orientation to that which it was found, this would provide greater potential for the species to establish on other trees.

- When chipping cut branches avoid depositing chippings on areas of biodiverse ground flora, especially in sensitive /designated sites and /or ancient woodland

3.2.1 Protected and priority Species are those protected under European UK and Welsh legislation, as identified in Technical Advice Note (TAN) 5 Nature Conservation and Planning (2009). The legislation includes the Habitats Directive, Birds Directive, Wildlife and Countryside Act 1981 and Environment (Wales) Act 2016. Further guidance on dealing with Ash die-back is included in Annex A6. Where tree works affecting protected species are required as part of proposals requiring planning permission, the Biodiversity Supplementary Planning guidance applies <https://www.swansea.gov.uk/biodiversityspg>

Birds

3.2.2 Nesting birds, their nests and eggs are protected by the Wildlife and Countryside Act 1981, as amended by the Countryside and Rights of Way Act 2000. The Acts make it an offence to kill, injure or take any wild bird and to take, damage or destroy any nest that is either in use or being built. Furthermore, birds identified in Schedule 1 (see link below) are afforded protection from intentional or reckless disturbance while nest building, at a nest containing eggs or young, or as a

young dependent. The RSPB provides further guidance on this: <https://www.rspb.org.uk/birds-and-wildlife/advice/wildlife-and-the-law/wildlife-and-countryside-act/schedules/>

- 3.2.3 Felling work should be undertaken outside of the bird nesting season. If tree works need to be carried out within this period the Council's arboricultural services, or contractors engaged by the Council, will check trees to ensure there are no nesting birds present and take appropriate measures to prevent disturbance prior to the commencement of works. The nesting season does vary, depending on species and weather, but generally, it is considered to be from 1st March to early September
- 3.2.4 These measures may mean delaying the works until young birds have flown. If, despite best efforts, a nest is found after work has started, a buffer area around the nest will be created/cordoned off and work to the tree will be postponed until the young birds have flown.
- 3.2.5 Should it be necessary to continue working where nesting birds are found, those carrying out the work should be able to demonstrate that the work was carried out lawfully and could not reasonably have been avoided. The RSPB provides a summary of the most notable exceptions to the protection afforded by the Wildlife and Countryside Act.

Bats

- 3.2.6 All bats, their breeding sites and resting places are protected under the Wildlife and Countryside Act (Schedule 5) and the Conservation of Habitat and Species Regulations 2017 (as amended). This legislation makes it illegal to intentionally or deliberately kill, injure or capture bats; deliberately disturb bats, whether in a roost or not; or to damage, destroy or obstruct a bat roost. Given that trees can be significant hosts to bat roosts inspections will precede works where bat roosts are suspected. This is most likely to occur in mature park or woodland trees.
- 3.2.7 If present, a licence would be needed from Natural Resources Wales (NRW) before proceeding. If works are required immediately on the grounds of public safety and there is no time to engage a licensed bat worker/consultant, then work should follow these mitigation measures:
- i) Keep written and photographic evidence of the tree's hazardous nature, and a record of the measures that were taken to avoid felling / protect bats.
 - ii) Work should be carried out as sensitively as possible, avoiding direct contact with known roosts / areas of bat potential. Where possible, and safe to do so, elevated work platforms should be used to minimise the impact.

- iii) Where it is safe to do so, section fell any limbs that have features with potential for bats, lowering them gently to the ground. Leave any lowered limbs / felled trees in a position that would allow bats to fly away at night.
- iv) Contact NRW or a licensed bat worker for further advice.

3.2.8 Where bat potential or presence is noted and works are deemed necessary, but are not required immediately on the ground of public safety, works can only be carried out between late August and early October or between March and April (dependent on presence of nesting birds, as above), and following the mitigation measures outlined.

Badgers

3.2.9 Badgers are protected under the Protection of Badgers Act 1992, which makes it an offence to wilfully kill, injure or take a badger; to interfere with a sett by damaging or obstructing it; or disturb a badger when it is occupying a sett, recklessly, or with intent. Expert advice will be sought as necessary.

Dormice

3.2.10 Dormice are a native conservation priority species, rare, vulnerable to extinction and given full protection under international and national legislation. It is illegal to damage or destroy its breeding site or resting place. They are typically found in deciduous woodland and

species-rich hedgerow. If suspected to be present a licence would be needed from NRW and expert advice must be sought

Invertebrates

3.2.11 While the following relates specifically to the impact of Ash die back, the principles also hold true for other felled or fallen trees and branches. In the UK some 74 invertebrates are known to be either wholly or largely dependent on Ash trees. They are threatened by the loss of a substantial part of the Welsh population of trees. Of the 74 UK species, 47 have been found in Wales and 27 in Swansea. They include insects such as the Privet Hawk Moth and bark beetles, mites, bugs, thrips and some bees.

3.2.12 The impact on invertebrates will vary depending on the degree of dependence of each species on Ash. The species most likely to be severely affected are those which are either obligate (essential for survival) on Ash at some stage of their life cycle, or very strongly associated with it.

3.2.13 Although the loss of living trees is a real threat to some species, trees that are culled can still be of value to some invertebrates. Good practice is therefore for cut wood to be left in place, which will benefit many wood and fungus feeding insects, and that where possible Ash trunks are left standing rather than cut down.

Lower plants (lichens, mosses, liverworts, etc) and fungi

3.2.14 Ash is incredibly important for a large number of these species, some of which are extremely rare. Lichens in particular, benefit from the relatively high pH of Ash bark, similar to that found on Elm. Given the significant loss of Elm as a result of Dutch Elm disease, this further loss of habitat is a concern for lichen conservation, along with other lower plants, fungi and invertebrates. Records of rare or notable lichens on Ash trees can be accessed via [Lle, the Geo-portal for Wales](#). However given that lichens are extremely under-recorded, this should not be taken as a comprehensive account of the presence of lichens. By taking a sensitive approach to necessary management works, it is possible to minimise the loss of these species.

TW2: Tree Felling

The Council will fell trees where:

- The tree is dead, dying or diseased
- A tree has been proven to be causing subsidence/damage
- The removal of a tree would benefit surrounding trees
- It is the requirement of a management, regeneration or development plan

The Council will not fell trees:

- To save on cyclical maintenance costs
- Where a danger is only perceived due to the tree's size or location

3.2.15 Tree removal is regrettable, but necessary under certain circumstances. The decision to remove a tree is not taken lightly. Trees are usually only felled because it is the best option to reduce the risk of harm to an acceptable level (e.g. dead, dying or diseased trees). A protocol will be developed for members of the public to report suspected tree disease.

3.2.16 The certain circumstances where selective felling is necessary includes: replacement with native trees to improve resilience; for biodiversity enhancement purposes such as pond restoration; and to improve accessibility for wider health and well-being benefits.

TW3: Pruning

The Council will undertake work to trees owned or managed by the Council to:

- Maintain a suitable clearance over the carriageway (associated with a street, road or highway) height clearance will be dependent on location
- Maintain clear lines of sight for traffic and pedestrians at junctions and access points (associated with a street, road or highway)

- Maintain clear lines of sight for traffic signals and street signage (associated with a street, road or highway)
- Ensure that street lights are not unduly blocked by the presence of trees
- Maintain a suitable height clearance over a footway associated with a street, road or highway dependent on use
- Raise trees above a Shared Use Path/Active Travel route/bridleway to an appropriate height based on risk.

Any works necessary to prevent an obstruction to the width of a footway associated with the highway due to the presence of a Council owned tree will be considered on a case-by- case basis, and the Council will:

- Maintain pollarded street trees by re-pollarding every two to five years
- Only create new pollards where there is no other viable management option

3.2.17 There is no minimum height clearance local authorities are statutorily required to maintain over a carriageway. It is noteworthy that each situation is different and clearances are cut on a risk based approach. Where branches overhang a carriageway, footway or other land owned/managed by the Council visual assessments will be made to evaluate their safety.

Complaints received will be assessed on a site by site basis. Provided overhanging branches are healthy and structurally sound there is no legal requirement for their removal. With all assessment of obstruction the use and width of the road will also be taken into consideration to avoid the removal of the large number of mature street trees that lean into or encroach at a lower level onto the edges of the carriageway.

3.2.18 There are also no minimum statutory height clearances over Public Rights of Way. Landowners are responsible for any overhanging branches, but are normally cleared by the Council to a height of 2.1m at the centres of footways and 3m on bridleways without prejudice to landowner's responsibilities. Again, it is noteworthy that each situation is different and clearances are cut on a risk based approach.

TW4: Stump Grinding

The Council will carry out stump grinding where necessary to enable trees to be planted or to remove a significant hazard.

3.2.19 Stump grinding is the practice of removing a tree stump to below ground level by mechanical means to allow for replacement planting. Within highway locations the Council will only consider grinding in tarmac areas.

Otherwise tree stumps will be left at a height so as not to leave a trip hazard.

TW5: Re-cycling

The Council will make the best use of arisings created from required tree work:

- Timber will be collected and re-used as part of the Waste Wood Re-Use Project
- Chip will be used within the Council for footpath dressing or mulch in amenity planting areas

3.2.20 When spreading chip, care must be taken not to smother existing biodiverse ground flora. The Council will not dispose of/recycle any INNS on site generated as part of any works to trees

TW6: Ivy on Trees

The Council will seek to retain an acceptable level of ivy on trees where the inspection for decay or defects is not compromised.

3.2.21 Ivy (*Hedera helix*) provides considerable value as a habitat and food source for wildlife. Unless ivy has established on young or weak trees, where it may compete for water and nutrients and restrict healthy growth, it causes little harm. However, where ivy has taken hold on mature trees, especially those close to roads and public areas, judgements must be made on its retention based on the health of the tree and the possibility of cavities or defects being hidden from view. In these situations removal of ivy may be deemed necessary for risk management purposes.

TW7: Tree Roots

The Council accepts that a reduced standard of regularity of surfacing may be acceptable in order to protect tree roots. Where the presence of roots is not acceptable, the Council will seek to explore engineering options to reduce trip hazards before root pruning or tree removal.

3.2.22 When considering tree roots, the Council will follow guidance published in *Well-managed Highway Infrastructure. A Code of Practice (2016)*. This guidance relates to trees and the highway and indicates that pavements are not required to have perfect surfaces as follows:

“Para B.4.4.4. Although ensuring the safety of footways for users will be a priority, in some cases the presence of roadside trees may complicate the provision of footway surface regularity. The radical treatment or complete tree removal necessary to ensure surface regularity may not be possible or desirable and reduced levels of surface regularity may be a more acceptable outcome.”

3.2.23 The roots of trees exploit the soil in various ways dependent on species and local conditions. Direct root action can deform the surfaces of footpaths, roads or other light structures. To determine whether it is a trip hazard the deformation will be assessed by the Highways Authority. Where a hazard is considered to exist and is attributable to tree roots, engineering options will be explored before root pruning or tree removal is undertaken.

3.2.24 Retention of trees in areas of regeneration will be carefully considered, as a large area of replacement surfacing may be incompatible with localised areas affected by enlarged tree roots.

3.2.25 Indirect root action is more often associated with the drying of clay subsoils during prolonged periods of dry weather and the subsequent downward movement of ground resulting in subsidence damage to buildings. However, subsidence can also be caused by leaking or collapsed drains, particularly if the subsoil under a building contains high proportions of sand, and or

inadequate foundations for the soil type or proximity of vegetation, including trees.

TW8: Private Funding for Tree Works

The Council will not accept funding from private sources for tree works where there is no clear public benefit.

3.2.26 Private requests received for the removal or pruning of Council owned trees where the private individual or organisation offers to make a financial contribution either wholly or in part towards the undertaking of the work will be declined if there is no evidence of wider public benefit.

3.3 Tree Nuisances

TN1: Tree Touching a Building

If a tree that is owned or managed by the Council is touching private property (dwelling, house, boundary wall, garage etc) the Council will take action to remove the nuisance.

3.3.1 In many cases where a tree is touching a building the solution will be for the Council to prune the tree, but in some circumstances it may be more appropriate to fell the tree.

TN2: Tree Overhanging a Property

A tree that is owned or managed by the Council will not be pruned or felled to alleviate the nuisance of branches overhanging private property.

3.3.2 If overhanging branches are healthy and structurally sound there is no legal requirement for their removal. Any alleged nuisance caused by overhanging branches will be taken into consideration as part of the Council's general tree work programme. However this programme is discretionary, is subject to the availability of funding, and will be considered on a balance of amenity, value and nuisance caused.

TN3: Tree Roots and Drains

The Council will not prune, fell or cut the roots of a tree in its ownership or management in order to prevent roots entering private drains that are already broken or damaged.

The Council will cut the roots of a tree stopping a public drain from working.

3.3.3 Tree roots typically enter drains that are already broken or damaged. Tree roots found in a drain are usually symptomatic of an underlying problem requiring repair of the broken pipe. Householders concerned about the condition of their drains are advised to contact their water and sewerage company. Householders are usually responsible for the maintenance of the drains within or on their property.

3.3.4 There is no legal requirement to remove trespassing roots unless it can be proven damage is being caused to property. The onus to prove that damage is occurring rests with the affected landowner who will need to obtain an engineer's report.

TN4: Tree Blocking

The Council will not prune or fell a tree in its ownership or management in order to improve natural light, TV reception, solar panel efficiency or views for private property.

3.3.5 Trees within an urban environment inevitably block light into adjoining property. However, there is no legal "right to light" or "right of view", and therefore no obligation on the Council to carry out works to a tree for the purposes of improving levels of light or views for private property. Complaints about trees within high

hedgerows are dealt with under separate guidance:
<https://www.swansea.gov.uk/highhedges>

3.3.6 If TV reception is believed to be affected by trees householders should contact their satellite or TV provider to find an alternative solution to the problem, for example, relocating the aerial/dish or means to boost the signal. There is no legal requirement to prune or fell healthy trees to provide an improved satellite or TV reception and the Council will not reimburse costs associated with relocating a TV aerial or satellite dish.

3.3.7 Whilst the provision of renewable energy resources is encouraged by the Council, this should not be to the detriment of trees within the vicinity. Trees have an important role in maintaining and improving local amenity, in addition to contributing to local and national targets in tackling climate change. The presence of trees must be fully appreciated when considering a suitable location for the placement of solar collectors and panels, and should not be regarded as an impediment to be removed.

TN5: Fall from Trees

The Council will not prune or fell a tree in its ownership or management in order to remove or reduce leaf fall, sap, blossom, bird droppings, fruit, nuts or problems with wildlife and insects on private property.

3.3.8 The loss of leaves from trees in the autumn is part of the natural cycle and cannot be avoided by pruning. The Council employs teams to work during the autumn to clear fallen leaves on the highway for flood prevention and safety purposes. There is no legal requirement to clear fallen leaves from private property.

3.3.9 Within parks and greenspaces, paths or other areas of hard standing are regularly cleared of fallen leaves, but leaves falling on grass / shrub beds are generally left until the majority of leaves have fallen before they are removed (unless leaving them would damage the grass in which case the accumulated leaves would be removed sooner).

3.3.10 Honeydew is a natural and seasonal problem. It is caused by greenfly (aphids) feeding on the sap from leaves and excreting their sugary, sticky waste. This is often colonised by a mould which causes it to go black. There is little that can be done to remove the aphid which causes the problem and pruning the tree may only offer temporary relief. Any re-growth is often more likely to be colonised by greenfly, thereby potentially increasing the problem.

3.3.11 Some trees, such as Limes, are more prone to attack by greenfly, whilst in some years greenfly are more common especially following a mild winter. When the Council plants new trees it will consider species that are less likely to cause a honeydew problem. Where honeydew affects cars, warm soapy water will remove

the substance, particularly if washed as soon as possible.

3.3.12 Tree blossom usually heralds the start of Spring. Blossom is a natural occurrence, which cannot be avoided by pruning.

3.3.13 Nesting birds are protected under the Wildlife and Countryside Act 1981 (and other related wildlife law). Bird droppings may be a nuisance, but this problem is not a sufficient reason to justify pruning or removing a tree. Warm soapy water will usually be sufficient to remove any bird droppings. Where droppings are regularly falling onto vehicles, owners are encouraged to find somewhere else to park or place a protective covering over their vehicle. The Council will always prioritise the protection of trees for the benefits they provide over the perceived threat of damage to the paintwork of cars.

3.3.14 Fruit trees such as apple, cherry and pear are welcomed in many locations with the added benefit of providing free food. However, if picking other than for personal consumption an application for consent for fruit picking will be required from the Council's Property Services. When considering what to plant, there are some locations where fruit trees are less desirable, for example, where soft fruit would make the pavement slippery or encourage anti-social behaviour such as fruit being thrown. Equally, where fruit trees are established but there is a significant anti-social

behaviour problem the phased removal and replacement with more suitable species will be considered. Locations are in the process of being identified across the County for new community orchards

3.3.15 Bees and other insects are attracted to tree pollen and provide essential ecosystem services. Where bees are present in a tree expert advice should be taken before considering their removal.

TN6: Overhead Cables/Utility Services

The Council will not fell any tree in its ownership or management in order to remove or reduce interference with overhead cables such as telephone wires, the responsibility to do this lies with the owner of the cables e.g. Western Power, Open Reach. There may be instances where the Council will undertake works to prune trees to reduce interference where this would be an effective measure.

3.3.16 Householders should contact their telephone service provider to identify alternative solutions to any interference problems, or their relevant utility company who would be expected to carry out any clearance work around cables to the relevant British Standard.

TN7: Large Trees

The Council will not prune or fell any tree in its ownership or management because of complaints that it is considered 'too big' or 'too tall'.

3.3.17 A tree is not dangerous just because it may be considered too big or too tall within its surroundings. Other problems would need to be present, such as those described in protocol TW1 for the Council to consider it to be dangerous.

TN8: Invasive Non-Native Species

The Council will undertake works to remove invasive non-native tree species from its land.

3.3.18 There is a particular problem with Holm Oak *Quercus Ilex* within the County. It is an Invasive Non-Native Species (INNS) that is smothering native limestone grassland and coastal heath. Mumbles Hill and Bishops Wood Local Nature Reserves have been affected, but it has spread more recently to Clyne Valley Country Park and Kilvey Hill. Other INNS that need to be removed where found include False Acacia *Robinia Pseudoacacia* as well as *Rhododendron*

Ponticum. The latter is more a large shrub but is very common and requires constant monitoring and control.

TN9: Malicious Damage, Abuse and Anti-Social Behaviour

The Council will:

- Take acts of malicious damage to trees seriously and seek prosecution where individuals are identified
- Aim to prevent and control the abuse of woodlands through rubbish dumping, vandalism and illegal access by consultation and education, or by taking appropriate legal action
- Take measures, to reduce the amount of tree foliage in order to improve views where trees are providing shelter for individuals/groups that are causing a nuisance or pursuing criminal activities

3.3.19 Malicious damage to Council owned trees and woodlands, as well as fly-tipping are criminal offences. Where individuals are identified the trees will be valued using CAVAT (Capital Asset Value for Amenity Trees) and a bill for damages sent to the company or individual responsible with recovery of costs pursued through the Courts as necessary.

3.3.20 Works to improve views would be to assist those policing the area and where possible not at the expense of the trees.

3.4 Tree Planting

TPL1: Tree Planting

The Council will:

- Seek to ensure that more trees are planted annually on land in its ownership/management than are removed, other than those lost naturally or through disease
- Replace all open space and parks trees removed during the course of site management
- Secure integration of new planting into landscape designs or Section 106 contributions to mitigate where loss of trees through development cannot be avoided.
- Ensure the costs of planting replacement trees of an appropriate number are fully covered where Council owned stock is disposed of for private development
- Plant donated trees free of charge working with volunteer groups where appropriate
- Ensure that any trees planted are of a species most suitable for the location with a mix of native species preferred wherever possible

- Target the most deprived areas when applying for/obtaining grant funding/donations for tree planting

3.4.1 The contribution that trees make to the local area and economy is widely acknowledged and additional tree planting will initially be targeted at areas with lower than average tree canopy cover such as Castle, Penderry and Gorseinon Wards, as well as in support of the roll out of the Welsh Housing Quality Standard wider environmental enhancement programme. Other locations to be targeted will be areas of high deprivation as defined in the Welsh Index of Multiple Deprivation (WIMD), which ranks Swansea Lower-layer Super Output Areas (LSOAs) according to domains such as low income, poor health outcomes and poor physical environment.

3.4.2 Annex A8 sets out a tree planting checklist and protocol (Right Tree in the Right Place for the Right Reason) to assist when responding to requests for tree planting on Council owned land. Tree planting impacts on existing habitats and should not be carried out in isolation from understanding of the resilience of the ecosystem within which planting is proposed and the opportunity to improve connections between habitats. A tree planting map is therefore in the process of being

prepared having regard to these factors and will supplement this document and the emerging County-wide Green Infrastructure Strategy during 22/23.

- 3.4.3 Tree species will be chosen to enhance biodiversity wherever possible. In general terms where a native species is suitable for a location it will be used. However in certain circumstances to ensure establishment and prevent undesirable problems, non-native species may be a better choice.
- 3.4.4 The value of existing habitats should be a major consideration when deciding locations for the creation of alternative habitats through tree planting. For example, there may be a completely different planting regime appropriate for brownfield sites compared to greenfield sites, for connecting wildlife corridors to enhance island habitats for pollinators, in the creation of Place, settings for development, screening of bad views/poor neighbour uses, transport corridors, etc
- 3.4.5 Where open space and park trees are removed consideration will be given to replanting in the first planting season following removal unless there are good reasons for not doing so. These may include lack of resources, soil borne disease, changes in land use, underground/overhead utility services or the surrounding tree cover which would restrict good establishment. In such circumstances an alternative

location will need to be identified and/or the planting must be undertaken as soon as possible once resources become available. Any new planting in parks should complement not conflict with play and wider wellbeing objectives

- 3.4.6 The Council welcomes suggestions for planting sites and actively encourages local residents and businesses to take an interest in tree planting and young tree establishment. Unless the proposed area for planting has been identified as one where only native species will be introduced, such as a woodland or other site managed for nature conservation, native and non-native trees may be planted as appropriate. Standard trees planted are normally 12-14 cm in girth (stem circumference measured at a point 1m from ground level), larger areas and / or understoreys are commonly planted with whips 800mm – 1.5 metres in height.
- 3.4.7 New tree planting can be used to increase biodiversity, restore or improve the local landscape character, or introduce trees of a different age class to that which already exists. They may also be planted to improve air quality, reduce noise, provide shade and shelter and reduce flooding. When planting close to dwellings consideration will also need to be given whether there is enough physical room for the new tree to grow and flourish without giving rise to potential future complaints

of excessive shading or other physical problems impacting on the dwelling. Similar considerations will also need to be given when planting trees close to other structures such as footpaths, roads, street lights and existing vegetation.

3.4.8 Where trees that have been implicated in subsidence damage to dwellings are removed it may not always be appropriate to plant a replacement tree of the same species. This is especially the case if the implicated tree is a large, high water demanding species and in such cases smaller species that are appropriate to the site will be considered.

3.4.9 To help maintain and improve continuity of tree cover the Council will undertake the planting of new trees and woodlands on land that it manages where suitable opportunities arise. Where the Council removes trees it will plant replacements when and where it is appropriate to do so having regard to the Swansea Tree Replacement Standard (Annex 7 refers) and carry out a programme of maintenance to ensure that they are given the best start possible. To address budget concerns in this regard departments/service areas are advised to contact the Nature Conservation Team to help identify locations for replanting and access available grant funding. In reaching a decision as to where it would be right to plant new or replacement

trees the Council will take into account the following considerations:

- i) Will the new/replacement tree be of public benefit?
- ii) Is there sufficient room for a new tree to grow and develop without it causing future problems?
- iii) Is there a deficit of younger trees in the area?
- iv) Was the removed tree part of a local feature? E.g. a line of trees, and,
- v) What species add to local distinctiveness and are suitable for biodiversity and the local landscape character, and are these appropriate for the site?
- vi) Are there any alternative uses proposed in respect of the land identified for planting, so as not to compromise any Council scheme or commercial use of the site?

3.4.10 One way to remember the life of a friend or loved one is through the arrangement of a longstanding tribute, a reminder that they are not forgotten and the donation of a tree is often considered on these occasions. Donating a tree may also be considered to commemorate an anniversary or an historical event. The Council Parks and Cleansing Service operate a

memorial/donated tree scheme, details of which may be found at <https://www.swansea.gov.uk/adoptatree>

3.4.11 Funding for additional tree planting needs to include and set aside provision for future maintenance costs, whilst suitable locations for planting will be sought to increase tree cover in support of the Council's forthcoming County-wide Green Infrastructure Strategy.

3.4.12 High quality tree planting will be incorporated into any City Centre or Place-making regeneration schemes with existing trees retained wherever possible. New planting should follow the 5 principles of Green Infrastructure:

- multifunctional
- adapted for climate change
- create healthy places
- support biodiversity
- provide smart and sustainable solutions

Further guidance is set out in:

<https://www.swansea.gov.uk/article/9580/Swansea-Central-Area-Regenerating-our-City-for-Wellbeing-and-Wildlife>

3.5 Subsidence

TS1: Subsidence

When a Council owned tree is implicated in a subsidence or heave case, tree removals will be considered on the balance of probability of the tree causing the damage.

3.5.1 This section sets out the Council's response to both subsidence claims against its own tree stock and subsidence related applications to undertake work to protected trees.

3.5.2 Subsidence is a complex interaction between the soil, building, climate and vegetation that occurs on highly shrinkable clay soils when the soil supporting all or part of a building dries out and consequently shrinks, resulting in part of a building moving downwards. Trees lose water from their leaves through transpiration that is replenished by water taken from the soil by the roots. If the tree takes more water from the soil than is replaced by rainfall, the soil will gradually dry out. Trees have a large root system and they can dry the soil to a great depth which in certain circumstances can critically extend below the level of foundations. The amount of water trees remove from the soil can vary between different species.

3.5.3 The opposite of subsidence is 'heave' which occurs when a shrinkable clay soil re-hydrates (re-wets) and begins to increase in volume exerting upward pressure. Heave can also cause damage to buildings and is just as undesirable as subsidence.

3.5.4 Whilst the Council recognises its responsibilities for the trees it manages or protects, it will expect any claim against its own trees or an application to work on a protected tree to be supported by strong evidence (timing of damage, seasonal movement, presence of roots, etc) that the tree in question has caused or is likely to contribute to (on the balance of probabilities)

damage to a building. Each case will be considered on its individual merits.

3.5.5 There will be situations where a tree makes a negligible contribution to the character or quality of the local environment. In these situations the Council will agree to its removal based only on a visual assessment of the damage.

3.5.6 Where necessary, the Council will obtain expert specialist advice to verify submitted evidence and if it demonstrates that the tree is an influencing cause, permission to remove the tree will not unreasonably be withheld.

TS2: Protected Tree Subsidence

The Council will require the standard information listed on the Tree Preservation Order (TPO) application form where a TPO tree(s) is implicated in a case of subsidence/heave, before considering removal.

3.5.7 The standard tree works application form requires the following documentation: full report from engineer or surveyor, together with one from a tree professional - to

include date and description of property damage; subsoil type and shrinkage potential; location of any roots found and their identification; history of ground and building movement through a distortion survey and/or crack monitoring over suitable period; other vegetation in the vicinity and its management since discovery of the damage.

3.6 Woodlands

TWM1: Woodland Management

The Council will seek to ensure that all its woodlands, including Local Nature Reserves, Ancient Woodlands and Sites of Importance for Nature Conservation (SINCs), are sustained and enhanced on a long term basis for their public recreation use, wildlife habitat and educational potential.

3.6.1 The Council sustains a range of woodlands on its land for their conservation/biodiversity value, often with the involvement and support of local communities (including schools). Woodlands are unique and

different in character with different parameters affecting them. Whilst the production of timber is not a primary objective, thinning and coppice products may find a local market and the Council will seek to make use of these when appropriate to do so. The woodlands will be managed including any replanting and expanding tree canopy cover in line with relevant Local Nature Recovery Action Plans, site management plans, the Wales Woodland Strategy and Welsh Government's aspirations to create a National Forest in Wales.

3.6.2 Further details of Ancient Trees, Woodlands and Veteran Trees are set out in Appendix 3. All known areas of Ancient Woodland and SINCs are shown on the Local Development Plan Constraints and Issues Map. NRW must be consulted on any proposals that may give rise to potentially damaging operations.

3.6.3 The Council will continue to support, encourage and co-ordinate volunteer involvement in many aspects of woodland management under its control, including acting as Tree Wardens. However there are some essential operations that need to be carried out by trained professionals. These include the safety inspections of trees around the perimeters of woodland and adjacent to footpaths, and carrying out essential works for public safety reasons.

3.6.4 The management of woodlands for wildlife in conjunction with allowing public access presents certain challenges. Aspects which are beneficial to one are not necessarily desirable for the other. Trees will only be pruned where public presence is high or to improve the environmental benefits of the woodland.

3.6.5 Management plans for Council woodlands and Local Nature Reserves (LNRs) will be published on the Council's website as and when produced/reviewed. Successful management of a LNR requires a long term approach to habitat management and public access. This includes tree safety management, dealing with ash die back, removal of INNS, maintaining firebreaks, leaving standing and fallen deadwood as wildlife habitats and allowing natural regeneration of fallen trees. The aim is to bring at least 50% of Council owned woodland under favourable management by 2030.

3.6.6 The Council will guide and advise 'Friends of' groups and similar in relation to woodland/LNR management, including helping to identify sources of grant funding and entering management agreements as appropriate. There are sources of grant finding available to voluntary/community groups which the Council is unable to access. Currently the Welsh Government

administer grants for woodland creation and woodland management through a scheme called Glastir, whilst NRW and the National Heritage Lottery Fund also provide grants for Community Woodland schemes.

3.7 Trees in Private Ownership

3.7.1 All trees on privately owned land are the responsibility of the landowner or site occupier/tenant. The Council does not provide an advice service in relation to concerns about the safety of trees on privately owned land. Landowners are advised to contact a qualified arborist to arrange for an inspection and concerned members of the public should contact the landowner. Advice on appointing a suitably qualified contractor is provided in the Tree SPG
<https://www.swansea.gov.uk/treespg?languagepref=en>

TPR1: Trees Falling on Highways

The Council will clear roads blocked by fallen privately owned trees and recover costs where possible.

3.7.2 The Council will clear trees blocking a highway and charge the tree owner. The clearance will not extend into the private land and arisings will be stacked next to the tree on the owner's land where site conditions allow.

3.7.3 During a serious weather event and multiple tree failures, the main arterial routes will be prioritised with other roads being prioritised as appropriate.

TPR2: High Risk Trees

The Council will use its powers under the provisions of the Miscellaneous Provisions Act 1976 to ensure high risk trees are mitigated.

3.7.4 The Council has discretionary powers under the Local Government (Miscellaneous Provisions) Act 1976 to deal with trees in private ownership that pose an imminent danger of damage being caused to people or property. The Council will only undertake work to make trees in private ownership safe under section 23(1) of the Act in exceptional circumstances where there is an imminent danger of failure onto Council land/property and where the owner is unknown. For the purposes of this Strategy, an imminent danger is where a tree or a

substantial part of a tree is about to fail at any moment. Such situations might include one or more of the following:

- Root plate moving
- Extensive trunk decay with buckling evident
- Extensive root decay with signs of fracture
- Catastrophic root damage (e.g. half of root system removed by trenching)
- Failure of a major fork (split trunk or major limb)
- Crack or cavity in a major branch (above 150mm in diameter) with insufficient safety reserves to prevent the branch from failing

3.7.5 The Council will only take action under sections 23(2) and 23(3) of the Local Government (Miscellaneous Provisions) Act 1976 where it is expedient to do so by serving a notice on a landowner to carry out the required safety works. In the event that the landowner is not known or is unable or unwilling to undertake the safety works, the Council will enter the land and carry out the work itself. For the avoidance of doubt, this will only apply where there is an imminent risk to people or property. Any concerns in relation to trees not on or affecting Council land/property are a matter to be dealt with through private action.

3.7.6 There are no powers under the Local Government (Miscellaneous Provisions) Act 1976 for the Council to

become involved with private trees that are merely causing a nuisance to a neighbouring property, for example, by causing shade, blocking views or dropping leaves, flowers or fruit etc. These situations are civil matters and will remain a private matter between the two parties.

TPR3: Risk to Highway Users

The Council will use its powers afforded to it under the provisions of the Highways Act (1980) to ensure risks to highway users are mitigated.

- 3.7.7 If a tree in private ownership is shown to be a danger to the highway (branches obstructing or disease / decay etc within falling distance) it will be identified for work to make it reasonably safe. The land owner will be contacted and instructed to make the tree safe under Section 154 of the Highways Act 1980.
- 3.7.8 Where it is necessary for the Council to undertake this work then it may intervene according to the powers given in the Act if an owner of such trees fails to act in a reasonable timescale (timescales depend upon the degree of risk presented) and may recover from the

tree owner the expenses reasonably incurred by it in so doing.

- 3.7.9 Public Rights of Way (PRoW), which include footpaths and bridleways, are also defined as highways under the provisions of the Highways Act 1980, and private landowners will be held responsible for the safety of trees adjacent to PRoW in the same manner.
- 3.7.10 Similar provisions also apply to hedgerows alongside highways which must be managed to ensure public safety whilst recognising the important landscape and wildlife habitats they provide. Where overgrown hedges impact on highway safety The Council will request the landowner to cut back any overhang under the provision of the Highways Act 1980.

- 3.7.11 Where the Council does take action to make a private tree safe it will seek to recover its reasonable costs from the landowner.

3.8 Protected Trees

- 3.8.1 National Policy and Guidance as set out in Appendix 3 provides for the protection of trees and woodlands. This Strategy supersedes the Protected Tree Protocol adopted by the Council in 2018 and sets out how the Council will carry out its duties in respect of protected trees. It is recognised that for the most part these provisions will apply to trees in private ownership as most Council owned trees are not covered by a TPO,

however it does apply to Council owned trees within Conservation Areas. The duties are translated into the protocols set out below that seek to:

- Assess trees as they come under threat and protect them as and when necessary in accordance with the Council’s statutory duty
- Ensure Tree Preservation Orders afford suitable protection as they are intended
- Deal with Tree Work Applications fairly and consistently
- Take enforcement action where necessary to act as a deterrent to prevent further unauthorised work

3.8.2 A Tree Preservation Order (TPO) makes it an offence to: cut down, top, lop, wilfully damage, or wilfully destroy a protected tree without the local planning authority’s permission. The primary function of a TPO is to protect the amenity contribution that trees make to an area.

3.8.3 There are four types of TPO designation:

- i) **Individual:** each tree designated individually
- ii) **Group:** specified number and species within a group of trees
- iii) **Area:** all trees specified (could be all species) growing at the time of making the order

- iv) **Woodland:** All trees (including saplings) growing in that area either before or after the order was made

3.8.4 Trees growing within a Conservation Area have similar protection to TPO trees. All trees with a trunk diameter of 75mm measured at 1.5m above ground level within Conservation Areas are protected under Section 211 of the Town and Country Planning Act 1990 (as amended). Any proposed works to such trees require a written notification to the Council six weeks prior to beginning those works. Maps of the Conservation Areas in the City and County of Swansea can be viewed at:

<https://www.swansea.gov.uk/conservationareas>

TPO1: New Tree Preservation Orders

All sites and trees will be assessed according to the following criteria:

- a) The trees are of current or future public amenity value. Generally, this will be interpreted as meaning that they are visible from a public place and add value to the streetscene or local landscape. However, evidence of strong cultural, historical, wildlife or rarity value will also be considered

- b) The loss of the trees or damage to them would have a significant impact on the local environment and its enjoyment by the public and there is a significant risk of this happening if a tree preservation order is not made, and
- c) The trees are in reasonable health and condition, have a reasonable life expectancy and are not known to be causing damage to buildings

3.8.5 Under the provisions of section 197 of the Town and Country Planning Act 1990 (as amended), the Council has a duty to protect selected trees and woodlands in the interests of amenity. As the Council is seeking to protect trees and woodlands on behalf of the public, the selected trees or woodlands should generally be of some public amenity benefit. While the primary consideration is the visual impact of trees and woodlands on their local surroundings, consideration may also be given to their ecological, historical or rarity value.

3.8.6 Other selected trees are those that are required to be planted as a part of a planning permission in mitigation of trees that are lost in the development process or in the creation of Place. A monitoring system will be developed to ensure that when landscape schemes are

completed in association with a development the newly planted trees are made subject of a TPO.

3.8.7 A TPO is a legal document that makes it an offence to cut down, top, lop, uproot, wilfully damage or wilfully destroy a tree without permission. Anyone deliberately destroying or cutting down a protected tree can face an unlimited fine if convicted. Fines can also be imposed under the Proceeds of Crime Act if the guilty party has gained a material benefit. The serving of a TPO does not mean that the Council becomes responsible for the trees; the duty of care continues to remain with the tree owner. Protocol TPO4 sets out the Council's approach to TPO contravention.

3.8.8 Whilst the Council has a duty to protect selected trees and woodlands, there is also a need to balance the landscape value of the tree(s) against the species, size, growth potential and the relationship to adjacent buildings and gardens. It is important to ensure that TPOs are not used to perpetuate significant problems arising from the proximity of large trees to buildings. Protocol TPO3 sets out the situations where the Council will consider the removal or pruning of protected trees.

3.8.9 The Council will take a strategic and pro-active approach towards making new TPOs, whereby those trees and woodlands that make the greatest contribution to local amenity are identified and where appropriate are protected.

3.8.10 Ad-hoc requests for new TPO's will be considered in the light of current Government advice as set out in '*TPO's A Guide to the Law and Best Practice*'. To ensure that Council resources are used to the best effect, the level of risk to the tree(s), for example from felling, lopping or construction damage, will remain an important factor in considering whether to make a TPO. It is accepted that many landowners manage their trees in a responsible way and Government advice is that the use of TPOs would not be appropriate where trees and woodlands are being responsibly managed. The Council is considered to be a responsible tree owner in this respect.

3.8.11 Trees on potential development sites including Development Plan allocations, infill plots and pre-application sites will be considered for protection as any threat becomes apparent.

3.8.12 To aid the decision-making process, trees will be assessed where appropriate using the industry recognised **Tree Evaluation Method for Preservation Orders (TEMPO)**. A tree that does not meet the required standard as set out in the methodology will not be included in a preservation order unless it is part of a woodland, and being considered as part of a woodland TPO.

3.8.13 Following receipt of a 'Section 211 Notice of Intent' to remove or work on a qualifying tree growing in a Conservation Area the Council will normally only serve

a TPO where the above criteria are met and particularly where the proposed work would have an adverse impact on the character of the Conservation Area.

3.8.14 The Council will not normally serve TPOs on trees that it is responsible for managing, unless the trees fulfil the above requirements and are at risk.

TPO2: Reviewing Tree Preservation Orders

The Council will continue to review its existing Tree Preservation Orders to ensure that they reflect the current legal, public amenity and land use aspects.

3.8.15 The Council periodically reviews its old TPOs which date back to 1956. A number of these orders contain 'area' or blanket designations that apply to all qualifying trees that were present on a specific parcel of land at the time that the order was made. Any trees that have been planted or have seeded naturally since the order was made are not protected.

3.8.16 To ensure that all TPOs are appropriate, relevant, up to date (available on line) and enforceable the Council will continue to prioritise the review process by concentrating on the following types of orders that contain:

- Inadequately protected trees when compared to updated Regulations (pre 1975)
- Area designations
- Incorrect group definitions
- Developed sites
- Inaccuracies

TPO3: Work to Protected Trees

Permission to fell a protected tree will be granted where one or more of the following apply:

- a) There is strong evidence that the tree on the balance of probabilities would, or is likely to, contribute to damage of a building, or
- b) Where the removal would be in the interests of good *silvicultural* or *arboricultural* management and would benefit the long-term development of adjacent better quality trees, or
- c) The tree has a short life expectancy due to ill-health, or
- d) The tree is at risk of causing damage to people or property where the hazard cannot be reasonably remedied by pruning of the tree

Permission to prune a protected tree will be granted where one or more of the following apply:

- i) The work will improve the structure or longevity of the tree, or
- ii) It is required to prevent damaging interference between the tree and surrounding infrastructure or buildings, or
- iii) It will not affect local amenity and would not harm the long-term health of the tree

3.8.17 Whilst the Council recognises the need to conserve the present tree cover, there will be occasions where tree removal is justified. This protocol sets out the situations where tree removal may be acceptable.

3.8.18 **Silvicultural management** relates to the growing and cultivation of trees as a crop. **Arboricultural management** relates to the cultivation and management of amenity trees.

3.8.19 Protected trees that are dead, dying or dangerous do not require a formal application to be made, although 5 days written notice is required except in the most urgent situations. In these situations the tree owner has to be able to show that the tree is in the condition claimed. **Where a dead, dying or dangerous tree is**

removed, there is a duty on the landowner to plant a replacement tree.

3.8.20 Permission will not normally be given to remove protected trees because of leaf fall, fruit fall, bird droppings, honeydew from aphids, or interference with TV signals/solar panels. When reaching a decision, the Council will take into account public amenity value; species; size; age and condition; density of the canopy; proximity to the building; and the aspect of the property and garden in relation to the tree.

3.8.21 Pruning may sometimes be granted for other reasons, but only if it is within the tree's ability to tolerate the work without unduly impacting on its health, longevity or its value in the landscape. Factors that will be considered include public amenity value; species, size; age; and condition.

3.8.22 Ash die back caused by *Hymenoscyphus fraxineus* is expected to infect most ash trees in the landscape. Such trees falling within categories 1 and 2 of the Woodland Trusts Ash Die Back Toolkit guidance will require the usual tree works application to be made and assessed. Trees in category 3 and 4 will be considered to be dying or dangerous and will qualify to be felled under exemption. Further detail on Ash die back is set out in Annex 6 to this Strategy.

3.8.23 Where there is a requirement to plant a replacement tree it should be of a suitable size and species, with location agreed prior to removal.

TPO4: Enforcement

Where there is sufficient evidence of a contravention involving a protected tree (one subject to a Tree Preservation Order or a qualifying tree growing in a Conservation Area), provided that it is in the public interest to do so, the Council will initiate criminal prosecution proceedings.

Where prosecution is not a suitable course of action the Council will consider cautions, enforcing the planting of replacement trees and/or remedial work under planning powers.

3.8.24 This protocol explains how and when the Council will enforce against: unauthorised works carried out upon, and damage to or felling of trees that are protected by TPOs; unauthorised works carried out upon, and damage to or felling of trees that are situated within Conservation Areas; and, any breach of planning conditions relating to tree retention and protection.

3.8.25 In the case of trees protected by a TPO, the consent of the Council is generally required for any works on the trees following submission of a formal application. Any consent may be subject to conditions, and there is a right of appeal to the Planning Inspectorate <http://gov.wales/topics/planning/appeals/appeal-guidance-and-information/planning->

[appeals/?skip=1&lang=en](#) against a refusal of consent or to the terms of a condition.

3.8.26 Where trees are in a Conservation Area, six weeks' notice must be given to the Council of any proposal to carry out works on the trees. During this six week period, the Council may either raise no objection to the works or make a TPO to prevent those works being carried out. If the Council takes no action within six weeks, the works may go ahead as notified.

3.8.27 Two offences apply to trees protected by TPOs and those within Conservation Areas:

- i) Anyone who cuts down, uproots or wilfully destroys a tree, or who lops, tops or wilfully damages it in such a way that is likely to destroy it, is liable, if convicted, to an unlimited fine. The Courts have held that it is not necessary for a tree to be obliterated for it to be "destroyed" for the purposes of the legislation. It is sufficient for the tree to have been rendered useless as an amenity.
- ii) Anyone who carries out works on a tree, which is not likely to destroy it, is also liable if convicted in the Magistrates Court to an unlimited fine.

3.8.28 In addition to directly carrying out unauthorised works on protected trees, it is an offence to cause or permit such works.

3.8.29 If it is claimed that works are exempt from the usual requirements of the legislation, it is for the defendant to prove that the exemption applies.

3.8.30 Whenever a tree has been removed in contravention of the legislation, or because it is dead, dying or dangerous, there is an automatic duty on the landowner to plant a replacement tree of a suitable size and species at the same place as soon as reasonably possible (unless that requirement is waived by the Council). The replacement tree is then subject to the same protection as the tree that was lost.

3.8.31 If the landowner fails to comply with this requirement, the Council may serve a Tree Replacement Notice within a period of four years to ensure compliance. A Tree Replacement Notice can be appealed to the Planning Inspectorate. If the Notice is not complied with the Council may carry out the replanting works and impose a charge on the land.

DRAFT

A3: Legislative Context

National Policy: The Council has a legal duty to consider trees under the provisions of the following legislation:

A3.1 Town and Country Planning Act, 1990 (as amended) Sections 197 and 198

This relates to the preservation of trees and woodlands and ensuring that trees are fully considered when planning for new development. The Council has a duty to consider all trees in the planning process, i.e. including those which are not protected. It must ensure, whenever appropriate, that in granting planning permission for any development adequate provision is made through the imposition of conditions for the preservation or planting of trees; and to protect trees with Tree Preservation Orders (TPOs) where other threats are identified Under Section 211 of the Act. Trees in Conservation Areas are subject to similar controls as trees to which a TPO applies.

A3.2 The Town and Country Planning (Trees) Regulations, 1999

Prescribes the form of TPOs and the procedure for their making, confirmation, variation and revocation. Consent of the local planning authority is required before any tree protected by the Order may be cut down, topped, lopped, uprooted, damaged or destroyed.

A3.3 The Forestry Act, 1967

Requires a felling licence from Natural Resources Wales (NRW) for the felling of growing trees, subject to various exceptions including trees in gardens, churchyards, orchards or public open space, as well as trees that are diseased, under a certain diameter or volume. A licence is not required for enabling works carried out by a statutory undertaker or where planning permission has been granted for a development.

A3.4 The Hedgerow Regulations, 1997

Aims to secure the retention of important countryside hedgerows by controlling their removal through a system of notification. There is a presumption in retaining and protecting important hedgerows but there are strict criteria and values that must be met including being at least thirty years old and valuable from an archaeological, historical, landscape or wildlife perspective.

A3.5 Well-being of Future Generations (Wales) Act, 2015

The Strategy has been prepared with full consideration of the Council's duties to work towards Wales' seven shared wellbeing goals and to contribute to the sustainable management of natural resources in relation to the retention and

removal of trees and the expansion of tree canopy coverage. In accordance with the Act in exercising its function the Council will seek to maintain and enhance biodiversity and promote ecosystem resilience. When carrying out any works to trees the Council will fully consider the effects on wildlife, minimise any adverse impact and ensure that all works are compliant with relevant legislation.

A3.6 Environment (Wales) Act, 2016

This Act introduced legislation to help secure healthy, resilient and productive ecosystems in Wales for the future, whilst still meeting the challenges of creating jobs, housing and infrastructure. Of particular relevance are the following Parts:

- a) Part 1 Sustainable Management of Natural Resources:** Central to the Act is the need to adopt a more integrated approach to managing natural resources in order to achieve long-term sustainability. It provides a framework to ensure that managing natural resources in a sustainable manner will be a core consideration in decision making. It also sets out responsibilities for Welsh Government, Natural Resources Wales (NRW), Local Authorities and all public authorities, including a Biodiversity Duty to help reverse the decline and secure the long term resilience of biodiversity in Wales. This duty links to and is further underpinned by the Resilience Goal of the Well-being of Future Generations Act. The Biodiversity Duty requires Local Authorities *“to seek to maintain and enhance biodiversity in the exercise of functions in relation to Wales, and in so doing, promote the resilience of ecosystems so far as consistent with the proper exercise of those functions”*.
- b) Part 2 Climate Change:** Provides the Welsh Ministers with powers to put in place statutory emission reduction targets, including at least an 80% reduction in emissions by 2050 and carbon budgeting to support their delivery. This sets a clear pathway for decarbonisation and provides certainty and clarity for business and investment. Consideration of tree retention and planting will help meet the requirements of this part of the Act. Swansea Council has set itself the target of being a net zero Carbon Council by 2030.

A3.7 Future Wales: The National Plan 2040, 2021

Seeks to create a National Forest by increasing woodland cover in Wales by 2000ha per annum from 2020-2040 in order to build the resilience of ecosystems and meet decarbonisation targets

A3.8 National Policy: Planning Policy Wales (PPW) Edition 11, 2021

PPW guidance in relation to trees, woodlands and hedgerows is set out below and this strategy is the local authority tree strategy referred to in paragraph 6.4.25:

- 6.4.24 *Trees, woodlands, copses and hedgerows are of great importance for biodiversity. They are important connecting habitats for resilient ecological networks and make a valuable wider contribution to landscape character, sense of place, air quality, recreation and local climate moderation. They also play a vital role in tackling climate emergency by locking up carbon, and can provide shade and shelter, a sustainable energy source and building materials. The particular role, siting and design requirements of urban trees in providing health and well-being benefits to communities, now and in the future should be promoted as part of plan making and decision taking.*
- 6.4.25 *Planning authorities should protect trees, hedgerows, groups of trees and areas of woodland where they have ecological value, contribute to the character or amenity of a particular locality, or perform a beneficial and identified green infrastructure function. Planning authorities should consider the importance of native woodland and valued trees, and should have regard, where appropriate, to local authority tree strategies or SPG. Permanent removal of woodland should only be permitted where it would achieve significant and clearly defined public benefits. Where woodland or trees are removed as part of a proposed scheme, developers will be expected to provide compensatory planting.*
- 6.4.26 *Ancient woodland and semi-natural woodlands and individual ancient, veteran and heritage trees are irreplaceable natural resources, and have significant landscape, biodiversity and cultural value. Such trees and woodlands should be afforded protection from development which would result in their loss or deterioration unless there are significant and clearly defined public benefits; this protection should prevent potentially damaging operations and their unnecessary loss. In the case of a site recorded on the Ancient Woodland Inventory, authorities should consider the advice of NRW. Planning authorities should also have regard to the Ancient Tree Inventory.*
- 6.4.27 *The protection and planting of trees and hedgerows should be delivered, where appropriate, through locally specific strategies and policies, through imposing conditions when granting planning permission, and/or by making Tree Preservation Orders (TPOs). They should also be incorporated into Green Infrastructure Assessments and plans.*

A3.9 Technical Advice Note (TAN) 10: Tree Preservation Orders, 1997

TAN 10 supplements PPW and states that TPOs should be considered where provision should be made for the preservation of trees or woodlands in the interest of amenity (para 14). TPOs should be made where the removal of trees and woodlands would have a significant impact on the environment and its enjoyment by the public. TPOs cannot be made on bushes, shrubs or hedgerows (however they can be made on trees within hedgerows).

Local Policy: There are a number of local plans strategies and policies which should be read in conjunction with this Strategy and are signposted below. This Strategy is intended to complement not duplicate the provisions of these documents.

A3.10 Delivering a Successful and Sustainable Swansea: The City and County of Swansea Corporate Plan, 2018/22

This includes a corporate objective: '*Maintaining and enhancing Swansea's Natural Resources and Biodiversity*'. One of the steps listed to implement this objective is to: 'Develop and adopt a Council tree policy' i.e. produce this Strategy.

A3.11 Swansea Local Development Plan (LDP) 2010-2025, Feb 2019

This sets out the Council's policy in relation to the protection of trees from development, the most relevant policy and amplification of which is set out in A3.14. Its main purpose is to prevent the adverse effects of development on trees of public amenity or natural/cultural heritage value or which provide important ecosystem services.

A3.12 Trees Hedgerows and Woodland Supplementary Planning Guidance (SPG), Oct 2021

This SPG supplements the Swansea LDP and provides information on how trees, hedgerows and woodlands are dealt with through the planning system. The SPG relates to all trees, hedgerows and woodland, not just those which are protected. It provides guidance and advice on how to incorporate trees into development, how to secure the retention of trees on development sites and advice on tree and shrub planting. It also includes the Council's tree replacement standards.

A3.13 Swansea Central Area: Regenerating our City for Wellbeing and Wildlife, Feb 2021

Published jointly by Swansea Council and NRW this strategy aims to bring more nature into Swansea City Centre, work towards doubling Green Infrastructure by 2030 and also to increase tree canopy coverage within the City Centre to 20-25% by 2044. Green Infrastructure (GI) is the network of multifunctional green (and blue/water) spaces, corridors and environmental features which surround, thread through, shape and help form the County's settlements and wider countryside. GI is regarded as a single resource to be safeguarded, enhanced and managed to deliver a wide range of environmental, economic and quality of life benefits for the community. A forthcoming Swansea Green Infrastructure Strategy will provide a strategic framework for the protection, accessibility and improvement of existing open spaces and to increase the provision – including tree canopy coverage - where there is currently a deficiency. Under the provisions of an emerging Council Green Fairness Policy, which promotes the concept of Green Health, actions identified to promote green fairness in areas of high deprivation include planting of street trees and trees in open spaces where feasible as part of the provision of a high quality multifunctional GI and natural greenspace.

A3.14 Swansea Local Development Plan Tree Policy

ER 11: TREES, HEDGEROW AND DEVELOPMENT

Development that would adversely affect trees, woodlands and hedgerows of public amenity, or natural/cultural heritage value, or that provide important ecosystem services will not normally be permitted. Ancient Woodland, Ancient Woodland Sites, Ancient and Veteran Trees merit specific protection and development will not normally be permitted that would result in:

- i. Fragmentation or loss of Ancient Woodland;
- ii. The loss of an Ancient or Veteran Tree;
- iii. Ground damage, loss of understorey or ground disturbance to an area of Ancient Woodland or Ancient or Veteran Tree's root protection area;
- iv. A reduction in the area of other semi natural habitats adjoining Ancient Woodland;
- v. Significant alteration to the land use adjoining the Ancient Woodland;
- vi. An increase in the likely exposure of Ancient Woodland, Ancient or Veteran Tree to air, water or light pollution from the surrounding area;
- vii. Alteration of the hydrology in a way that might impact on Ancient Woodland, Ancient or Veteran Trees;
- viii. Destruction of important connecting habitats relating to Ancient Woodland;
- ix. Destruction of Plantations on Ancient Woodland Sites (PAWS); and/or
- x. Development in close proximity to Ancient Woodland and Ancient and Veteran Trees

Where the Council considers it necessary, planning applications for development proposals on sites containing, or adjacent to, trees will be required to provide: a tree survey; an arboricultural impact assessment; an arboricultural method statement; and/or tree protection plan. Where trees are to be replaced a scheme for tree replacement must be agreed prior to the commencement of development, including details of planting and aftercare.

The amplification in support of the policy states:

2.9.67 National Planning Policy and Guidance provides for the protection of trees and woodlands. Throughout the County it is estimated that over 50,000 trees are protected by individual/group orders, area orders or woodland orders. This is in addition to trees in Conservation Areas whilst hedgerows are protected by separate legislation.

- 2.9.68 *In recognition of the importance of trees to the County, the Plan seeks to ensure that suitable trees, whether they are protected by legislation or not, are retained and protected on any development site. Further information relating to the protection of trees on development sites is provided in SPG. NRW i-tree Eco assessment provides useful information on the ecosystem services provided by trees. Where appropriate, planning conditions or Tree Preservation Orders will be used to protect important trees and woodlands. The Council will pursue appropriate enforcement action against unauthorised works to protected trees.*
- 2.9.69 *The circumstances in which further information in support of a planning application will be required are outlined in the policy. These documents must be in accordance with the current British Standard BS5837 and have regard to the long term impact of the proposed development on the trees as they grow and wherever possible seek to avoid future conflict, such as that caused by over-hanging branches, shading and dominance.*
- 2.9.70 *Planning Permission will normally only be granted where the trees on the site are fully protected in the long term, or appropriate replacement trees will be planted when the removal of a tree or trees is unavoidable. The removal of trees would only be acceptable where there is no other alternative location for the development; and the need for and benefits from the development, outweighs the importance of the tree or trees.*
- 2.9.71. *Replacement trees will be planted in accordance with British Standard BS8545. Tree Preservation Orders (TPOs) will normally be placed on the replacement trees.*
- 2.9.72 *Planning Conditions, Article 4 Directions and/or Planning Obligations will be used to secure any necessary mitigation/compensation/enhancement measures in relation to trees and development proposals.*
- 2.9.73 *New tree or mitigation planting will be designed to achieve maturity and to ensure that there is an ongoing contribution to amenity with negligible negative impacts. New landscape schemes will follow the principles set out in “Trees in the Townscape: A Guide for Decision Makers and be delivered using guidance in “Trees in Hard Landscapes: A Guide for Delivery”.*

- 2.9.74 *Ancient Woodland is defined as land that has had a continuous woodland cover since accurate maps were first produced. It is a valuable and irreplaceable resource having been present in the landscape over some time Ancient Woodland is rich in wildlife and more likely to support protected and priority species and to contain special features of importance for biodiversity. It is also more likely to contain features of historical and archaeological importance. Their rarity and importance means that these areas should be protected. Direct loss of ancient woodland must be avoided. A minimum buffer of 15 metres should be provided between Ancient Woodland and most forms of development. This is necessary to provide essential root and understorey protection (as required in BS5837:2012) and to protect the important Ancient Woodland habitat from indirect damage, such as trampling, fly-tipping, encroachment of invasive features and vegetation clearance resulting from the new development. Ideally, the buffer should be planted with woodland edge species or left as natural grass to increase or maintain ecological connectivity and create a transitional habitat i.e. an ecotone providing resilience for this sensitive and highly valued habitat. Where possible opportunities should be taken to restore plantations on Ancient Woodland sites to native tree cover. Plantations on ancient woodlands (PAWS) are sites believed to have been continuously wooded for over 400 years, but currently have a canopy cover of at least 50% non-native conifer tree species. Critically, such areas support Ancient Woodland soil systems and have the potential to be restored to an Ancient Woodland habitat.*
- 2.9.75 *All areas of Ancient Woodland known at the time of the Plan's preparation are shown on the Constraints Map. However this is only a provisional list and all development sites that support woodland will need to be assessed for Ancient Woodland status. NRW will be consulted on any proposals that may give rise to potentially damaging operations.*
- 2.9.76 *An Ancient Tree is one that has passed beyond maturity and is old or aged. A Veteran Tree may not be old but because of its environment or life experiences has developed the valuable features of an Ancient Tree. Ancient and Veteran Trees are of prime importance because of their rarity and function within an ecosystem. Individual Ancient and Veteran Trees often have local or national significance, due to their age, size or condition. They are also of importance to sustain a range of nationally and internationally protected species. In order to provide the necessary protection a buffer of 15x the diameter of the stem of Ancient and Veteran Trees when measuring at 1.5m from ground level will be required for most forms of development, as endorsed by the Arboricultural Association*
- 2.9.77 *There is currently no comprehensive inventory of Ancient and Veteran Trees within Wales. The required tree survey in support of development proposals will detail whether a site contains or is adjacent to any trees which could be considered to be Ancient or Veteran.*

A4 Benefits of Trees

Swansea is one of the greenest cities in Wales, as identified through the i-Tree Eco, Tawe Catchment Study Area (2016). However, it was found to have a low proportion of large trees compared to previous studies conducted in the UK, and would benefit from more medium and large sized trees. The study revealed more trees could be planted, as there is up to 24% of urban space available within the catchment area to plant trees or shrubs.

A4.1 Financial

A4.1.1 The 530,000 trees in the Tawe Catchment Study Area alone are estimated to be worth £1.72 million per annum to the local economy. Trees in the Tawe catchment:

- Intercept an estimated 252 million litres of water every year, equivalent to an estimated £333,900 in sewerage charges avoided
- Remove an estimated 136 tonnes of airborne pollutants each year, worth more than £715,500 in damage costs
- Remove an estimated 3,000 tonnes of carbon from the atmosphere each year (this amount of carbon is estimated to be worth £671,000), and store an estimated 102,000 tonnes of carbon estimated to be worth £23.1 million
- Have a replacement value of £234 million
- Have an asset value of £816 million - an evaluation based on public amenity

A4.2 Economic

A4.2.1 Trees bring substantial economic benefits to an area, with studies showing that they:

- Increase property values by 5-18%, and this growth increases proportionately with the tree growth ^{1 2 3 4}
- Make development sites more valuable when they are set within mature landscapes ³
- Create a positive perception of 'place' for potential property buyers, be it home owners or commercial investors
- Improve the health and well-being of local populations within urban areas, reducing healthcare costs ⁶
- Contribute to retail areas performing better - people are more productive, with job satisfaction increased. Customers are prepared to pay more for parking and goods (9-12% for some products) in landscaped shopping areas
- Improve the environmental performance of buildings by reducing heating and cooling costs, thereby cutting bills
- Provide a potential long-term renewable energy resource ⁷
- Provide a cost-effective and sustainable alternative to 'grey' infrastructure provision in tackling storm-water run-off

- Reduce, through shading, the degradation of tarmac surfacing and frequency of replacement
- Reduce green space maintenance costs
- Add to tourism and recreational revenue
- Can enhance the prospect of securing planning permission if existing trees are protected and the new tree-planting design is imaginative

A4.3 Social/ Cultural

A4.3.1 Trees also have significant social and cultural benefits as they:

- Create a sense of place and local identity
- Provide focal points and landmarks
- Can increase pride and social cohesion in the local area ^{8 9 10}
- Have a positive impact on crime reduction ^{11 12}
- Promote spiritual well-being, due to their stature, strength, and endurance, e.g. putting people in touch with nature and reducing depression and anxiety
- Provide a source of recreation, entertainment and quiet enjoyment, offering opportunities to unwind and de-stress, and provide families with a pleasant environment within which to spend quality time together
- Have a positive impact on people's physical and mental health, e.g. less skin cancer and improve patient recovery times. Studies show that children living in areas with more street trees have lower prevalence of asthma
- Encourage exercise that can counteract heart disease and Type 2 diabetes
- Offer a rich outdoor learning classroom for all, especially when part of a natural wooded environment.
- Help children concentrate at school where they can be seen from the classroom
- Give a link to heritage

A4.4 Environmental

A4.4.1 Trees deliver considerable environment benefits as they:

- Remove carbon dioxide to create a carbon sink, i.e. help tackle climate change by trapping carbon^{3 5}
- Transpire, reflect sunlight and provide shade, in combination to reduce the 'urban heat-island effect' making streets and buildings cooler in summer ¹³
- Remove dust and particulates from the air ^{14 15 16}

- Reduce traffic noise by absorbing/deflecting sound
- Reduce wind speeds
- Provide food and shelter for wildlife thus helping to increase biodiversity^{17 18 19 20 21 22 23 24}
- Create new habitat links across towns and to the countryside, and strengthen existing wildlife corridors
- Create attractive greener landscapes/hide eyesores
- Reduce the effects of flash flooding by slowing the rate at which rainfall reaches the ground²⁵
- Help to improve soil quality when planted on despoiled and degraded ground
- Create organic matter on the soil surface from their leaf litter and, with their roots increasing soil permeability that results in:
 - Reduced surface water run-off from storms (every 5% increase in tree cover reduces run off by 2%)
 - Reduced rainwater soil erosion and sedimentation of streams
 - Increased ground water re-entry that is otherwise significantly reduced by paving
 - Lesser amounts of chemicals transported to streams
 - Reduced wind erosion of soil

Annex: Background Information

A5: Working Practices

This annex provides amplification to the protocols included in the strategy and current working practices.

A5.1 Duty of Care

- i) If a tree falls or causes injury or damage its owner could be held liable if they omitted to take sufficient care of the tree. Trees are a potential liability and Swansea Council as a responsible landowner, has a duty of care under Health and Safety Executive (HSE) Regulations to ensure that all of the trees on its land are kept in an acceptable condition and do not put persons and property at unreasonable risk.
- ii) The Occupiers Liability Act 1957 and 1984 puts on occupiers of land a duty of care to all visitors and/or trespassers. The Act requires the Council as a landowner and occupier to take reasonable care to maintain its land in such a condition that it does not harm any person or damage any property.
- iii) Under the provisions of the Health & Safety at Work Act, 1974 and the Management of Health and Safety at Work Regulations, 1999 failure to comply with this legislation could lead to the HSE taking criminal action against the Council. Section 3 of the Act places a duty on the Council to take reasonable care for the health and safety of third parties. The Regulations effectively require the Council to have an adequate tree management system to ensure Health and Safety.
- iv) The need for Councils to carry out tree surveys has been established for some time. Government guidance in the form of Circulars 90/73 and 52/75 requires Local Authorities to regularly inspect trees adjacent to Highways. Additional guidance on tree risk has been published by the National Tree Safety Group, 2011: "Common sense risk management of trees - Guidance on trees and public safety in the UK for owners, managers and advisers".
[http://www.forestry.gov.uk/PDF/FCMS024.pdf/\\$FILE/FCMS024.pdf](http://www.forestry.gov.uk/PDF/FCMS024.pdf/$FILE/FCMS024.pdf)
- v) Since October 2018, Highway Authorities have also needed to manage their tree inspection following guidance from Well-managed Highway Infrastructure, 2016 published by the UK Roads Liaison Group (UKRLG). Well-managed Highway Infrastructure sets out strategic guidance on tree inspections and training.

A5.2 Responsibilities

The responsibility for health and safety lies ultimately with the Council's Chief Executive Officer. However, the site or area managers are responsible for day to day compliance with tree legislation.

A5.3 Management/ Inspection

- i) A management/inspection regime enables the Council to meet its duty of care under the provisions of the Health and Safety at Work Act (HSAW) 1974, Management of Health and Safety at Work Regulations 1999 and the Occupiers Liability Act 1957 & 1984 in relation to tree risk.
- ii) There is however a potential conflict between the Council's conservation role and its obligations under the HSAW Act. Many of the Council managed sites have TPO, Conservation Area and SSSI status; they also provide habitat for several species of bat, dormouse, otter, badger, birds and rare flora such as lichens. Accordingly, tree risk assessments are undertaken following a risk benefit analysis approach whereby the ecological and aesthetic benefits of a tree are also be considered.
- iii) The management/inspection regime is carried out by the Council's Tree Services Unit. The Unit forms part of the Parks Service in-house contractor who were historically solely responsible for the tree stock within the control of the Regeneration Department's portfolio. This responsibility has been extended to cover inspection of trees adjacent to the Highway and on Highways land. Other Council departments such as Housing, Cemeteries and Schools arrange for ongoing tree risk assessments by the Tree Services Unit.
- iv) Departments responsible for land not listed above will need to arrange for suitable tree inspection to be carried out by the Tree Services Unit or Private Consultants.

A5.4 Tree Management System

- i) To assist with the management of the tree stock and to meet the Council's duty of care, a tree management system has been in operation since 2012 (Ezytreev). Council owned trees are inspected for safety and information recorded on Ezytreev. This information includes details on species, age, condition, proximity to structures and any recommendations for work. The Council employs suitably qualified inspectors (ideally a minimum of QCF Level 2 qualification and LANTRA Professional Tree Inspection) experienced in arboriculture (the care and management of amenity trees) to carry out the tree inspections and any work arising from them.

- ii) Due to the volume of the Council's tree stock, interim inspections by Level 1 inspectors will be required to supplement the formal inspections by Level 2 qualified staff.
- iii) At present the assessed risk from trees is defect led (based on tree defects found during the surveys). Where trees with significant defects are being considered for retention a Quantified Tree Risk Assessment (QTRA) will be carried out to aid management proposals. A recognised risk assessment system such as QTRA allows risks to be suitably prioritised and enables trees to be retained where there is only a low risk to the public.

A5.5 Site Specific Assessment

- i) It is an objective of the Strategy that each Council owned site will in due course have a site-specific assessment (Tree Risk Document) which will include where appropriate:
 - Details of responsible site manager
 - Site use / description of tree stock
 - Specified tree inspection frequency
 - Interim survey procedure (when and by whom)
 - Details of basic tree inspection training either delivered in house or externally:
<https://www.lantra.co.uk/awards/product/lantra-awards-technical-award-basic-tree-survey-and-inspection>
 - Reporting procedure and hierarchy for observed hazards
 - Adverse weather procedure (closure, tree checking following extreme weather). Adverse weather will be considered wind speed in excess of 47mph, force nine on the Beaufort scale, strong gale.
 - Log of tree defects

A5.6 Survey Zones

- i) Surveys are carried out with a mix of zones and cycles (see table below) to allow effective use of resources and to inform the frequency and type of survey to be used. The zones and cycles will be set up and reviewed by the Tree Services Unit and responsible site managers.

Target & Occupancy,	Description	Minimum Inspection Regime
Risk Zone 1. Very High Target Occupancy (Constant use)	A-roads with large trees, town centre, very large or very old trees in lower risk areas, heavily used play areas and show grounds, monitored trees	Inspected every year and reactively by Level 2. Walk through surveys recording individual trees on Ezytreev
Risk Zone 2. High Target Occupancy (Frequent use)	A-roads with smaller trees, schools, monitored trees	Inspected every 2 years and reactively by Level 2. Walk through surveys recording individual trees on Ezytreev
Risk Zone 3. Medium Target Occupancy (Intermittent use)	B-roads, housing land, housing gardens, social services sites, cemeteries	Inspected every 3 years and reactively by Level 2. Walk through surveys recording individual trees on Ezytreev
Risk Zone 4. Low Target Occupancy (occasional use)	C-roads, woodlands, cycle paths, Parks, lower use play areas	Inspected every 4 years and reactively by Level 2. Walk through surveys recording individual trees and groups on Ezytreev
Risk Zone 5. Very Low Target Occupancy (very low use)	Often rural locations such as the outmost edges of large open spaces/reclamation sites and / or with young/small trees.	No formal inspection, inspected reactively. Negative reporting (using Ezytreev).

- ii) Individual trees or areas that are surveyed through years 2-4 can be moved up or down the inspection levels depending on the findings of the surveyor or new information that comes to light.
- iii) In the event of a catastrophic event such as the 1987 storm where large numbers of trees are windthrown or damaged they will be attended to in the following priority order:
 - a) Main arterial routes including links to hospitals, fire stations, City Centre, etc
 - b) Other A roads, town centres
 - c) Schools, other public buildings
 - d) B roads
 - e) All other roads
 - f) Parks

A5.7 Competence of Inspectors

There are three categories of Inspectors:

- i. **Generalist Level 1** – A lay person with no specialist tree knowledge who has received training (National Training Organization for the Land Based Industries - LANTRA Basic Tree Inspection or in house) to observe and identify potential hazards to inform risk control decision, including recommending inspection by expert (Level 2 or 3).
- ii. **Competent Level 2** - An individual 'who has sufficient training, expertise and/or qualifications to identify tree hazards, assess the levels of risk and make appropriate management recommendations'. (Minimum Level 3 Arboricultural qualification, LANTRA Professional Tree Inspection and two years' relevant experience).
- iii. **Expert Level 3** – An individual 'with the highest skills and knowledge'.

A5.8 Types of inspection

Type	Description	Level of Inspector
Interim	Between formal tree inspections and after extreme weather events	Level 1

Drive by	Survey from moving vehicle to note obvious defects. One side of road observed by a passenger at 15mph with only trees being the subject of the inspection.	Level 1
Walk through	Survey of all trees from ground with defective trees noted for detailed inspection	Trained level 2 Inspectors
Detailed inspections	Inspection of individual trees in response to defects noted at a previous survey	Trained level 2 Inspectors or above
Specialist inspections	Inspection using specialist equipment such as resistograph / increment borer or Picus, to add to the detailed survey	Arboriculturist with experience of using the equipment Level 3

A5.9 Remedial work

- i) Required mitigation work for identified hazards found during base line or annual surveys will be discussed and agreed between the inspector, site manager and any other relevant site advisor (e.g. Tree Officer (Planning) / Ecologist). Any discussion will explore the tangible benefits of the tree and inform the final management decision. Where there is a high habitat/ecological benefit any possibility of moving the target (e.g. moving a path / bench) will be preferred. Where the hazard cannot be reconciled by removing the target, tree work will be prescribed with the least negative impact possible.
- ii) Mitigation work will be given the following time scales, subject to budget availability and Ezytreev recording:
 - a. Urgent : Immediate (exclusion of people from an area may be appropriate pending urgent work)
 - b. Essential: within 1 Year
 - c. Desirable: At the discretion of the site manager
 - d. No work required

A6: Ash Die Back Guidance

A6.1 Ash dieback is a fungal disease that affects all species of ash trees (*Fraxinus*). The disease has spread west across the country and is now affecting almost all parts of Wales. It is estimated that around 90% of ash trees will be killed by ash die back. The trees become brittle over time with branches breaking away from the main body of the tree. If they are not dealt with, the trees are at risk of collapsing, presenting an immediate danger to the surrounding area.

- A6.2 Swansea Council has put a system in place to manage the risk from trees infected by the disease. A programme of ash tree inspection and removal is underway and will take a number of years to complete. There are thousands of ash trees in Swansea and the only way to remove the risk posed by badly affected trees is to fell them. The decision to fell a tree will only be taken where it is strictly necessary and a risk has been identified. The focus will be trees on public land where there is the greatest danger of hurting people or damaging property – parks, schools, roadsides, etc. At times, the level of risk may not be immediately apparent, but all officers making a decision on the health of the tree are suitably qualified to make this assessment. This does not include the removal of healthy trees, nor the removal of infected trees where there is no risk to the public. Further detail can be found on the Council's [Ash dieback webpage](#).
- A6.3 The Council has developed an ash die back action plan following guidance in the Tree Council's Ash Die Back Toolkit document. The Council's Tree Services Unit will continue with their scheduled inspections but have already inspected Schools, Cemeteries, Highways verges, Social Services property, and community centres for ash die back specifically. Ash trees have been/will be assessed and given a category in accordance with the Ash Die Back Tool Kit. All trees in category 4 will be felled as soon as possible with category 3 trees felled in the most cost effective manner. The Action Plan cross cuts all Council Departments and infected ash will be removed where required. It is acknowledged that infected ash trees (and any other trees with defects) are not necessarily always a risk to the public. Trees at risk of failure but in inaccessible or low access areas will not always be removed so that resources can be directed to where risk is greater.
- A6.4 Some ash trees show good levels of resistance to the disease and should not be considered for removal. These trees are very important for the ecological value they retain in the environment and may help repopulate the species in the future.

Managing Ash Die Back for Biodiversity

- A6.5 The widespread loss of Ash trees will result in loss of habitat for many other species, including a number of invertebrates, lichens and mosses which are wholly reliant on Ash and considered to be at significant risk from its loss from the landscape. Furthermore, there are a number of vascular plants which are closely associated with ash woodland and likely to be impacted by the loss of Ash from those habitats.
- A6.6 Following the measures outlined in protocol TW1 of the Council's Tree Management Strategy will help increase the resilience of the local natural environment and help mitigate against the loss of species reliant on Ash species for their survival. Managing the long-term impact of the loss of Ash as a key woodland species will require further consideration. This should include the retention of Ash where possible (to encourage the regeneration of naturally resistant trees) and restocking with a

diverse range of native trees, appropriate to the local area, with a view to maximising opportunities for ash associated species. The Forest Research Note on [Ecological Impacts of ash dieback and mitigation methods](#) provides a detailed account of the ecological value of Ash and outlines good woodland management methods to maintain woodland biodiversity.

A6.7 Further information can be found on the [Arboricultural Association](#) website. Any assessment should include consideration of whether there is a risk to people and whether that risk can be removed by limiting access to the area, an approach taken by the [Wildlife Trust of South and West Wales](#).

Relevant Legislation and Permissions

A6.8 Management of trees with Ash dieback still require that the necessary permissions are in place before work is carried out. This includes:

a) TPOs: To check whether trees are covered by a TPO or fall within a Conservation Area, see [Tree Preservation Orders or contact Protected Trees on Protectedtrees@swansea.gov.uk](#).

b) Felling Licence: To check whether a felling licence is required contact Natural Resources Wales

c) Biodiversity Protection

A6.9 It should be stressed that biodiversity legislation must continue to be complied with whilst dealing with Ash dieback, and species consideration must be taken when planning felling works, particularly for protected and priority species. This will allow time for licence requirements to be met and for work to be planned for the right time of year.

A6.10 Furthermore, under Section 6 of the Environment (Wales) Act, 2016, public bodies in Wales have a statutory duty to maintain and enhance biodiversity and promote the resilience of ecosystems in the exercise of their functions. This would not prohibit the removal of Ash trees where there is a safety concern, however it does place a requirement for public bodies to adopt measures to minimise the impact on biodiversity wherever possible.

A7: Swansea Tree Replacement Standard

A7.1 The following is extracted from Trees, Hedgerows and Woodlands Supplementary Planning Guidance adopted October 2021. For further details and explanations see <https://www.swansea.gov.uk/treespg>. Under legislation it is only applicable to development requiring planning permission, however other Council projects and proposals are expected to aspire to this standard as appropriate.

What is the Tree Replacement Standard (TRS)?

A.1 The Swansea TRS supports the Council and the Applicant in the process of agreeing a Tree Replacement Scheme, to mitigate or compensate for the loss of individual and/or groups of Category A and/or B trees (as identified in a BS 5837:2012 Survey) as a result of development. This applies to both trees within and adjacent to the site.

A.2 The TRS does not apply to Category C or U trees; or trees of any category located within privately owned gardens.

A.3 TRS and Woodland: Where woodland is removed to facilitate a planning consent, the Council will have specific regard to the number of Category A or B trees identified in the BS Survey as being within the woodland area to be lost. It is important to note that application of the TRS does not substitute any requirement to undertake relevant parallel processes to establish appropriate integration, mitigation or compensation with regard to impact on the ecological, historic or archaeological value of the whole woodland proposed to be removed.

How to apply the TRS

A.4 Figure A.1 of the TRS provides a transparent method to calculate the number of replacement trees to be provided. The method seeks to mitigate the impact of loss of canopy cover, and not simply the number of tree stems lost.

A.5 The TRS will be expected, in the first instance, to demonstrate how replacement trees will be integrated into design and layout of the proposal.

A.6 In the exceptional circumstances where on-site provision cannot be achieved, Figures A.2 and A.3 of the TRS provide a transparent calculation of the financial contribution to be agreed, in order to secure the planting of appropriate off site replacement trees. The financial contribution will be used by the Council, to fund the planting of trees (by the Council or its contractors) to replace trees on Council owned land outside the boundary of the development site. The calculations reflect the differing costs of planting trees in open ground (Fig.A.2) and planting trees in hard standing (Fig.A.3).

A.7 Figure A.4 gives a worked/hypothetical example of how the TRS should be applied.

A.8 Applicants will be expected to demonstrate how the TRS has been applied to their proposal by submitting information that addresses the following:

- The relevant calculations undertaken, to be completed in accordance with the method at Figure A.1. All calculations will reflect information related to the trees on or adjacent to the site provided in a BS 5837:2012 Tree Survey.
- The number, location and specification of replacement trees to be provided on-site (as per Fig A.1).
- The number of, and justification for any trees which must be provided off-site.

The proposed species of replacement trees, which should include large growing species (where appropriate), and where replacement is on site should be chosen as part of the design layout

A.9 All calculations and information relating to the TRS should be provided within the appropriate documents supporting the application. For example within the DAS, or for larger applications, within a Landscaping Scheme, or Green Infrastructure Strategy.

Calculating the number of replacement trees required

A.10 Figure A.1 provides the method by which the number of replacement trees required should be calculated. This method applies to both replacement of Category A and/or B trees on and off site.

Figure A.1: Tree Replacement Calculation

<i>Trunk Diameter of Category A and/or B Trees lost to development (measured in centimetres at 1.5 meters above ground level)</i>	<i>Number of Replacement Trees to be provided</i>
<i>Less than 15cm</i>	<i>0 - 1</i>
<i>15 - 19.9cm</i>	<i>1</i>
<i>20 - 29.9cm</i>	<i>2</i>
<i>30 - 39.9cm</i>	<i>3</i>
<i>40 - 49.9cm</i>	<i>4</i>
<i>50 - 59.9cm</i>	<i>5</i>
<i>60 - 69.9cm</i>	<i>6</i>

70 - 79.9cm	7
80+cm	8

Replacement Tree Planting – Off-Site

A.11 Where it has been demonstrated that replacement cannot be achieved on site, or where removal of trees adjacent the site is required to facilitate development – the Council will request a financial contribution to secure the planting of an appropriate number of trees on council owned land. The number of trees required will be calculated in accordance with Figure A.1 above.

Trigger for Obligations for Financial Contributions

A.12 The obligation to provide financial contributions to off-site replacement tree planting will only be triggered:

- Where trees qualify under categories A and B of BS 5837:2012, are felled as part of ‘major development’, and replacement planting is required on public land. OR
- Where woodland is removed to facilitate a planning consent. In this instance appropriate compensatory replacement planting will be based on significant trees identified in the BS survey. NB: The effects of the loss of the woodland as a whole will expected to be considered as a separate process where mitigation for loss of biodiversity should be the primary consideration.

Location of Tree Planting

A.13 All tree planting will be located on public land and undertaken by the Council in order to ensure a consistent approach and level of quality, and to reduce the likelihood of new tree stock failing to survive.

A.14 Replacement tree planting will take place either on open ground; or in areas of hard standing, such as pavements (where a tree pit will be required)

Calculating Level of Financial Contribution

A.15 The number of trees calculated as required (as per Fig A.1) are multiplied by the rates of financial contribution per tree as per Fig A.2 (re trees in open ground) and/or Fig A.3 (re trees in hard standing). A worked example is provided at Fig A.4.

A.16 The contribution covers the cost of providing the tree pit (where appropriate), purchasing, planting, protecting, establishing and initially maintaining the; new tree. Where planting can take place directly into open ground, the contribution will be lower than where the planting is in areas of hard standing. This is due to the need to plant trees located in areas of hard standing in an engineered tree pit.

A.17 The figures provided at Figures A.2 and A.3 below are an estimate based upon the Council’s recent contract costs. These figures provide a starting point for the purposes of establishing site viability and may be the subject of viability negotiations where appropriate. Individual sums will be index linked using RPI from the date they are formally agreed by the relevant parties to the date of payment.

Figure A.2: Replacement Costs for Trees in Open Ground (no tree pit required)

Amount	Criteria
<p>For 1 Replacement Tree: £1925</p> <p>For 5+ Replacement Trees – a reduction applies of -£625</p>	<p>The “open ground” figure will apply in the following circumstances:</p> <p>a) Where development results in the loss of Category A and B, Council owned trees in open ground.</p> <p>b) Where development results in the loss of Category A and B trees on the development site, AND is unable to provide replacement tree planting on site, in numbers shown in Figure A.1.</p> <p>In both these cases the Council will provide replacement tree planting in the nearest appropriate area of open space.</p>

Figure A.3: Replacement Costs for Trees in Hard Standing (tree pit required)

Amount	Criteria
For 1 Replacement Tree: £3725	<p>The “hard standing” figure will apply in the following circumstances:</p> <p>a) Where development results in the loss of Category A and B Council owned trees in areas of hard standing. In this case, the Council will locate replacement tree planting in areas of hard standing as close as reasonably practical to the development site.</p> <p>b) Where new tree planting in hard standing is required to mitigate for the impact of development (for example removal of street trees required as part of highway improvements). In this case, the Council will implement tree planting in specific locations identified through the planning approval process.</p>
For 5+ Replacement Trees – a reduction applies of -£625	

Fig A.4 Worked Example: The following is a hypothetical example:

A development proposal results in the loss of 2 Council owned Trees in Hardstanding which have trunk diameters of 27cm and 33cm respectively. No trees in open ground are lost.

On the basis of the “Tree Replacement Calculation” at Figure A.1:

The tree with the 27cm trunk will require 2 replacement trees, and
 The tree with the 33 cm trunk will require 3 replacement trees.

The obligation will require the provision of a total of 5 replacement street trees (trees in hard standing). The “hard standing” figure of £3,318.88 per tree will apply (as per Figure A.3) Therefore the contribution will be:

No. of Replacement Trees (Figure A.1)	x £ Contribution per Tree	= Total Contribution
5	x £3,318.88	= £16,594.40

A8: Tree Planting Checklist and Protocol (Right Tree in the Right Place for the Right Reason)

A8.1 Planting trees has many benefits, such as helping wildlife, providing shade, reducing pollution and noise levels as well as creating an attractive environment. The Council has staff who have the necessary knowledge and skills, and who are working to increase tree canopy in suitable locations. Anyone internal or external to the Council with sites in mind for planting should contact Parks or the Nature Conservation Team in the first instance.

A8.2 There are many considerations when finding the right place to plant trees, some are obvious whilst others are less so, as outlined below:

- **Soil:** The soil can be acidic, alkaline, compacted and/or polluted, so the tree has to be able to survive the soil it is planted in.
- **Wet or dry:** Species need to be carefully selected to suit the site condition.
- **Single species planting:** Avoid planting large numbers of the same species. If there is a disease such as ash die back then all of the trees in that location will be affected.
- **Shade or sunny:** Trees need light to grow, but some more than others. Species need to be carefully selected to suit site conditions.
- **Exposure:** Most trees will not grow on a windy open hill top and a coastal site may have too much salt in the air.
- **Habitat and species:** Other habitats and species are valuable in their own right and may be protected by legislation. So, for example, planting in heathland or where orchids grow should not be carried out. Some species/habitats are only visible at certain times of the year so their presence may not be immediately apparent.
- **No trees:** If a site currently has no trees on it, then it is possible that the ground is not suitable for planting. For example, it could be too polluted or compacted or have another use.
- **Service:** Underground and over-ground services such as cables, pipelines and pylons can restrict planting opportunities. For example, deep rooted trees cannot be planted over a gas main and trees that grow tall cannot be planted under pylons.
- **Nuisance:** People do complain about trees for many reasons, including leaves blocking gutters and being a slip hazard, blossom (e.g. cherry) sticking to cars making cleaning difficult, sap (from aphids) damaging cars and attracting wasps. People also 'worry' that a tree might fall over and cause damage. Consultation with local residents is essential before considering any planting scheme.
- **Anti-social behaviour:** This includes fruit/nuts being thrown at property, cars and people, groups congregating under a tree, fruit being taken without permission (trespass). Trees can be a source of hiding place for undesirable activities and damage/vandalism can also occur to existing trees and those newly planted (stakes and fencing as well as the trees).

- **Property Damage:** Roots can damage property if planted too close, as can falling branches and trees themselves. Trees can also 'dry' out previously wet ground leading to soil cracking and subsidence.
- **Common complaints.** Often linked to tree damage/vandalism, this includes causing too much shade, shade encouraging growth of algae, blocking views, loss of light (there is no right to light), producing pollen causing hay fever, seeds growing in gardens, bird mess, noisy roosting birds and interfering with TV signal.
- **Existing land use:** Land may be used for grazing for example and trees will reduce the area available for stock to feed. Avoid planting in locations where there is an existing deficiency in open space provision for recreational purposes.
- **Future land use:** There may be plans in place for the future of the site which would mean the trees would have to be removed at a later date e.g. planning permission for housing. Planting should only be undertaken where long-term benefits can be delivered.
- **Future management:** Until newly planted trees become established there will be ongoing maintenance costs. Funding for planting trees also needs to make provision for these costs and establish who will look after planted trees in the future, replace failed trees and keep the height to an agreed limit.
- **Access:** Many footpaths have a legal status and must be kept clear of newly planted trees. Permissive paths should also be left unplanted.
- **Ownership:** Landowners permission is needed before any tree planting can be carried out.
- **Archaeological interest:** Some sites have archaeological interest. Consultation should be undertaken with experts to ensure that archaeological interest is not impacted by planting. In Swansea the contact is the Glamorgan Gwent Archaeological Trust (GGAT).
- **Geological interest:** Sites of importance in geological terms may be adversely impacted by planting.
- **Historic interest:** Landscaped Gardens, Conservation Areas, Historic Parks and Common Land may all have restrictions on tree planting. Also need to consider whether the land a registered Village Green.
- **Connectivity:** Reconnecting fragmented habitats helps to restore biodiversity
- **Adjacent/nearby sites of importance for wildlife:** The value of some wildlife-rich sites can be impacted by tree planting even if it is not directly on that site, for example, seeds could spread and germinate on a grassland. Where there is a highly protected/designated site nearby consultation should be carried out with the experts caring for those sites to ensure that its value won't be affected by proposals.

Swansea Council - Tree Planting Protocol and Consultation Process Flowchart

Report Summary

Site Overview: ***Description of site and context***

Proposal: ***Outline what is the purpose of planting a tree here, what is it that are we trying to gain? For example, to help alleviate flooding / surface water run-off, improve water quality, carbon sequestration, create microclimates to deal with summer cooling, wind break etc? Consider is this the right tree in the right place? i.e. connectivity, climate change, ecosystem resilience. Is it an area of high deprivation?***

Main constraints: ***From site assessment***

Justification for planting: ***Conclusions drawn from above***

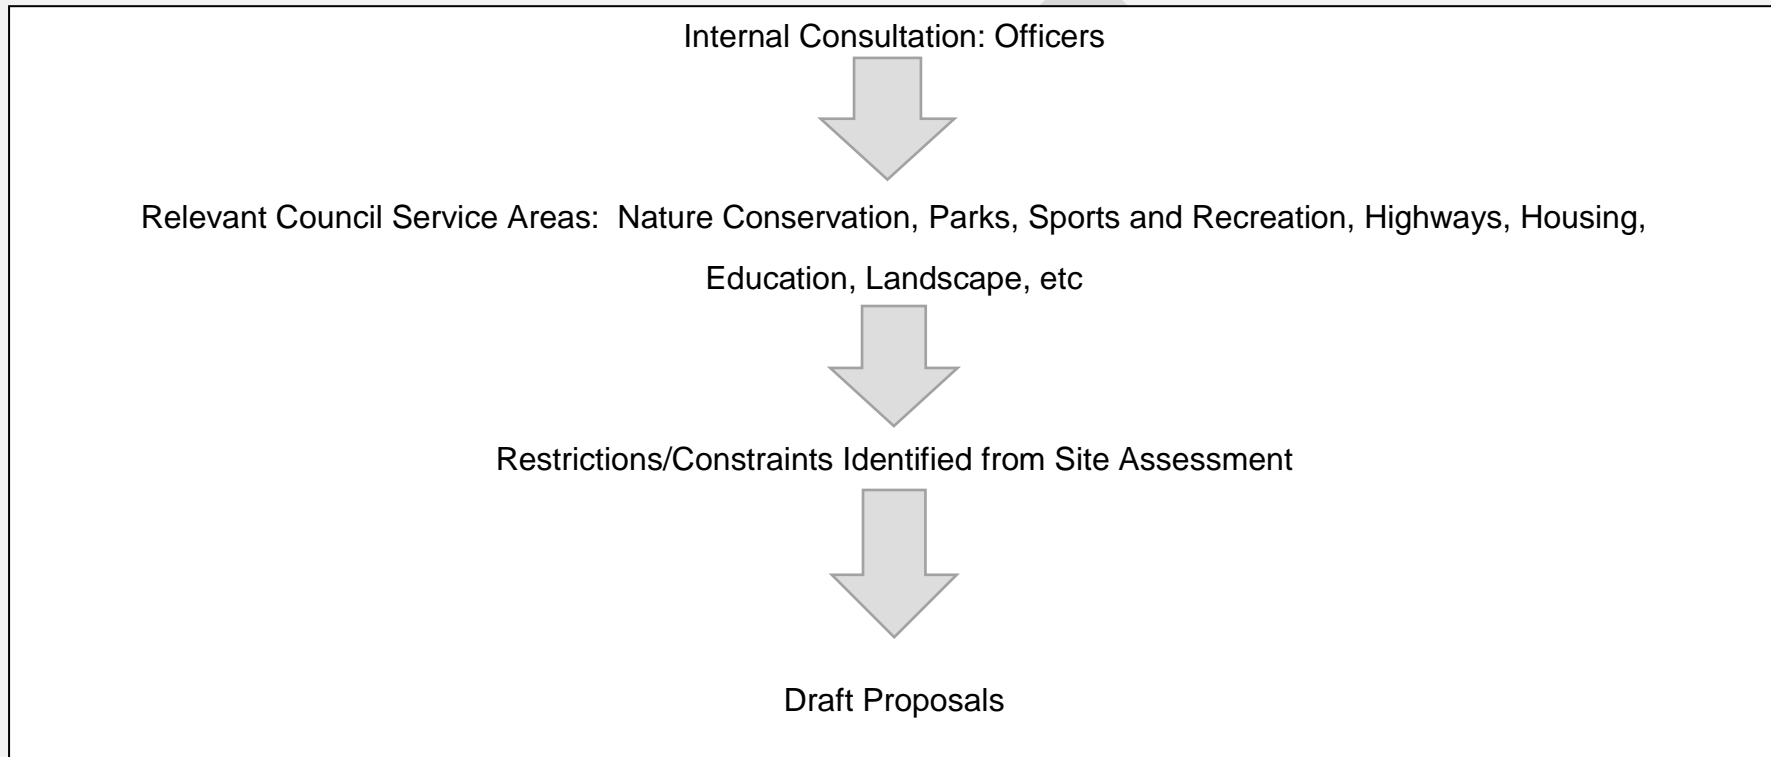

Site Assessment

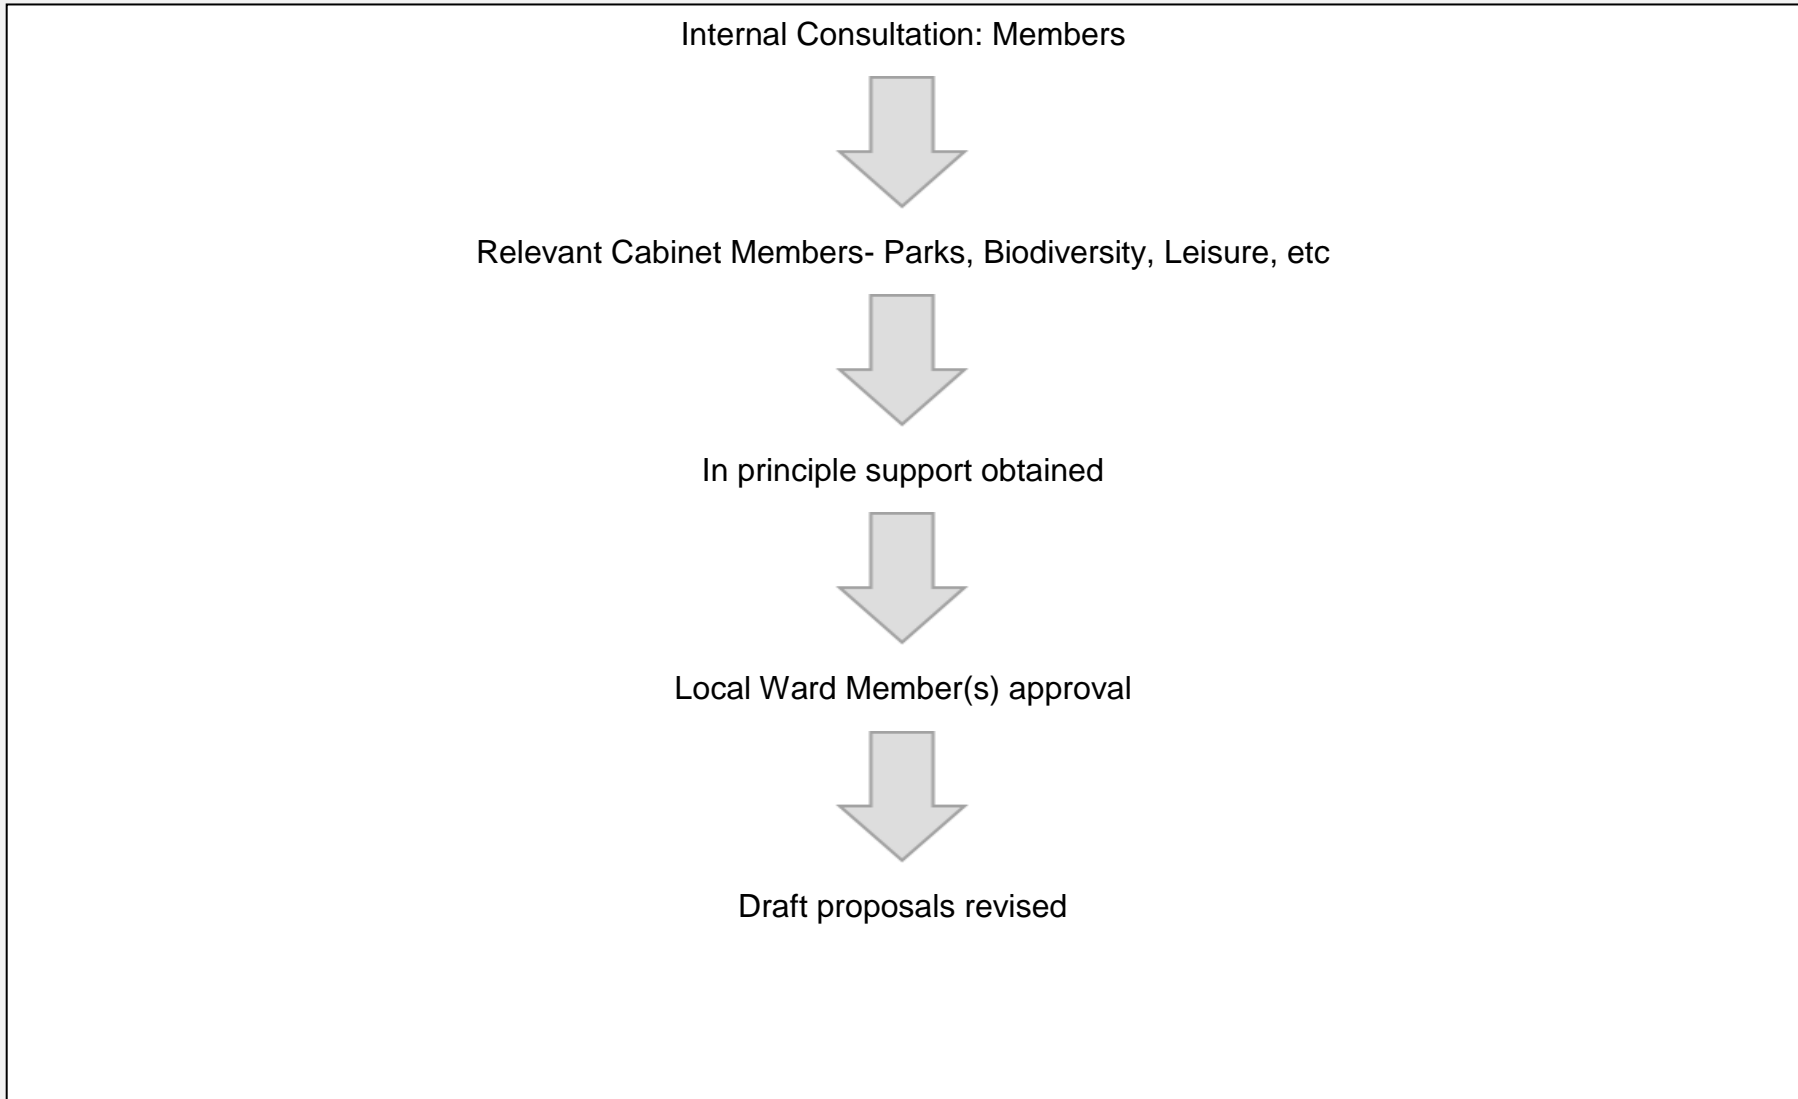

Check	Outcome	Comments
Soil - Condition/Type		
Ground - Wet/Dry		
Exposure – wind		
Exposure – sun/shade		
Other trees nearby		

Nearby trees lost to disease, age class etc		
Trees likely to cause disturbance i.e. root damage, branch overhang, block light/view, leaf litter - blockages/slip hazards, blossom/hay fever)		
Ecology of area - Priority or other habitat - Species - Constraints		
Ecological connectivity - Existing - Potential		
Nearby designated sites - SSSI - SINC		
Justification of selected tree species		
INNS in area		
Green/Blue Infrastructure - Connectivity - Nearby GI assets - Issues to be tackled with GI (AQ, NFM) - Proximity to water body (blockages, WQ etc)		
Future potential GI scheme in area		

Future land use Potential development area?		
Underground/Overground Services – water, gas, electric, internet		
Traffic impeding		
Site accessibility		
Landowner consent		
Heritage, Geological, Archaeological Interest. CADW consent		
WIMD – area of deprivation		
Anti-social behaviour		
Partnership collaboration		
FOG/Voluntary group		
Nearby school		
Planting method (contractors, volunteers, in-house etc.)		
Current maintenance of area		
Establishment assistance (i.e. mulching, watering etc.)		
Future maintenance & monitoring		
Grant criteria met		

Consultation Process Flowchart

Final Design produced

Integrated Impact Assessment Screening Form

Please ensure that you refer to the Screening Form Guidance while completing this form.

Which service area and directorate are you from?

Service Area: Planning and City Regeneration

Directorate: Place

Q1 (a) What are you screening for relevance?

- New and revised policies, practices or procedures
- Service review, re-organisation or service changes/reductions, which affect the wider community, service users and/or staff
- Efficiency or saving proposals
- Setting budget allocations for new financial year and strategic financial planning
- New project proposals affecting staff, communities or accessibility to the built environment, e.g., new construction work or adaptations to existing buildings, moving to on-line services, changing location
- Large Scale Public Events
- Local implementation of National Strategy/Plans/Legislation
- Strategic directive and intent, including those developed at Regional Partnership Boards and Public Services Board, which impact on a public bodies functions
- Medium to long term plans (for example, corporate plans, development plans, service delivery and improvement plans)
- Setting objectives (for example, well-being objectives, equality objectives, Welsh language strategy)
- Major procurement and commissioning decisions
- Decisions that affect the ability (including external partners) to offer Welsh language opportunities and services

(b) Please name and fully describe initiative here:

A Tree Management Strategy report to Policy Development Committee prior to be reported on to Cabinet/Council setting out the Authority's protocols for the management of trees on land in Council ownership, as well as how protected trees and trees in private ownership affecting Council land will be dealt with. It seeks to ensure that the Council manages the trees it looks after well and has regard to the benefits of and risks to trees.

Q2 What is the potential impact on the following: the impacts below could be positive (+) or negative (-)

	High Impact		Medium Impact		Low Impact		Needs further investigation
	+	-	+	-	+	-	
Children/young people (0-18)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Older people (50+)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Any other age group	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Future Generations (yet to be born)	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Disability	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Race (including refugees)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Asylum seekers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Gypsies & travellers	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Religion or (non-)belief	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Sex	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Sexual Orientation	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Gender reassignment	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Welsh Language	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Poverty/social exclusion	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Carers (inc. young carers)	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Community cohesion	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Marriage & civil partnership	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Integrated Impact Assessment Screening Form

Pregnancy and maternity

Q3 What involvement has taken place/will you undertake e.g. engagement/consultation/co-productive approaches? Please provide details below – either of your activities or your reasons for not undertaking involvement

The Strategy has been produced in collaboration with relevant Council service areas that deal with tree management, including Parks, Highways, Landscape, Nature Conservation, and Environmental Health. It brings together existing management practices in a single document. There is no associated increased resource available for tree management, therefore public consultation is not currently proposed as it would unrealistically raise expectations of additional/increased frequency of management work. However the need for consultation will be a matter for consideration by the PDC. The intention will be for the strategy to be published on the Council’s webpages as a reference document.

Q4 Have you considered the Well-being of Future Generations Act (Wales) 2015 in the development of this initiative:

- a) Overall does the initiative support our Corporate Plan’s Well-being Objectives when considered together?
 Yes No
- b) Does the initiative consider maximising contribution to each of the seven national well-being goals?
 Yes No
- c) Does the initiative apply each of the five ways of working?
 Yes No
- d) Does the initiative meet the needs of the present without compromising the ability of future generations to meet their own needs?
 Yes No

Q5 What is the potential risk of the initiative? (Consider the following impacts – equality, socio-economic, environmental, cultural, legal, financial, political, media, public perception etc...)

High risk

Medium risk

Low risk

Q6 Will this initiative have an impact (however minor) on any other Council service?

Yes No **If yes, please provide details below**

Responsibility for the management of the Council’s tree stock falls to each department (and school) that has trees on its land. This Strategy has therefore been produced to ensure a consistent approach to dealing with tree related matters across the Council and compliance with legislation relating to the protection of trees.

Integrated Impact Assessment Screening Form

Q7 What is the cumulative impact of this proposal on people and/or communities when considering all the impacts identified within the screening and any other key decisions affecting similar groups/ service users made by the organisation?

Trees play a vital role in promoting sustainable communities. They are important in the creation of 'Place', provide vital habitat for dependant wildlife populations and substantial environmental and health benefits, such as attenuation of noise and improving air quality. They are also of importance in addressing climate change through carbon sequestration and the creation of more resilient ecosystems.

Trees also have significant health and well-being benefits as they:

- Can increase pride and community cohesion in the local area
- Have a positive impact on crime reduction
- Promote spiritual well-being, due to their stature, strength, and endurance, e.g. putting people in touch with nature and reducing depression and anxiety
- Provide a source of recreation, entertainment and quiet enjoyment, offering opportunities to unwind and de-stress, and provide families with a pleasant environment within which to spend quality time together
- Have a positive impact on people's physical and mental health, - studies show that children living in areas with more street trees have lower prevalence of asthma due to their role in removing dust and particulates from the air
- Encourage exercise that can counteract heart disease and Type 2 diabetes
- Offer a rich outdoor learning classroom for all, especially when part of a natural wooded environment.
- Help children concentrate at school where they can be seen from the classroom

Outcome of Screening

Q8 Please describe the outcome of your screening below:

The Tree Management Strategy will ensure that all people and communities enjoy the full financial, social/cultural, economic and environmental benefits of sound and consistent management and maintenance of Council owned trees. Some groups including children, those with underlying health issues and future generations will enjoy the greatest benefits through the Strategy's role in contributing to the retention and expansion of tree canopy coverage within the County.

The Strategy has been produced collaboratively by the various service areas responsible for the management of trees and brings current best practice together in a single document for the benefit of those departments and sections that have trees on their land to ensure a consistent corporate approach for dealing with tree related matters. It will help to address the risks to trees from disease, development damage, etc, and the long term challenge of increasing tree canopy cover throughout the county working with partner/funding organisations and voluntary groups. It will also assist with local measures to tackle nature and climate emergency for the benefit of future generations.

Its production, in accord with the 5 ways of working in the Well Being of Future Generations Act, is a specific step of the Corporate Plan Objective for Natural Resources and Biodiversity. The adoption of this document will address the corporate risk of not having a Tree Management Strategy in place and will bring the Council in line with other local authorities in this regard.

The Strategy will support national and local policies for the protection of trees and emerging national and local plans and strategies for expanding tree canopy coverage in recognition of the

Integrated Impact Assessment Screening Form

vital role trees play in addressing climate change through carbon sequestration and the creation of more resilient ecosystems, as well as their significant health and well-being benefits.

(NB: This summary paragraph should be used in the relevant section of corporate report)

Full IIA to be completed

Do not complete IIA – please ensure you have provided the relevant information above to support this outcome

NB: Please email this completed form to the Access to Services Team for agreement before obtaining approval from your Head of Service. Head of Service approval is only required via email.

Agenda Item 6

Report of the Director of Place / Cabinet Member for Climate Change and Service Transformation

Economy, Environment and Infrastructure Policy Development Committee

16 December 2021

Climate Change and Nature Strategy

Purpose: This report highlights the recently approved Cabinet report on the Climate Change and Nature Strategy (18th November 2021) which took into account the recent declaration of a Nature Emergency on 4th November 2021. To aid forward planning, it also informs the Committee on the current status of each policy area included within the governance structure.

Report Author: Martin Nicholls
Finance Officer: Ben Smith
Legal Officer: Tracey Meredith
Access to Services Officer: Rhian Miller

For Information

1. Introduction

- 1.1 Since the last update presented to the PDC in December 2019 there has been lots of positive activity within the Climate Change and Nature areas, both internally within the council, regionally and nationally. Most importantly a second update report and new Strategy were approved by Cabinet on 18th November. This report provides an overview of progress and will help the committee to determine which related policies to bring forward in the coming year.
- 1.2 Swansea Council declared a Nature Emergency on 4th November 2021, and this has since been reflected in the governance changes below. Further work will be required by the Nature Conservation team to develop a Nature Recovery Action Plan.

2. Governance Update

2.1 Governance has been formalised both internally and externally with partners, including PSB (Public Service Boards) and regular programme boards and steering group meetings have ensured good progress throughout 2020-21.

The Programme Board now reflects a council wide involvement with the addition of Education, Resources and Social Services colleagues, plus a change in name of both the board and strategy to reflect the importance of Nature Recovery too.

Also, Swansea Environment Forum, whilst still under contract to Swansea Council (March 22), will lead the main external partner forum for the remainder of this financial year. The tender process will begin for a future partner in the New Year.

As part of the regional agenda the 4 local authorities have progressed a new draft regional energy strategy due to be approved by cabinet in December. Further work is also progressing as part of the new CJC work programme also due to be reported to cabinet in December.

Fig 1. Swansea Council Governance

2.2 The Council’s Well-being and Strategic Equality Objectives set out within the Corporate Plan and Strategic Equality Plan establish the Council’s overall strategic framework for maximising its contribution to a more resilient and a more equal Wales.

The plans are aligned and contain steps to tackle climate change and nature recovery and, through that work, address and improve equality.

In light of the recent ‘Nature Emergency’ announced by Swansea Council on 4th November 2021, the overall programme has transformed from ‘Climate Change’ to ‘Climate Change and Nature Recovery, i

The intention is to cascade this down through all future activities and also in the proposal to amend the corporate well-being objective within the 2022/27 Corporate Plan and any subsequent changes necessary to the **Strategic Equality Plan** so as to maximise our contribution to a more environmentally resilient and a more equal Wales.

To ensure that in addition to achieving **Net Zero 2030 for Swansea Council**, we will continue to work with partners, organisations, schools, businesses to support **Swansea** as a whole county and citizens in its efforts to become **Net Zero by 2050**, aligning with the **Net Zero Wales Carbon Budget (2) 2022-2025**. Establishing both Climate and Nature Charters and a Pledge Wall to encourage active participation and help build a healthier, more prosperous and greener Swansea.

Fig 2. New Strategic Approach

3. Strategy and Policy Update

3.1 The new **Climate Change and Nature Strategy** document is attached as **Appendix 1**. This will remain under continual review in light of Swansea’s recent Welsh Government emissions submission and the recent Nature Emergency declaration on Nov 4th 2021. It is recommended that approval for any subsequent changes would be delegated to the Steering Group Chair – Deputy Leader and Cabinet Member for Climate Change and Service Transformation, along with the Director of Place. The intention is to expand this to include a wider range of actions relating to delivering nature recovery and ecosystem resilience.

3.2 **Biodiversity Plan/Section 6/Nature Recovery Action Plan**

As required under the Environment (Wales) Act 2016 Biodiversity Duty, in December 2020 the Council submitted its first 3 year report outlining actions it had taken to maintain and enhance biodiversity and the resilience of ecosystems. Having appointed a new Biodiversity Officer in June 2021 we are in the process of consulting with all services across the council to develop a Section 6 Biodiversity Plan for the period 2021-2023.

In collaboration with members of the Local Nature Partnership, we are currently reviewing and updating the Local Biodiversity Action Plan to produce a Nature Recovery Action Plan for Swansea in accordance with Welsh Government guidance. We are currently in the process of recruiting a Local Nature Partnership Project officer to assist with this work and to support the delivery of nature recovery across the County.

Much progress has been made during the last two years enabled by revenue and capital funding from Welsh Government, NRW and others. Examples include

- Welsh Government Local Places for Nature Grant: Penllergaer Valley Woods - the restoration of a PAWS(Plantation on Ancient Woodland) woodland through the clearance of non-native species and replanting with new native broadland woodland.
- Welsh Government Local Places for Nature Grant: Swansea Nature Network – creating, enhancing and connecting biodiversity assets to create resilient multifunctional greenspaces, ecosystems and wildlife sites within and around urban communities. This has included tree planting and the creation of new community orchards and the management of grassland areas for pollinators.

The recently awarded an Enabling Natural Resources and Wellbeing schemes (ENRaW); Welsh Government Rural Communities –grant ‘Connecting Green Infrastructure South West Wales’ will enable us to recruit additional temporary staff to deliver wider benefits for biodiversity across the whole county and also at a local Ward scale , and to engage more actively with communities and volunteers over the next 18mths.

3.3 **Develop a Sustainable Transport Strategy** – A task and finish group has been established to bring together all the great work currently being undertaken across the Highways and Transportation service area. This includes:

- Green Fleet
- Grey Fleet
- Street Lighting
- Other transportation e.g. taxi, schools etc.
- Active travel

This includes the new strategy for Ultra Low Emission Vehicles (ULEV) recently presented to committee, as part of the green fleet strategy which is required by Welsh Government to enable it to align it with any upcoming grant awards. It is proposed that the draft Sustainable Transport Strategy is presented to PDC in January 2022.

3.4 A draft **Tree Management Strategy** is also being presented to Economy, Environment & Infrastructure PDC on 16th Dec setting out protocols for the management and maintenance of trees on/affecting land/property in Council ownership as well as the Council's duties in relation to protected trees.

3.5 **New School Buildings** - We are working closely with Education colleagues to further enhance our Employer's Requirements (ERs) and meet the Welsh Government target of net-zero carbon schools from 1st January 2022 and further detail and funding mechanisms will be available in due course.

3.6 **Procurement.** The following policies and guides are in development:

- A new socially responsible and sustainability procurement policy.
- A procurement guide for social value procurement.
- A social value procurement checklist.
- Introduction of mandatory completion of a sustainable risk assessment as part of procurement planning stage for procurements above a certain threshold. (Threshold value to be confirmed)
- A new procurement notification form which incorporates socially responsible procurement considerations.
- A new contract award report to capture what consideration has been given to social value during the procurement process, the expected outcomes and monitoring arrangements.

This may be a policy area where the PDC would wish consider as part of their forward work programme.

3.7 **Housing** - The **decarbonisation** of 13,580 Council owned houses in line with emerging WHQS2 Guidance has commenced. The cost of the programme is estimated to be £750m over a 10 year delivery period. Future progress will depend on availability of financial resources. The Council is working with Welsh Government to identify a capital funding delivery model. Initial demonstrator schemes will help establish technical solutions and supply chains to deliver at scale and pace as finance becomes available.

The Council's **More Homes Strategy** and associated 4 year development plans are focussed on providing new build Council housing, and set an ambitious 10 year delivery plan for 1000 new affordable homes. The Council developed its own Swansea Standard for new build, which can be combined with renewable technologies to create Homes as Power Stations. The key aim is to reduce energy demand and

reduce fuel poverty for residents. Every More Homes development places a strong emphasis on providing a variety of housing types and tenures to meet local need, building places at a walkable scale, with homes, local facilities and public transport within walking distance of each other and integrating green infrastructure, informed by the planning authority's Green Infrastructure Assessment. Every new home also contains a swift brick to encourage nesting birds.

The Strategy also includes an acquisitions element.

This was last reported to the PDC in March 2021 and is due to again be reported early in 2022.

- 3.8 The **Waste Strategy Policy** 2022-25 to take us to 70% has been drafted and is being discussed with the Cabinet Member prior to Cabinet in the New Year. The committee may consider this area as a suitable topic for their future work programme.

Biodiversity (maintenance of grassed areas) – Update report going to PDC on 16 December outlining further trials next season for the creation of biodiverse grassed areas (meadow lands). Further cut and collection equipment is being purchased, and work is ongoing to categorise options for different highway verge scenarios.

- 3.9 **Green Infrastructure Strategy** Swansea Central Area: Regenerating our City for Wellbeing and Wildlife was adopted in Feb 2021 by the Council following engagement by the PDC. Over the last 10 months the focus has been on embedding and delivering the outcomes of the strategy and includes internal staff knowledge and skill development and securing capital funding from the Welsh Government and Local Nature Partnership for green infrastructure/nature based solutions and biodiversity schemes. Schemes currently being delivered include:

- Local Places for Nature: City Nature - increasing and enhancing nature in the city centre,

We have recently been awarded an Enabling Natural Resources and Wellbeing schemes (ENRaW); Welsh Government Rural Communities – Rural Development programme 2014 – 2020 grant 'Connecting Green Infrastructure South West Wales' – this revenue grant for next 18 months focusing on taking a regional collaborative approach to designing and implementing green infrastructure and nature recovery across Neath Port Talbot, Swansea and Carmarthenshire.

In addition over the last 10 months we have seen a number of GI typologies including green walls and green roofs being installed in the city centre including the Environment Centre in Pier Street, Coastal High Street office buildings and most recently Potter Wheel on the Kingsway.

Next steps going forward include continuing to deliver schemes on the ground and the design and development of the countywide GI Strategy which it would be expected will be progressed in conjunction with the PDC from March 2022.

3.10 **Local Development Plan** - National planning policy and guidance places an increasing emphasis on the role of planning to address the challenges of the climate and nature emergencies. Swansea's LDP, adopted in 2019, provides the Council, as the Local Planning Authority, with a clear strategic framework to guide development to meet these challenges at the local level. More recently, the Council have prepared a suite of supplementary planning guidance to support the implementation of the LDP, and adopted the DcFW Placemaking Charter. This has considerably strengthened the Council's ability to make planning decisions which deliver against a range of critical corporate duties, responsibilities and objectives, (including, WCFG Act - Social & Economic Duty, EA(W) Act – s6 Biodiversity duty – obligations under Sustainable Drainage guidance etc). The Placemaking and Strategic Planning team play a key role in guiding the placemaking, master planning and delivery of large scale, strategic developments to ensure that they are in accordance with local and national climate change and nature emergency policy objectives. The team are also specifically involved in policy implementation on the More Homes, providing advice on the sustainability of the Council's own developments against policy objectives. Currently the supporting SPG is progressed via the planning committee

3.11 **Energy Plan** - On 19th November 2020, the Energy and Carbon Management Plan and Action Plan was approved by Cabinet following engagements with the PDC. It provides a co-ordinated approach which will identify and analyse energy and carbon emissions from the delivery of the Authority's operational service deliveries and will

- Provide an overarching programme that will align and integrate all legislations and policies that relate to energy, carbon management and climate change
- Clearly define Swansea Council strategic ambition and intent for addressing energy and carbon management
- Quantify the Authority's baseline carbon emissions from its service property activities.
- Identify and evaluate energy saving projects towards reducing energy costs
- Adapt to the new Welsh Government Public Sector Net Zero Carbon Reporting requirements,
- Adapt a low carbon / renewable technology way of working, reducing the dependency on conventional energy supplies.

The plans were presented to Scrutiny Programme Committee on 14th September 2021 in response to a request by Cabinet Members to explore responsibilities and issues in relation to the Energy and

Climate Change Strategy, included within the Climate Change and Service Transformation Portfolio.

In 2017, the Welsh Government (WG) set the ambition of achieving a carbon neutral public sector by 2030. In doing so, WG recognised the public sector is uniquely placed to influence emissions far more widely than its own, relatively small direct emissions in areas such as transport, energy and land use. As well as tackling the issues of air pollution, WG deem that this approach can have a positive impact on the local economy by reducing energy costs and by creating investment opportunities for the low carbon economy.

In March 2019, WG published Prosperity for All: A Low Carbon Wales which includes Policy 20: '*Support the public sector to baseline, monitor and report progress towards carbon neutrality.*'

Achieving this aim will require, amongst other things:

- Achieving net zero carbon emissions through actions to reduce emissions and increase the removal of carbon from the atmosphere;
- Understanding the priorities, costs, stakeholders and wider impacts of actions;
- Improving understanding of opportunities to implement climate change mitigation;
- Improving understanding of the role of the public sector in influencing change in the wider society and economic system.

It is intended that the Welsh Public Sector Net Zero Carbon guide published in May 2021 replaces and builds on the Carbon Reduction Commitment scheme, for which the last reporting year was 2018/19. The approach also delivers against Policy 19: '*Welsh Government to consult on options for successor Carbon Reduction Commitment Scheme*' in summer 2019. The guide details the principles and priorities for the Welsh Public Sector Net Zero Carbon reporting approach, its operational and organisational scope and the data which public bodies in Wales will need to assemble in order to fulfil the reporting requirements covering Energy including Water; Transport; Waste; Supply Chain Emissions and Land-based Emissions and Sequestration.

3.12 **Well-being of Future Generations Act - The Council's Sustainable Development Policy** is being updated and will be going to PDC for further review in January. The Corporate Plan which sets out the Council's well-being objectives for the next five years is also being reviewed for 2022-27 by services and leadership. This takes into account the Council's response to the climate and nature emergencies. The process will also inform the development of service plans for the next year. The Council's Strategic Equality Plan runs until 2024 and links to the corporate plan. It currently addresses many climate and nature issues in relation to fairness for all.

4. Integrated Assessment Implications

4.1 The Council is subject to the Equality Act (Public Sector Equality Duty and the socio-economic duty), the Well-being of Future Generations (Wales) Act 2015 and the Welsh Language (Wales) Measure, and must in the exercise of their functions, have due regard to the need to:

- Eliminate unlawful discrimination, harassment and victimisation and other conduct prohibited by the Acts.
- Advance equality of opportunity between people who share a protected characteristic and those who do not.
- Foster good relations between people who share a protected characteristic and those who do not.
- Deliver better outcomes for those people who experience socio-economic disadvantage
- Consider opportunities for people to use the Welsh language
- Treat the Welsh language no less favourably than English.
- Ensure that the needs of the present are met without compromising the ability of future generations to meet their own needs.

4.1.1 The Well-being of Future Generations (Wales) Act 2015 mandates that public bodies in Wales must carry out sustainable development. Sustainable development means the process of improving the economic, social, environmental and cultural well-being of Wales by taking action, in accordance with the sustainable development principle, aimed at achieving the 'well-being goals'.

4.1.2 Our Integrated Impact Assessment (IIA) process ensures we have paid due regard to the above. It also takes into account other key issues and priorities, such as poverty and social exclusion, community cohesion, carers, the United Nations Convention on the Rights of the Child (UNCRC) and Welsh language.

4.2 An IIA Screening Form has been completed with the agreed outcome that a full IIA report was not required. This report covers an overarching strategy, each action as and when pursued will be screened independently. The IIA screening form is attached as **Appendix 2**

5. Financial Implications

5.1 There are no direct financial implications associated with this report. However, it is clear to reach both the 2030 and 2050 targets, significant investment is required and any such decisions would be subject to separate cabinet reports at the time with the council continuing to lobby both Welsh and UK Governments to seek appropriate funding

6. Legal Implications

6.1 There are no legal implications associated with this report.

Background Papers: None

Appendices: These will be included within the report.

Appendix 1	Climate Change and Nature Strategy
Appendix 2	IIA

Climate Change & Nature Strategy 2021-2030

1. Introduction

Climate change is the long-term alteration of temperature and typical weather patterns largely caused by human activity, like burning fossil fuels, like natural gas, oil, and coal. Burning these materials releases what are known as greenhouse gases into the atmosphere. Human health and well-being is vulnerable to such change. This shift is expected to cause fluctuating weather- heat and fire, drought and flood, an increase in waterborne diseases, poor air quality, threats to wildlife and loss of food sources.

The image below shows how the temperatures across Wales are already increasing year on year, setting a clear trend towards a hotter climate which will bring significant consequences.

Wales Warming Stripes – 1884 -2020 (Professor Ed Hawkins MBE, University of Reading)
[#ShowYourStripes](#).

We all have a responsibility to act now. A public sector target of 2030, ahead of the Welsh Government's target of 2050 for the whole of Wales, will give us our best chance of keeping global warming below 1.5°C.

This is the tipping point at which the climate impacts we're already experiencing will go from bad to potentially catastrophic. We'll see natural systems cross danger points, triggering lasting changes such as extreme storms, heatwaves, mass loss of natural habitats and species.

Nature Recovery is of equal parity.

2. So what are Swansea Council doing about it?

Legislation, Regulation and Policy

There is a range of well publicised legislation and policy helping to drive this change:

Globally

The international Paris Accord 2015 which seeks to keep global temperature increases well below 2 degrees.

The IPCC (Intergovernmental Panel on Climate Change) - In their Climate Change 2021 report, conclude that:

- there is still time to limit the worst effects of climate change
- stabilising the climate will require the globe to reach net-zero CO2 emissions by 2050

- human activities have already caused around 1.1°C warming
- the planet’s climate is warming faster than anything experienced
- every part of our planet is already seeing multiple and increasing changes in their climate systems
- global warming is very likely to reach 1.5°C by 2040
- climate change is intensifying the water cycle affecting rainfall patterns
- coastal areas will see continued sea-level rise throughout the 21st century
- further warming will amplify impacts on frozen regions
- the ocean is warming and acidifying.

Nationally

In 2019 the UK Government amended the Climate Change Act 2008 by increasing the target for reducing greenhouse gas emissions in the UK to at least 100% lower than 1990 levels by 2050. This is otherwise known as the Net Zero target.

The Welsh Government Well-being of Future Generations Act 2015 which requires accountability for the impacts of long term decision making.

The Environment (Wales) Act 2016 supports finding ways to secure healthy, resilient and productive ecosystems for the future whilst still meeting the challenges of creating jobs, housing and infrastructure.

Welsh Government has set out its legal commitment to achieve net zero emissions by 2050, but is pushing to “get there sooner”. It recognises that climate change will impact us all, but the stark reality remains our most vulnerable communities will be hit the hardest. Welsh Government recognises that transition towards a Net Zero Wales must be fair and just, in order to achieve a green and clean future with good quality jobs and leaves no communities behind.

Swansea will strive to align with the Net Zero Wales Carbon Budget 2 (2021-2025), embracing the Team Wales approach.

Regionally

As part of the regional agenda the 4 local authorities – Carmarthenshire, Pembrokeshire, Neath Port Talbot and Swansea have progressed a new regional energy strategy. Further work is also progressing as part of the new CJC work programme.

Locally

Following the Notice of Motion on Climate Change Emergency presented to Council on 27th June 2019, the Authority reaffirms its commitment to:

- Call upon the UK and Welsh governments to provide us with the necessary powers and resources to ensure Swansea Council becomes net zero by 2030.
- Publicise climate emergency and promote a greater awareness of the truth of climate change amongst the local population aiming for a county wide target of net zero by 2050
- Work with relevant experts in research and development to:
 - Review our current strategies and action plans for addressing climate change.
 - Identify any further policy changes or actions which we could undertake, within the scope of our powers and resources, to meet the challenge of climate emergency.

- Seek the help of local partners such as Swansea University and other research bodies to, within one year, produce a report to share with the community, explaining work already underway and achievements already made, as well as targets for the future.
 - Update on further work undertaken by the Council in this area on an annual basis through the Council Annual Review of Performance Report section on corporate objective - Maintaining and enhancing Swansea's natural resources and biodiversity.
- The Council undertook a citizen's survey in March 2021, with excellent response, but the key message taken on board is 'Go Faster, Go Further'.

3. The Vision

Swansea Council's commitment to addressing climate change is broken down into clearly defined work streams alongside its commitment to nature recovery.

The council will lead by example and be the focal point for response to climate and nature action across the whole city and county.

The council business will strive for net zero carbon by 2030, establishing monitoring processes for emissions and developing a robust action plan in order to achieve the target.

Working with partners, the council will call on the whole City and County of Swansea, its major employers, its citizens, community groups and businesses to contribute to achieving net zero carbon by 2050. There will be a need for collective leadership and a shared ambition.

Nature Recovery - A separate action plan will be formulated to sit alongside this strategy.

5. Governance

- 5.1 To enable the Council to continue to make progress one of the key actions from the NoM was to review the current policy framework and how this could contribute to the achieve achievement of net zero carbon and climate emergency response.
- 5.2 Therefore it has been necessary to review over 100 Council policies that contribute to this agenda and distil these down to 8 key themes as outlined below.

The infographic demonstrates that these policies overlap to firstly feed into the core short term target of net zero carbon for the council emissions by 2030 and the longer term goal of achieving a similar aim for the whole of the city by 2050. These policies are then intrinsically wrapped up in the overarching requirements of the Corporate Plan, Strategic Equality Plan and Wellbeing of Future Generations Act (Wales) 2015.

The governance structure represents a golden thread not only through the organisation, but externally with partners.

6. The journey so far

Swansea Council have achieved a great deal over several years to mitigate the impacts of Climate Change such as:

- Swansea Council procures its energy using Crown Commercial Services Framework Agreements, via the National Procurement Service (NPS), for its energy supplies. All electricity procured via the NPS framework is from 100% renewable energy sources; 41% sourced from Wales (Apr 20 – Mar 21); Gas – Total Gas and Power (TGP) procured as new gas supplier (from Apr 21), registered interest in purchasing 'Green Gas'- dependant on viability and cost impact.
- Refit Low Carbon Programme - Swansea Council is participating in the Welsh Government supported Re:fit Low Carbon Programme to implement energy efficiency saving opportunities in non-domestic buildings. A £1.3 million interest free loan has been secured from Welsh Government Wales Funding Programme (Salix) to deliver a Re:fit Cymru (Energy Efficiency) Phase 1 project comprising over 18 buildings which is projected to save an estimated 400 tCO₂e every year. Quantifying the energy savings delivered by the Energy Conservation Measures (ECMs) will be validated using the Measurement and Verification (M&V) process.
- Carbon Reduction Retrofit (phase 2): Working towards developing a business case to implement Energy Conservation Measures for Education Services - Schools.
- Swansea Council with the support of Welsh Government Energy Services are progressing towards the development of a 3MW Ground Mounted Solar PV farm located on a capped waste land filled area. It is predicted over the asset lifespan (35 years) that 101,302,731 kWh of renewable energy will be generated equating 28,454 t/CO₂. Part of this capital expenditure cost could be recovered as it would create revenue for the Authority, in the form of either Power Purchase Agreements (PPA) or private wire connection. There is the potential opportunity of extending the Solar PV site in future years as current additional waste land is capped.
- Public Sector Hub: Cabinet are considering moving from the Civic Centre to a new public sector hub in the heart of the city centre as part of Swansea Bay Central Phase 2, the £1bn project to revitalise the St David's area of the city centre. This is an opportunity for the Authority to show its commitment towards meeting its net zero carbon aspirations by 2030 incorporating renewable technologies into the design specifications.
- Progressing work towards a world-leading Swansea Bay Tidal Lagoon, estimated electricity generation of 504,854 MWh, equating to carbon emission savings of 94,913 mT CO₂e.

6.1 Community Energy

Community energy covers aspects of collective action to reduce, purchase, manage and generate energy. Community energy projects have an emphasis on local engagement, local leadership and control and the local community benefiting collectively from the outcomes.

6.2 Homes as Power Stations

- 6.2.1 Since the first development at Colliers Way, the More Homes development team, in partnership with Corporate Building Services (CBS) have developed the Swansea Standard which has incorporated Homes as Power Stations (HAPS) owing to Welsh Government (WG) Innovative Housing Programme (IHP) funding enabling Swansea Council to build exemplar homes,

combining the latest Innovative renewable technologies such as Solar PV, Tesla Batteries, Mechanical Ventilation Heat Recovery (MVHR) and Ground Source Heat Pump (GSHP).

- 6.2.2 With a building fabric first approach integrating the Swansea Standard; Swansea Council has been able to build homes that are super energy efficient; achieving the EPC rating of A and which are almost self-efficient in producing their own energy to decrease energy demand and tackle fuel poverty typically generating around 60% - 80% of the energy consumed.
- 6.2.3 The HAPS properties are being monitored in collaboration with Welsh School of Architecture (WSA) at Cardiff University. The research team will work in collaboration with industry, government, academia and the public on built environment projects and evaluate renewable energy supply, energy storage and energy demand reduction technologies to create a low carbon-built environment that is both replicable and affordable.
- 6.2.4 The HAPS developments have now been completed at The Parc Yr Helyg development in Birchgrove (September 2020) and Phase 2 of the Colliers Way, Penplas development (April 2021). The Hill View Crescent/Beacons View Road HAPS development is scheduled to be completed by early 2022. The latest HAPS standard development is due to start in West Cross.
- 6.2.5 In addition, Swansea Council have retrofitted to HAPS standard several bungalows at Ffordd Ellen, Craig Cefn Parc which are also being monitored by WSA.

6.3 District Heating System

- 6.3.1 The latest consultant study from 2018 showed that there is an opportunity for Swansea Council to deliver a viable city centre District Heating System network, but this would not be without cost or risk. The options for delivery include a wholly Swansea Council owned and operated model through a Special Purpose Vehicle (SPV), or a joint venture partnership with the private sector to reduce the risk (and return). Assumptions were made that certain city centre buildings would connect to the network and the construction costs of £11.5m (excluding inflation and fees but including contingency at 30%) could attract a return of 8.2% over a 20-year period. The risks revolve around lower than forecasted energy demand, lower heat payments/tariffs, lower additional revenues and higher capital and operating costs, all of which would affect the Internal Rate Return (IRR) negatively. Since the biggest of these risks is demand, it should be noted that 55% of the energy demand came from three of our development sites (Copr Bay Phase 1, Sailbridge, Civic Centre), to date only Copr Bay has been developed, the other two are yet to come online.
- 6.3.2 The timescales of the District Heating System network proposal and the Copr Bay development weren't aligned with one another sufficiently enough for the heat network to be included within the Copr Bay scheme. Consideration was given to installing ductwork across Oystermouth Road during the Copr Bay construction which could be used in the future for district network pipework. Unfortunately the nature of the road construction, location of existing underground services and the additional complexities due to trench sizes and logistic issues with highway closures and noise considerations, there was no benefit in installing the ductwork during the Copr bay construction. That does not preclude the development from connecting to a heat network in the future, however. The heating solutions installed in Copr Bay could connect to such a heat network if one was established.

6.4 **Solar PV Schemes - Swansea Community Energy & Enterprise Scheme (SCEES) and EGNI/AWEL Co-Operative**

- 6.4.1 These are schemes exploring how local people in some of Swansea's most economically deprived areas can benefit from community renewable energy projects. They have installed Solar PV systems on a number of Swansea schools with a total estimated renewable generation of electricity amounting to 946,211 kWh/year (assuming 85% Solar PV generation

used by schools, this equates to 804,279kWh/yr at electricity corporate rates (£0.13/kWh), estimated financial savings of £104K).

6.4.2 As part of the Egni Co-operative's Solar PV proposal offer to Swansea Council, they have partnered with charity 'Energy Sparks' to provide educational and energy data visualisation programmes to several Swansea schools. Working in collaboration with Education Services and School ECO Clubs, Energy Sparks will provide access to their online energy analysis software to monitor the schools smart meter data to identify energy and financial savings, along with carbon emission reductions. The software will also show the Solar PV data generation from the Egni Co-op PV System. The programme is supported with an extensive list of built-in energy related activities and lesson plans categorised by education level (key stage); subject (Science) and topic (Climate Change).

6.5. **Swansea City Deal**

The Swansea Bay City Deal is a £1.3bn investment in 9 major projects across the Swansea Bay City Region – which is made up of Carmarthenshire, Neath Port Talbot, Pembrokeshire and Swansea together with the Abertawe Bro Morgannwg and Hywel Dda University Health Boards, Swansea University, the University of Wales Trinity Saint David, and private sector partners. The City Deal is being funded, subject to the approval of project business cases, by the UK Government, the Welsh Government, the public sector, and the private sector. Over the next 15 years, the City Deal will boost the regional economy by £1.8bn and generate almost 10,000 new, high-quality jobs. The new Swansea arena is part of the council's £135m Swansea Central Phase One transformation scheme which includes almost 1,000 parking spaces. The arena's external skin will be covered in tens of thousands of LED lights. It is due to open in 2021/22.

6.6. In addition, Swansea Council have been in collaboration with Welsh Government and Swansea Bay City Region partners to 'draft' a Regional Energy Strategy plan for South West Wales which will be completed towards by the end of 2021.

6.7 Promoting Welsh & UK Government campaigns and programmes to increase energy efficiency amongst private tenants and home owners, reducing fuel poverty and reducing emissions.

6.8 The Blue Eden Tidal Lagoon formally launch in October 2021, along with other community owned renewable energy schemes, like SCEES, to deliver clean energy and benefit local schools and community buildings. The lagoon alone has an estimated electricity generation of 504,854 MWh, equating to carbon emission savings of 94,913 mT CO₂e.

6.9 Working with others nationally to urge Welsh Government to develop electric car charging infrastructure.

6.10 Being leaders of good practice in Wales through having Sustainable Development policies and approaches pre-dating the Well-Being of Future Generations Act.

6.11 Building the first council housing in a generation here in Swansea to a super-energy-efficient "Swansea Standard" that will enable all components to be procured locally and reducing emissions using solar battery storage and air source heat pumps.

6.12 Using innovation in construction for flagship projects such as Pentrehafod School, showcasing waste minimisation and sustainability.

6.13 Winning investment for innovative green technology, such as "Homes as Power Stations", as part of the City Region Deal.

- 6.14 Securing funding for a vast increase in Active Travel (walking and cycling) routes throughout the county and supported Swansea University's community cycle scheme.
- 6.15 Implementing agile working so that the workforce may reduce unnecessary travel.
- 6.16 Developing local procurement practices to reduce carbon footprint.
- 6.17 In Education, Swansea is an early joiner of the international EcoSchools programmes which encourages schools to promote recycling and reduce energy and water consumption.
- 6.18 Encouragement of Foundation Phase pupils to learn outdoors ensuring a respect for nature, biodiversity and eco-systems.
- 6.19 At KS4, developing partnerships with Universities to establish STEM workshops including the impact of climate change.
- 6.20 Recently incorporating care for the natural environment into the corporate plan as a new priority, recognising the hugely important contribution made by the extensive work of our Nature Conservation Team.
- 6.21 Working with Swansea Public Services Board to improve local services. The four statutory members of the Board are Swansea Bay University Health Board, Natural Resources Wales, the Fire and Rescue Service and the council who will continue to work collectively to improve local social, economic, environmental and cultural well-being as set out in the Well-being of Future Generations Act (Wales) 2015. For this part the focus will be on a Greener Wales.
- 6.22 Street lighting have upgraded 21,053 street lights to LED, along with the installation of City Touch, Central Management System commissioned to control the street light output around Swansea ring road (financial and carbon savings).
- 6.23 Council car parks have had electric vehicle charge points installed. A total of 16 dual-headed charge points have been installed, serving 32 recharging bays. With the exception of the two Park & Ride sites, the charge points provide 22kW 'fast' charging capabilities. The Park & Ride sites feature 7-22kW charge points (load balancing depending on how many vehicles are plugged-in at the same time). All charge points provide 100% renewable electricity to users. Users can access the charge points through an App or by calling a 24/7 customer service line (bi-lingual).
- 6.24 Active Travel. The total network has increased in length by 25% in the past three years, with over £12million of investment made in active travel infrastructure. Of the 72,000 households in Swansea, 60% now live within 500m of a dedicated off-road cycle route.

7.0 **Swansea Council Net Zero Carbon by 2030**

As the governance structure implies, 8 critical areas of the authority are working on their action plans in order to deliver the 2030 target.

i. **Energy Strategy**

Swansea Council recognise and understand the importance of effective energy and carbon management and the implications and risks of climate change, rising energy costs and the preservation of finite energy sources. The preservation of our natural environment on a regional and national level and safeguarding of the wellbeing of our communities for current and future generations is a vital aim of the Authority.

It is within this context that the Energy and Carbon Management Strategic Plan was developed. The Energy and Carbon Management Plan provides a co-ordinated approach which will identify and analyse energy and carbon emissions from the delivery of the Authority's operational service deliveries and will:

- Provide an overarching programme that will align and integrate all legislations and policies that relate to energy, carbon management and climate change
- Clearly define Swansea Council's strategic ambition and intent for addressing energy and carbon management
- Quantify the Authority's baseline carbon emissions from its service property activities.
- Identify and evaluate energy saving projects towards reducing energy costs.
- Adaptable to the new Welsh Government Net Zero Carbon Reporting requirements.
- Adapt a low carbon / renewable technology way of working, reducing the dependency on conventional energy supplies.

ii. **Green Infrastructure Strategy**

This strategy considers how green infrastructure can be increased in area and quality in the central area of Swansea in order to make it better adapted to climate change and better for people and wildlife. Green infrastructure is a term used to describe all the greenspace, soil, vegetation and water (ranging from parks to roof gardens) that provide the ecosystem services that make our cities liveable.

This strategy sets out a vision for the central area in Swansea to be much greener, creating green spaces and using a combination of street-level features like street trees and rain gardens as well as vegetation on buildings, including green roofs and green walls. The intention is to double the amount of green infrastructure (with the exception of open water) within 10 years.

The focus will be to create a green infrastructure network, centred on a Green Artery that will connect Swansea Station in the north, with the beach and marina in the south and the wider area, via existing, improved greenspaces including churchyards and Castle Square. Green infrastructure will be planned and designed to be multi-functional and will involve a partnership approach, using innovative solutions, including Supplementary Planning Guidance for green infrastructure and a Green Space Factor tool (GSF). Swansea Council is committed to using the GSF tool, designed for the Swansea Central Area, as a measure for the quantity and functionality of green space in development.

iii. **Local Biodiversity Plan**

Promoting Swansea's Natural Environment is a strategy and action plan for the protection, management, enhancement and promotion of Swansea's outstanding natural environment and biodiversity. It outlines a number of strategic actions required for the conservation of the wider biodiversity resource together with a set of detailed actions for the protection of priority habitats and species.

The Local Biodiversity Strategy and Action Plan (LBAP) has three key parts:

Part 1 Strategy This part provides a background to the biodiversity action planning process, identifies key issues affecting biodiversity in Swansea and priorities for future work. It proposes a number of broad actions to meet these priorities, and outlines procedures for measuring progress.

Part 2 Audit This part provides an overview of Swansea's biodiversity resource and contains information on protected habitats and species present in the County, together with draft proposals for the identification of a network of non-statutory Sites of Interest for Nature Conservation or candidate SINC.s.

Part 3 Habitat and species action plans This part provides detailed action plans for priority habitats and species which occur in the County in accordance with UK and Welsh Assembly Government Guidance. At the time of printing 23 Habitat Action Plans (HAP.s) and 98 Species Action Plans (SAP's) have been included. There are plans to add additional HAP's and SAP's in due course.

iv. Local Development Plan

The 2010-2025 Plan provides a clear planning framework to address key issues facing the County, providing certainty and the basis for efficient planning decisions. Its policies and proposals will enable the delivery of sustainable development, and ensure that social, economic, environmental and cultural well-being goals are all suitably balanced in the decision making process so that the right development occurs in the right place.

The Plan is underpinned by an extensive and up to date evidence base which, in combination with extensive public and stakeholder engagement undertaken during Plan preparation, has been used to identify the key opportunities, land use requirements, and issues for the County over the Plan period.

v. Procurement Strategy

Swansea Council procurement is underpinned by maximising the economic, social, environmental and cultural benefits that may be obtained from buying power. Best value can be viewed as the optimum combination of whole-life costs in terms of not only generating savings and good quality outcomes for the organisation, but also benefit to society and the economy.

Procurement activity strives to deliver the goals of the Well-being of Future Generations Act through a holistic approach to procurement processes and including where relevant specific provisions within the procurement documents. There is commitment to strive to ensure that carbon reduction ambitions that underpin the sustainable development principle are integrated within procurement practice as appropriate.

vi. Sustainable Transport Strategy

A great deal of positive work has been carried out in this area to date with all activity becoming part of this overarching strategy. This includes how the council deals with its Council fleet, the grey fleet (personal mileage by employees), its emissions from street lighting, the continued promotion of active travel and the development of a local and regional sustainable public transport system.

Some specifics include:

- Continuation of planning for, and improving the active travel network. Refresh of the current Active Travel maps and consult on potential new routes for development, though a new Active Travel Network Map in 2021.
- Increase levels of active travel though promotion, engagement and encouragement of active travel with the general public, businesses,

communities and educational establishments, through a behaviour change campaign, Swansea Bayways.

- Further roll out of EV charging infrastructure.
- Continue to deliver a 5 % year on year reduction in council fleet emission via its green fleet strategy.
- The development of the ULEV strategy will support further emissions reductions. Targets will gradually increase over time up to 10% per annum to align with technological advances in coming years.
- Seek to embed the reductions in grey fleet mileage which achieved 50% and 1 million miles less in 2020/21 to date.
- South West Wales Metro - Continue the development of business cases for investment in active travel, bus and rail projects across the region.
- Investigate low-emission public transport alternatives through work with partners, such as Transport for Wales and First Cymru to establish how vehicle emissions could be reduced in the future.

vii. Waste Strategy

The Council's existing strategy aligns to Welsh Government's recycling targets which aimed to achieve 64% recycling levels by 19/20 and this was achieved by Swansea. This target increases to 70% by 24/25 and the council is reviewing its option to achieve these increased levels.

In the meantime as part of the overall Climate change plan it will develop a new Waste Strategy which it will seek to align with the overarching Welsh Government plans over the coming 12 to 18 months.

viii. Housing Strategy (Decarbonisation)

Following the publication of the report, Better Homes, Better Wales, Better World (BHBWBW), Welsh Government set up a working group made up of the Welsh School of Architecture (WSA) and selected social landlords to further develop decarbonisation targets and prepare guidance for social landlords on decarbonising their housing stock.

Officers from the Housing Service have participated in the development of the study document and so are included in regular update meetings with Welsh Government's Decarbonisation Team and academics from WSA on latest developments.

Welsh Government has taken a view that a retrofit decarbonisation programme can be delivered as an extension to the existing Welsh Housing Quality Programme due for completion at the end of 2020. The revised WHQS programme that will commence in April 2021 will set a target achieving EPC A/SAP 92 to 231,000 socially owned properties by 2030, which represents almost 17% of the entire housing stock in Wales.

The next stage for Swansea will be to develop a long term Decarbonisation Strategy alongside the excellent work that is already being undertaken. Examples include:

New Homes 'Swansea Standard' are currently being developed as HAPS at Parc y Helyg, Birchgrove, Colliers Ways, Penplas development 1 and 2 and Hillview Crescent, Clase. The properties will not have a traditional gas supply, but will generate, store and then release their own electricity.

Homes as Power Stations (HAPS): The Council has retrofitted and transformed into HAPS 6 bungalows at Ffordd Ellen, Craig Cefn Parc which include external wall insulation, Ground

Source Heat Pumps (GSHP), Mechanical Ventilation Heat Recovery unit (MVHRs), PV solar roofs and Tesla battery storage.

9 City & County wide Net Zero Carbon by 2050

All activity will be underpinned by the Well-being of Future Generations Act goals and ways of working, the Corporate Plan Priorities and the Strategic Equality Plan actions.

- i. **The Well-being of Future Generations Act (Wales) 2015** This legislation places a duty on the Council to carry out sustainable development improving social, economic, environmental and cultural well-being. It sets out the sustainable development principle's five ways of working and seven national well-being goals.
- ii. **Strategic Equality Plan** This sets out how the Council makes every effort to respect children's rights, promotes healthy lives, helps tackle poverty and play its part in treating people and communities are treated with fairness, dignity and respect. It promotes equal opportunities for all, making a real difference to the lives of those living and working in Swansea.
- iii. **Corporate Plan-** This details how the Council will improve well-being in practice. It lays out priorities for action in six well-being objectives and the steps to achieve them in line with the sustainable development principle.

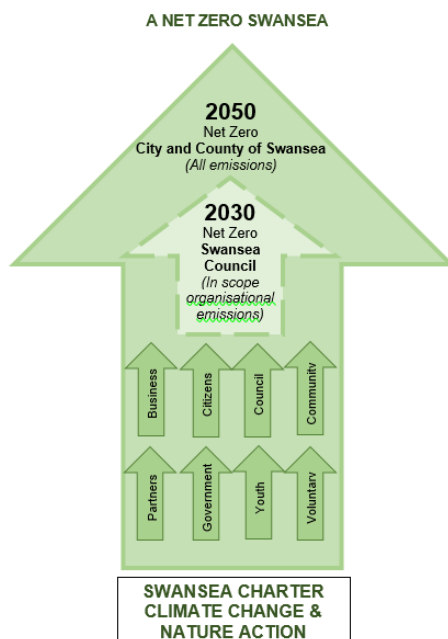

All activities must align to create a long term Climate Change and Nature Strategy and demonstrate the commitment asked of the Notice of Motions.

Governance accounts for Regional, Welsh, National and European directive alongside the additional policies and strategies sitting at Council level that will support delivery.

This approach aligns with the council's pledged to "Act in Response to the Climate Emergency" within its Corporate Plan 2020-23, aiming for carbon neutrality by 2030

9.1 Wider communication and engagement.

This will be established through a variety of routes as per below.

There will be a continued commitment to engage with **local people, groups and businesses** and help them be smarter and better prepared for the impacts of climate change and nature recovery. This will be enhanced via the Climate and Nature Charter and online pledge wall.

Swansea Council recognises that it must lead by example and use its 'Sphere of Influence' to reach out to as many citizens and businesses as possible. The Leader and Cabinet Members have signed the charter, and a more generic version for Swansea Citizens and public sector, business, charities, schools, groups etc. will be used, alongside the more simplistic pledge wall as mechanisms to seek wider buy in across the whole city and county.

Involving partners will be paramount to success, and will help support Swansea Council's ambition to lead by example. Agreed strategies will provide structure and governance to ensure delivery.

Listening to and acting on community groups, school groups ideas will help shape the strategy.

Swansea council will commit to making long term and embedded behaviour change via training and support not only within its own authority but also across the City and County, for all citizens. We want everyone to shape Swansea's vision for reaching net zero carbon.

We can make changes on a huge scale if we all make small changes to how we move, shop, eat, think and live, together.

Reducing emissions and recovering nature needs businesses and households to change. We must use more renewable energy sources such as wind, solar and geothermal. We also have to change how we use energy, by cutting down on the power we use. We need to be more mindful of food sources, the nature surrounding us, its recovery and how our communities need to adapt for the future.

Swansea Council cannot make Swansea net zero carbon on its own. We need everyone in Swansea to act now and consider what they can do to reduce their impact on the planet. We all need to take action at home, in the workplace, and across the county as a whole.

The Council is well placed to work with others. We can make the most of Swansea's collective potential and create solutions together. There will need to be major investments. We will have to make changes to existing systems of how we use and interact with energy. We must change how we live our lives. We will have to redefine how we manage and interact with our environment.

Above all, to meet this challenge, we need collective leadership and shared ambition.

Integrated Impact Assessment Screening Form

Please ensure that you refer to the Screening Form Guidance while completing this form.

Which service area and directorate are you from?

Service Area: Property Services

Directorate: Place

Q1 (a) What are you screening for relevance?

- New and revised policies, practices or procedures
- Service review, re-organisation or service changes/reductions, which affect the wider community, service users and/or staff
- Efficiency or saving proposals
- Setting budget allocations for new financial year and strategic financial planning
- New project proposals affecting staff, communities or accessibility to the built environment, e.g., new construction work or adaptations to existing buildings, moving to on-line services, changing location
- Large Scale Public Events
- Local implementation of National Strategy/Plans/Legislation
- Strategic directive and intent, including those developed at Regional Partnership Boards and Public Services Board, which impact on a public bodies functions
- Medium to long term plans (for example, corporate plans, development plans, service delivery and improvement plans)
- Setting objectives (for example, well-being objectives, equality objectives, Welsh language strategy)
- Major procurement and commissioning decisions
- Decisions that affect the ability (including external partners) to offer Welsh language opportunities and services

(b) Please name and fully describe initiative here:

Climate Change and Nature Strategy Progress Update

1.1 The report provides an update on the approved recommendations from the Cabinet report presented in November 2020, 'Climate Emergency Declaration – Policy Review and Proposed Action'. The supplementary strategy and action plan are derived following over 1000 responses to a public survey undertaken in the spring of 21, who supported a 'go faster, go further approach to tackling climate change and nature recovery.

Q2 What is the potential impact on the following: the impacts below could be positive (+) or negative (-)

	High Impact		Medium Impact		Low Impact		Needs further investigation
	+	-	+	-	+	-	
Children/young people (0-18)	<input type="checkbox"/>	<input type="checkbox"/>	x <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Older people (50+)	<input type="checkbox"/>	<input type="checkbox"/>	x <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
Any other age group	<input type="checkbox"/>	<input type="checkbox"/>	x <input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Q3 What involvement has taken place/will you undertake e.g. engagement/consultation/co-productive approaches? Please provide details below – either of your activities or your reasons for not undertaking involvement.

Over 1000 responses to public survey in March 2021, which have reinforced Swansea Council approach on this subject matter. Also working with PSB partners to align in readiness for the wider City and council of Swansea challenge to achieve net zero carbon by 2050.

Q4 Have you considered the Well-being of Future Generations Act (Wales) 2015 in the development of this initiative:

- a) Overall does the initiative support our Corporate Plan's Well-being Objectives when considered together?
 Yes x No
- b) Does the initiative consider maximising contribution to each of the seven national well-being goals?
 Yes x No
- c) Does the initiative apply each of the five ways of working?
 Yes x No
- d) Does the initiative meet the needs of the present without compromising the ability of future generations to meet their own needs?
 Yes x No

Q5 What is the potential risk of the initiative? (Consider the following impacts – equality, socio-economic, environmental, cultural, legal, financial, political, media, public perception etc...)

High risk

Medium risk
x

Low risk

Q6 Will this initiative have an impact (however minor) on any other Council service?

x Yes

No

If yes, please provide details below

All key policies drivers that influence or emissions and nature recovery are now working as an established programme board, part of the governance structure to ensure priority is given to meeting targets.

Q7 What is the cumulative impact of this proposal on people and/or communities when considering all the impacts identified within the screening and any other key decisions affecting similar groups/ service users made by the organisation?

(You may need to discuss this with your Service Head or Cabinet Member to consider more widely if this proposal will affect certain groups/ communities more adversely because of other decisions the

Integrated Impact Assessment Screening Form

organisation is making. For example, financial impact/poverty, withdrawal of multiple services and whether this is disadvantaging the same groups, e.g., disabled people, older people, single parents (who are mainly women), etc.)

Swansea Council recognises that it must lead by example and use its 'Sphere of Influence' to reach out to as many citizens and businesses as possible regarding climate change and nature recovery. The Leader and Cabinet Members have signed the climate charter, and a more generic version for Swansea Citizens and public sector, business, charities, schools, groups etc. will be used, alongside the more simplistic pledge wall as mechanisms to seek wider buy in across the whole city and county.

Involving partners will be paramount to success, and will help support Swansea Council's ambition to lead by example. Agreed strategies will provide structure and governance to ensure delivery.

Listening to and acting on community groups, school groups ideas will help shape the strategy.

Swansea council will commitment to making long term and embedded behaviour change via training and support not only within its own authority but also across the City and County, for all citizens. **We want everyone to shape Swansea's vision for reaching net zero carbon.**

We can make changes on a huge scale if we all make small changes to how we move, shop, eat, think and live, together.

Reducing emissions and recovering nature needs businesses and households to change. We must use more renewable energy sources such as wind, solar and geothermal. We also have to change how we use energy, by cutting down on the power we use. We need to be more mindful or food sources, the nature surrounding us and how our communities need to adapt for the future.

Swansea Council cannot make Swansea net zero carbon on its own. We need everyone in Swansea to act now and consider what they can do to reduce their impact on the planet. We all need to take action at home, in the workplace, and across the county as a whole.

The Council is well placed to work with others. We can make the most of Swansea's collective potential and create solutions together. There will need to be major investments. We will have to make changes to existing systems of how we use and interact with energy. We must change how we live our lives. We will have to redefine how we manage and interact with our environment.

Above all, to meet this challenge, we need collective leadership and shared ambition.

To note the Well-being of Future Generations is a pivot part of our project governance structure.

Integrated Impact Assessment Screening Form

Outcome of Screening

Q8 Please describe the outcome of your screening below:

- **Summary of impacts identified and mitigation needed (Q2)** – If we move in the right direction and bring citizens along with us then all benefits could and should be very positive, eg reduction in fuel poverty, local food supply, improved health and well-being, reduced fire, flooding to name but a few.
- **Summary of involvement (Q3)** The initial survey provided very positive feedback, we will be continuing with more general engagement but will also looking to use partners to reach out to specific communities, schools, businesses etc.
- **WFG considerations (Q4)**
- To note the Well-being of Future Generations is a pivot part of our project governance structure.

- **Any risks identified (Q5)** – Risks are medium - financially we will need to continue to lobby WG to ensure funding available to make such changes – eg decarbonisation of homes, transportation, active travel.
- **Cumulative impact (Q7)** – A brilliant and exciting opportunity to maximise the wellbeing of future generation and equality plan principles to make for a better Swansea by 2050.

(NB: This summary paragraph should be used in the relevant section of corporate report)

Full IIA to be completed

Integrated Impact Assessment Screening Form

Do not complete IIA – please ensure you have provided the relevant information above to support this outcome

NB: Please email this completed form to the Access to Services Team for agreement before obtaining approval from your Head of Service. Head of Service approval is only required via email.

Screening completed by:
Name: Rachel Lewis
Job title: Directorate Project Manager
Date: 24 th October 2021
Approval by Head of Service:
Name: Martin Nicholls
Position: Director of Place
Date: 24 th October 2021
