

Public Sector Readiness for Net Zero Carbon by 2030: Evidence Report

Report of the Auditor General for Wales

August 2022

This report has been prepared for presentation to the Senedd under the Government of Wales Act 2006, the Public Audit (Wales) Act 2004 and the Well-being of Future Generations (Wales) Act 2015.

The Auditor General is independent of the Senedd and government. He examines and certifies the accounts of the Welsh Government and its sponsored and related public bodies, including NHS bodies. He also has the power to report to the Senedd on the economy, efficiency and effectiveness with which those organisations have used, and may improve the use of, their resources in discharging their functions.

The Auditor General also audits local government bodies in Wales, conducts local government value for money studies and inspects for compliance with the requirements of the Local Government (Wales) Measure 2009.

The Auditor General undertakes his work using staff and other resources provided by the Wales Audit Office, which is a statutory board established for that purpose and to monitor and advise the Auditor General.

© Auditor General for Wales 2022

Audit Wales is the umbrella brand of the Auditor General for Wales and the Wales Audit Office, which are each separate legal entities with their own legal functions. Audit Wales is not itself a legal entity. While the Auditor General has the auditing and reporting functions described above, the Wales Audit Office's main functions are to providing staff and other resources for the exercise of the Auditor General's functions, and to monitoring and advise the Auditor General.

You may re-use this publication (not including logos) free of charge in any format or medium. If you re-use it, your re-use must be accurate and must not be in a misleading context. The material must be acknowledged as Auditor General for Wales copyright and you must give the title of this publication. Where we have identified any third party copyright material you will need to obtain permission from the copyright holders concerned before re-use.

For further information, or if you require any of our publications in an alternative format and/or language, please contact us by telephone on 029 2032 0500, or email info@audit.wales. We welcome telephone calls in Welsh and English. You can also write to us in either Welsh or English and we will respond in the language you have used. Corresponding in Welsh will not lead to a delay.

Detailed report

Background

- 1 Climate change is one of the world's defining challenges and it requires immediate action from everyone. A landmark [report by the United Nations](#) in August 2021 said that human activity is changing our climate in unprecedented ways and that drastic reductions in carbon emissions are necessary.
- 2 The latest climate projections for Wales show an increased chance of milder, wetter winters and hotter, drier summers, rising sea levels and an increase in the frequency and intensity of extreme weather events. The implications are clearly stark.
- 3 A crucial way to mitigate the further impacts of climate change is to reduce carbon emissions. In March 2021, following advice from the Climate Change Committee¹ in December 2020, the Welsh Government set [targets for a 63% carbon reduction by 2030](#), an 89% reduction by 2040, and a 100% reduction by 2050². In addition, the Welsh Government set out a more challenging collective ambition for the Welsh public sector³ to be net zero carbon by 2030 (the 2030 collective ambition).
- 4 In June 2021, the Welsh Government published its [Programme for Government 2021-2026](#) which puts tackling the climate and nature emergencies at the heart of the new government. The Programme for Government also makes a series of commitments to embed a response to climate change in everything the Welsh Government does.

1 The Climate Change Committee (CCC) is an independent, statutory body established under the Climate Change Act 2008. Its role is to advise the UK governments on emissions targets and to report on progress made in reducing greenhouse gas emissions and preparing for and adapting to the impacts of climate change.

2 Net zero does not mean eliminating greenhouse gas emissions but balancing the greenhouse gas emissions with the amount of gas being removed from the atmosphere.

3 The Welsh Government's definition of the 'public sector' in this case covers 65 bodies as set out in Appendix 2 of the Welsh Government, [Public sector net zero data: baseline and recommendations](#), June 2022.

- 5 The Welsh Government has also published [Net zero carbon status by 2030: A route map for decarbonisation across the Welsh public sector](#) (the public sector route map) to support the Welsh public sector in achieving the collective ambition. Alongside the public sector route map the Welsh Government has published the [net zero reporting guide](#) and associated spreadsheet to allow the public sector to capture and report emissions on a consistent basis. Our separate [key findings report](#) provides further detail on the national strategic direction for decarbonisation and its underpinning policy and legislative framework.
- 6 The Auditor General has committed to carrying out a [long-term programme of work on climate change](#). Our first piece of work is a baseline review that asks: '**How is the public sector preparing to achieve the Welsh Government's collective ambition for a net zero public sector by 2030?**'. To inform the baseline review, 48 public bodies, including the Welsh Government, completed a call for evidence. **Appendix 1** explains our audit approach and methods.
- 7 We have published two reports to share our findings:
 - a **key findings report**: a summary report, published in July 2022, that targets senior leaders and those with scrutiny roles in public bodies, with the aim of inspiring them to increase the pace of their work on achieving the 2030 collective ambition. In that report, we set out the overall conclusion from our work and five calls for action for organisations to tackle the common barriers to decarbonisation in the public sector. The [key findings report](#) also notes that application of the sustainable development principle and the frameworks provided by the Well-being of Future Generations (Wales) Act 2015 can be used to help organisations to decarbonise.
 - b **this evidence report**: supplementing the key findings report by providing more detailed findings and data from the call for evidence and our wider work.

Confidence in meeting the 2030 collective ambition

8 We found considerable uncertainty (and clear doubt from some) about whether the collective ambition for a net zero public sector will be achieved by 2030. **Exhibit 1** shows that in our call for evidence, 20 out of 48 bodies agreed or strongly agreed they were confident that their organisation would meet the 2030 collective ambition, whereas 23 said they neither agreed nor disagreed and five disagreed or strongly disagreed.

Exhibit 1: public bodies’ responses to the statement, ‘Our organisation is confident that it will meet the 2030 target to have net zero carbon emissions’

Source: Audit Wales call for evidence

9 For NHS bodies, the NHS Wales Decarbonisation Strategic Delivery Plan (the NHS plan) includes a target to deliver a 34% reduction in carbon emissions by 2030. This target is based on a calculation about the reduction in emissions that can be realistically expected from the 46 initiatives set out in the plan. Our evidence from NHS bodies indicates considerable uncertainty about meeting this target (as well as the more challenging net zero ambition). **Paragraph 50** provides further consideration of the barriers to achieving the 2030 collective ambition.

- 10 The evidence suggests there is a need for greater clarity on how the 34% target fits within the wider context of the 2030 collective ambition. The Welsh Government has deliberately set a stretching collective ambition to stimulate action, although it is not a statutory target. At the same time, the NHS has set itself a less stretching target of a 34% reduction by 2030, while other parts of the public sector do not have separate targets. The health sector accounts for around a third of the public sector carbon emissions in Wales⁴. If the NHS was to achieve only a 34% reduction in emissions, it would make it significantly more difficult to achieve an overall net zero position across the public sector.
- 11 **Exhibit 2** provides examples of what public bodies told us in relation to the 2030 collective ambition and the likelihood of it being achieved.

4 As set out in [Public Sector Net Zero: data and recommendations](#), health boards and trusts produced 1,134,000 tonnes of CO₂ against a total of 3,279,000 tonnes produced by the public sector as a whole in 2020-21.

Exhibit 2: some comments from public bodies about the 2030 collective ambition

- ‘We recognise the enormity of the challenge we face.’
- ‘We are committed to contributing to the Welsh Government’s ambition for the public sector to be net zero by 2030 and will endeavour to deliver on or exceed the targets it sets.’
- ‘Not yet sufficiently clear what it will mean in practice.’
- ‘We do not have complete confidence that we will be able to measure the results of our actions.’
- ‘It will involve decarbonisation action in areas that we have yet to develop decarbonisation expertise, for example, in procurement and local area energy planning.’
- ‘If our entire supply chains are not zero carbon, then we cannot be either.’
- ‘The council is committed to achieving its net zero ambitions, notwithstanding the challenges.’
- ‘The level of financial investment will be a driver in whether or not we achieve our ambition and how quickly we’re able to act.’

Source: Audit Wales call for evidence

“ We recognise the enormity of the challenge we face ”

Strategic direction and action planning for decarbonisation

National strategic direction

12 **Exhibit 3** shows that public bodies were generally positive about the Welsh Government’s strategic direction on decarbonisation. Public bodies were also largely positive about the way in which the Welsh Government had engaged with them through various channels over the approach to achieving net zero.

Exhibit 3: public bodies’ responses to the statement, ‘The Welsh Government has set a clear strategic direction for public bodies in Wales to support the achievement of their 2030 carbon reduction targets’

Source: Audit Wales call for evidence

- 13 **Exhibit 4** provides examples of what public bodies told us in relation to the national strategic direction.

Exhibit 4: some comments from public bodies about the national strategic direction

- ‘Welsh Government have set a clear strategic direction in terms of ambition and there is a clear and consistent message in terms of where we need to get to.’
- ‘We have used the strategic direction and guidance as a framework to develop an organisational climate change plan.’
- ‘The strategic direction has been set out clearly by Welsh Government but how we get there as local authorities, and the support we receive is not clear.’
- ‘I believe that the government could be offering more support ensuring that the guidance provided is consistent for everyone.’
- ‘Further work is required by (Welsh Government) to publicise the wider strategic narrative and tools available.’
- ‘The National (NHS Wales) Strategic Decarbonisation Plan provides a clear direction of travel for Wales and robust evidence base for the priorities within (our area).’
- ‘The NHS Wales Decarbonisation Strategic Delivery Plan sets out a number of actions with clear timelines.’

Source: Audit Wales call for evidence

“ The strategic direction has been set out clearly by Welsh Government but how we get there as local authorities...is not clear ”

- 14 The public sector route map is a key part of the national strategic direction. Some public bodies told us they view the public sector route map as a high-level thematic and strategic framework. They told us it sets the overall direction, and is an accessible, well-presented and user-friendly document. Several bodies made comments about the usefulness of the route map as a tool for explaining, identifying, developing and delivering actions. Some also told us that the route map was a valuable aid for explaining responsibilities and requirements to senior management, members and board members.
- 15 Nevertheless, several non-NHS bodies said they wanted more help to translate the strategy into local, day-to-day operations, through their action plans. These organisations told us that while the public sector route map provides a high-level template, they need more clarity, support and guidance on how to decarbonise. The Welsh Government told us that it deliberately designed the route map to be a high-level framework to assist public bodies in developing local solutions based on individual circumstances, rather than a one-size-fits-all approach. In addition, the Welsh Government does provide other sources of support to public bodies through the Welsh Government Energy Service and through the Wales Funding Programme, as set out in **paragraph 22**.
- 16 **Exhibit 5** provides a summary of some concerns public bodies expressed about the public sector route map. **Exhibit 18** expands on some of these concerns as part of a discussion about wider barriers to decarbonisation.

Exhibit 5: summary of concerns from public bodies about the public sector route map

- **Timeliness:** Overall, public bodies felt there was consistency between the direction set by the Welsh Government and their individual approaches. However, due to the timing of the route map's publication⁵, some bodies had already started developing their own strategies and action plans so there is not always complete read across to the route map. There is an opportunity to fully align when strategies and action plans are refreshed.
- **Detail:** the public sector route map needs additional clarity, support and guidance on how to decarbonise.
- **Targets:** some of the targets and the timeframes to achieve them are very challenging.
- **Funding:** there is a lack of planned, long-term, external investment from the Welsh Government to support delivery.
- **Inconsistency:** potential for inconsistent interpretation of the guidance and the reporting requirements.
- **Calculations:** further detail and clarity are needed in the carbon calculator, specifically in relation to the procurement and land use themes.

Source: Audit Wales call for evidence

5 The Welsh Government chose to delay publication of the route map during the COVID-19 pandemic because it did not want to overburden public bodies at such a difficult time.

Sector-specific strategies and support for decarbonisation

- 17 In the health and care sector, the Welsh Government has convened the Climate Change and Decarbonisation Programme Board for Health and Social Care, to help lead, support and give strategic oversight to decarbonisation work. Guidance on decarbonisation is available to NHS bodies through the NHS plan which was published alongside the public sector route map in May 2021. The Carbon Trust and the NHS Wales Shared Services Partnership developed the NHS plan, which sets out 46 initiatives for decarbonisation that will be assessed and reviewed in 2025 and 2030.
- 18 The NHS plan aligns with the public sector route map, provides more detail and allocates responsibility for initiatives and actions to different parts of NHS Wales. The NHS plan focuses on traditional areas of decarbonisation, such as buildings and transport. While these remain important areas of focus, the Welsh Government has acknowledged that the section on decarbonising healthcare⁶ is less detailed, reflecting the developing practice in this area.
- 19 Our call for evidence responses from NHS bodies demonstrated a focus on and commitment to delivering the actions set out in the NHS plan. And while there appears to be support in the health sector for the NHS plan, the Welsh Government recognises there is scope to strengthen its co-ordination and leadership.
- 20 In local government, the Welsh Local Government Association is developing tailored support and guidance for councils on decarbonisation. The Welsh Government funds the Welsh Local Government Association transition and recovery support programme. Focussing on the key themes of the public sector route map, the programme provides a range of support including toolkits, commissioned research on interventions to achieve net zero, training to build knowledge and expertise, and events to facilitate sharing of best practice. The Welsh Government is also part of the [Local Government Climate Strategy Panel](#) which supports and gives strategic overview to decarbonisation work in local government.
- 21 The Welsh Government does not currently plan to produce specific decarbonisation plans for other sectors covered by the public sector route map. However, it acknowledges that more support and guidance may be needed for bodies outside of the NHS and local government.

6 Decarbonising healthcare refers to reducing carbon emissions in health services rather than decarbonising the physical infrastructure surrounding healthcare. Examples include the use of medical gases and inhalers that involve greenhouse gases.

22 The Welsh Government is providing other central assistance on decarbonisation, including support through the Welsh Government Energy Service (WGES) and grant funding for various programmes. The WGES provides technical advice and other support to public sector bodies and community enterprises on energy efficiency, renewable energy projects and fleet improvements. The WGES annual report provides further information about the support it provides. The Welsh Government has made funding available for public sector decarbonisation projects through the Wales Funding Programme, which aims to make buildings and assets more energy efficient.

Local strategic direction

23 **Exhibit 6** shows that most public bodies were confident their organisation had set a clear, local strategic direction to deliver the 2030 collective ambition.

Exhibit 6: public bodies’ responses to the statement, ‘Our organisation has set a clear strategic direction to support the achievement of the 2030 carbon reduction targets’

Source: Audit Wales call for evidence

24 However, **Exhibit 7** shows that public bodies are at very different stages in setting out their action plans for decarbonisation. Within these responses, NHS bodies appeared to be a bit further behind local government.

Exhibit 7: status of public bodies’ action plans

Note: One public body did not respond to this question.
Source: Audit Wales call for evidence

25 **Exhibit 8** shows variation in the extent to which public bodies are using the public sector route map to guide their own strategic approach, with five responding to say that they are not using it at all.

Exhibit 8: public bodies’ responses to the question, ‘Is your organisation using the Welsh Government’s public sector route map to guide its approach to reducing carbon emissions?’

Source: Audit Wales call for evidence

Governance and leadership arrangements for decarbonisation

- 26 It is important that public bodies have effective internal governance and leadership arrangements to drive decarbonisation. Public bodies described various existing and new structures, including boards and dedicated senior staff groups. For example, all NHS bodies have an identified director or executive director to oversee decarbonisation. Responses to the call for evidence also acknowledged that clear structures are essential and need to be regularly reviewed to ensure they remain fit for purpose.
- 27 Public bodies recognised the importance of engaging all staff in the critical issue of decarbonisation, but they acknowledged that more needs to be done. Upskilling of staff through training was identified as key to supporting the delivery of the 2030 collective ambition. However, more needs to be done to ensure upskilling covers the whole staff base and not just senior leaders or those charged with governance.
- 28 **Exhibit 9** provides examples of what public bodies told us in relation to their governance and leadership arrangements for decarbonisation.

Exhibit 9: some comments from public bodies about their governance and leadership arrangements for decarbonisation

- ‘A climate and nature emergency officer group has been established to lead, facilitate and support the delivery of the action plan.’
- ‘The health board has established a sustainability and decarbonisation programme board led by the Executive Director Finance.’
- ‘The council has just appointed ... a Climate Change Manager.’
- ‘We are building decarbonisation into the clinical model which will be operating in new hospital infrastructure going through business case stages.’
- ‘Some early adopter clinical departments are creating their own sustainability action plans.’
- ‘[We] will appoint a board director as decarbonisation lead (and senior responsible officer) and establish a steering group to oversee our decarbonisation programme.’
- ‘The Sustainable Group is chaired by the Executive Director of Strategy and attended by staff from across the health board, including clinicians and those networked into a wide range of partner forums.’
- ‘The council established its cross-party Climate Change and Ecological Emergency Working Group after declaring the climate and ecological emergency. The Working Group was supported by a team of officers.’

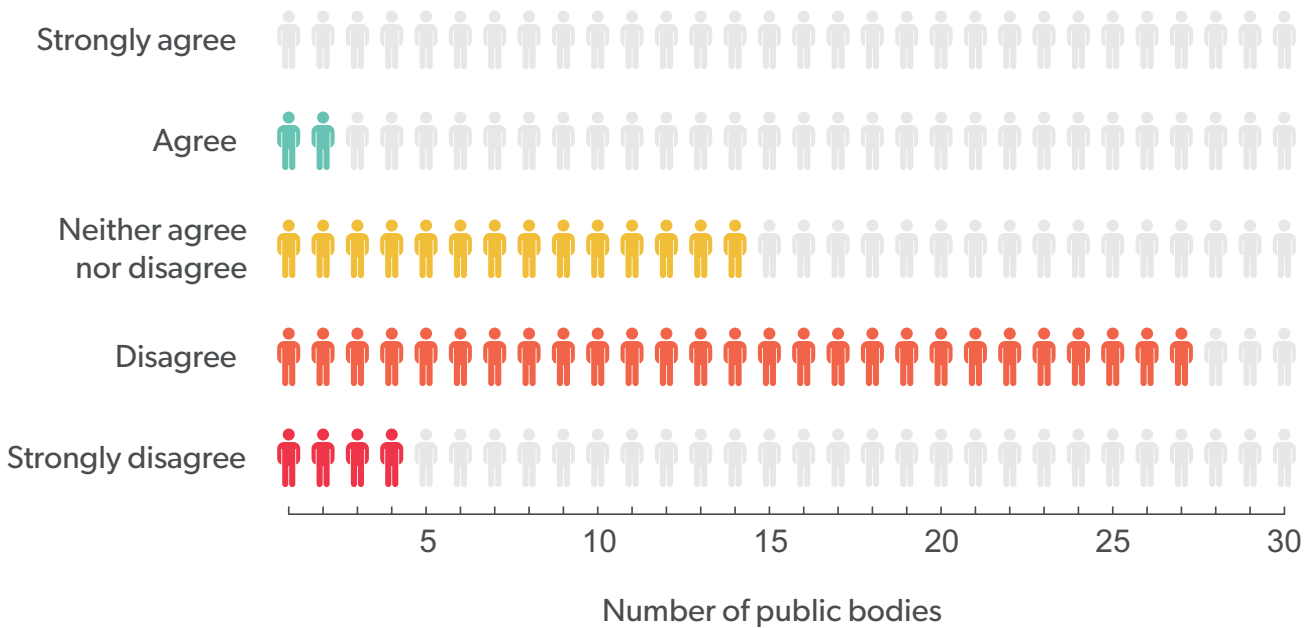

Source: Audit Wales call for evidence

**“ We are building
decarbonisation into the
clinical model ”**

Financial implications of decarbonisation

29 **Exhibit 10** shows that most public bodies have not fully assessed the financial implications of meeting the 2030 collective ambition. A few responses to the call for evidence included costings of specific recent or imminent projects but we did not see evidence of fully costed, long-term decarbonisation programmes. We are aware that some public bodies have since developed more detailed estimates for short to medium-term expenditure.

Exhibit 10: public bodies’ responses to the statement, ‘Our organisation has fully assessed the financial implications of meeting the 2030 carbon reduction targets’

Note: One public body did not respond to this question.
Source: Audit Wales call for evidence

30 In some cases, public bodies told us that they have not assessed the financial implications because they have not yet set out a clear set of actions and activities to achieve net zero. However, they were aware of the urgency and the need to increase the pace of implementing actions. Public bodies were very clear that decarbonisation at scale will require significant additional financial resources and that the absence of these funds will be a significant barrier to progress.

- 31 Public bodies need to plan their finances in such a way that they can deliver their decarbonisation strategies and action plans. This will require long-term planning because decarbonisation will need investment for many years. It will also require immediate expenditure because if the 2030 collective ambition is to be met, urgent action is essential. Public bodies told us significant long-term investment will be needed, particularly in relation to making their infrastructure fit for purpose to enable the decarbonisation of operations. However, public bodies expressed uncertainty over what additional funding would be available from the Welsh Government. They also pointed to the short-term nature of public sector funding and budget cycles making their longer-term financial planning more difficult.
- 32 The Welsh Government told us they are providing targeted funding for public bodies in certain areas but they also said they are unable to fund all activity required. The Welsh Government acknowledges that there will be additional costs in some areas and that funding will be provided to bridge some of those gaps, when moving to low carbon alternatives, for example, the increased cost of purchasing electric fleet rather than those powered by traditional fossil fuels. However, the Welsh Government said that as decarbonisation becomes increasingly mainstreamed into routine thinking, public bodies should not be focussed on additional funding, and they should move to a position where decarbonisation is funded through their existing budgets as a result of a strong business case.
- 33 **Exhibit 11** provides further examples of what public bodies told us in relation to the financial implications of decarbonisation.

Exhibit 11: some comments from public bodies about the financial implications of decarbonisation

- ‘The financial implications of decarbonisation have not been fully considered.’
- ‘We recognise that we have further work to do on this front.’
- ‘The council recognises that achieving its net zero ambition will have implications for its budget in the short and long term.’
- ‘Until the council formulates a detailed fully costed 2030 net zero delivery plan the council is unable to accurately assess the financial implications.’
- ‘It should be acknowledged that funding will be required to deliver the aim of net zero by 2030.’
- ‘There are no cost estimates for medium-term levels of expenditure.’
- ‘The cost of decarbonising our clinical operations has not been estimated.’

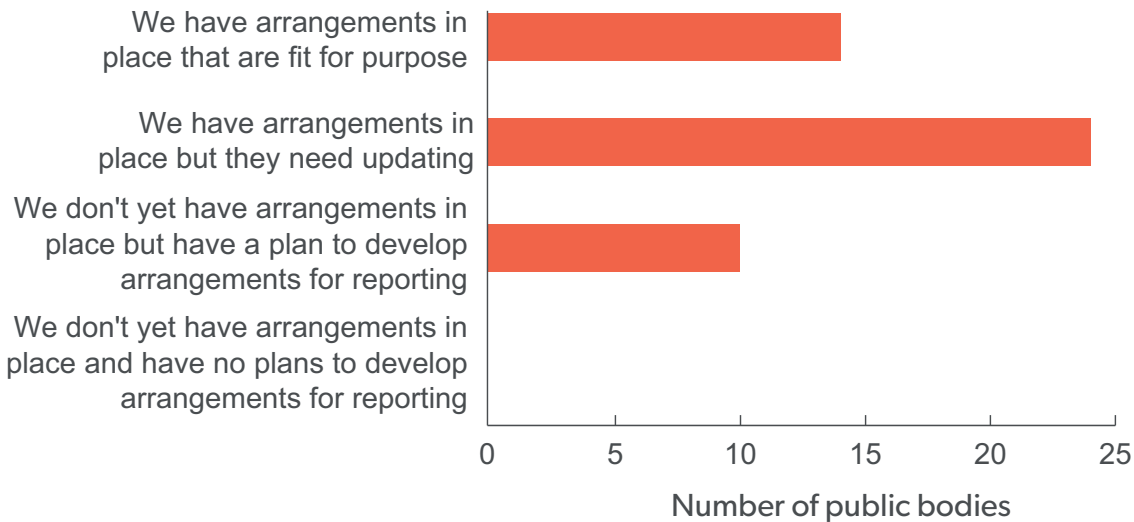

Source: Audit Wales call for evidence

“ The council recognises that achieving its net zero ambition will have implications for its budget in the short and long term ”

Reporting progress on decarbonisation

34 Public bodies need to understand where their emissions are coming from so they can check if they are making progress and prioritise their actions. We found that data issues are a major barrier to having a shared understanding of the problem and to taking strategic decisions about the solutions. **Exhibit 12** shows that 14 bodies indicated they had reporting arrangements that they felt were fit for purpose, 10 did not have arrangements in place, and 24 had arrangements that needed updating.

Exhibit 12: public bodies’ responses to the question, ‘Which of the following options best describes your organisation’s arrangements for reporting on progress towards net zero carbon emissions?’

Source: Audit Wales call for evidence

35 Current monitoring and reporting tend to be done through reports or dashboards to cabinet, council, board, scrutiny committee or other groups. Some bodies report on decarbonisation as part of reporting progress on their corporate plans or wellbeing objectives. Some responses pointed to dedicated climate groups and other arrangements that have been set up specifically to monitor and report on decarbonisation activity.

36 Overall, the evidence suggests there is scope for improved reporting on decarbonisation. This finding aligns with [a blog we published in February 2022](#) that called for clearer information on climate change actions to be included in public bodies’ financial statements, to ensure greater transparency and accountability.

- 37 The Welsh Government has published a common reporting methodology (see **paragraph 5**) for public bodies to report their emissions through the Welsh Public Sector Net Zero Reporting Guide and net zero reporting spreadsheet. The Welsh Government asked public bodies to submit the first data by October 2021 for the 2020-21 financial year.
- 38 In responses to our call for evidence, public bodies generally recognised the usefulness of having a common reporting methodology but found aspects of the submission challenging and highlighted problems with the data collection in October 2021. Some responses pointed to concerns over calculation methods, particularly regarding supply chain. In relation to supply chain emissions, public bodies pointed to the fact that the calculation is based on the cost of the contract rather than the actual emissions generated by the product or service procured. Public bodies also called for further clarity of definitions to ensure consistent interpretation and reporting. Some responses also noted that existing systems were not able to capture the required data, and had to be updated, or new systems had to be put into place. This was often time consuming and resource intensive.
- 39 Public bodies pointed to some other concerns about the common reporting methodology. Some respondents said the way in which emissions from land use is reported is too simplistic.
- 40 NHS bodies also raised concerns about duplication with already established reporting on carbon emissions such those required by the Estates and Facilities Performance Management System⁷. This created confusion in the first reporting year. NHS bodies wanted further clarity to avoid duplication between these reporting requirements.

7 The Estates and Facilities Performance Management System is a comprehensive set of estates and facilities data. The Welsh Government set up the system in 2002 to improve the management of the NHS estate. It allows NHS bodies to compare performance against other NHS bodies in Wales and England.

- 41 The Welsh Government recognises improvements are required in the existing reporting approach and has committed to learning from feedback and improving methods and systems where required. The Welsh Government commissioned consultants, to review the first submission of data from public bodies and, in June 2022, the Welsh Government published the consultancy report, Welsh Public Sector Net Zero: Baseline and recommendations in full. The report states that the figures include significant uncertainty, particularly in relation to supply chain emissions, which it said represented 87% of public sector emissions. Plus, the data has not been thoroughly audited. The figures also suggest emissions across Wales for the public sector reduced by 5% between 2019-20 and 2020-21.
- 42 As this is the first year of the reporting guide, it is a period of learning, and the calculation for reporting emissions will be further developed where required. Following feedback from public bodies, and the review of the data submissions from an external consultant, the Welsh Government published a revised reporting guide and tool in July 2022.
- 43 **Exhibit 13** provides examples of what public bodies told us in relation to the monitoring and reporting on decarbonisation.

Exhibit 13: some comments from public bodies about monitoring and reporting on decarbonisation

- ‘We followed the emissions reporting guidance as closely as possible.’
- ‘Two distinct areas need to be strengthened/clarified which are waste and supply chain.’
- ‘We appreciate the advantages of having a consistent format to aid our own and Welsh Government monitoring of progress.’
- ‘The supply chain emissions reporting method needs significant refinement in order to be considered accurate.’
- ‘Current data gathering and reporting functions require updating.’
- ‘We are developing the necessary reporting tools to meet the requirements of the Net Zero Carbon Reporting Guidance.’

Source: Audit Wales call for evidence

“ We appreciate the advantages of having a consistent format to aid our own and Welsh Government monitoring of progress ”

Collaboration and engagement with other bodies, staff, and citizens

- 44 To support collaboration and engagement at a national level, the Welsh Government published Climate Change: Welsh Government Engagement Approach 2022-26 in June 2021. The document refers to a Team Wales approach, where everyone in Wales plays a role in collective action on climate change. The engagement approach has two key objectives:
 - to generate timely and effective engagement of stakeholders on matters of climate change; and
 - to strengthen and grow the coalition of Team Wales to tackle the climate emergency.
- 45 **Exhibit 14** shows that public bodies feel they are working well with other organisations on decarbonisation. And **Exhibit 15** sets out comments made by public bodies about their collaborative efforts to date and aspirations for the future.

Exhibit 14: public bodies’ responses to the statement, ‘Our organisation is effectively collaborating with other bodies to achieve the 2030 carbon reduction targets’

Source: Audit Wales call for evidence

Exhibit 15: some comments from public bodies about collaboration

- ‘Through the public services board (PSB) we have established a Climate Emergency Board which comprises existing PSB members, but also additional organisations including utility providers and our local university.’
- ‘As part of our Well-being Plan work, we are currently working collaboratively with our partners and are in the early stages of developing a Climate Strategy for the city.’
- ‘We are working closely with public sector partners through the North Wales Regional Leadership Board. We participate in the North Wales Decarbonisation Advisory Group.’
- ‘We have completed an informal analysis of who we need to work with, but we have not yet completed a formal analysis of partners.’
- ‘Collaboration between NHS organisations has been low, though is changing through Welsh Government setting up a Climate Change Programme Board.’
- ‘We have multiple representatives on the Decarbonisation Action Plan: Community of Experts. This will share learning and good practice across the health boards in Wales.’
- ‘We feel that a formal Welsh public sector decarbonisation working group would address some of the challenges faced by serving communities covered by multiple local authority agencies.’

Source: Audit Wales call for evidence

“ We feel that a formal Welsh public sector decarbonisation working group would address some of the challenges ”

- 46 Some bodies have set up their own local collaborative arrangements for decarbonisation, whereas other bodies are collaborating through Welsh Government or Welsh Local Government Association convened arrangements or through statutory fora such as public services boards. A significant proportion of bodies had also involved external experts in their decarbonisation efforts, such as the Carbon Trust.
- 47 Smaller bodies, such as the national parks and Welsh Government sponsored bodies, told us they have been collaborating well with each other. They said that due to their size, they are somewhat reliant on external expertise and advice in relation to decarbonisation.
- 48 Some public bodies acknowledged that their focus to date had been on establishing internal structures, rather than on external collaboration. And notwithstanding the responses shown in **Exhibit 14**, many public bodies agreed that collaboration and engagement needed to be strengthened.
- 49 There is scope for stronger engagement and involvement with staff and the public. **Exhibit 16** shows mixed views from public bodies about the extent to which they are engaging and involving their staff. And **Exhibit 17** shows that only 15 of the 48 public bodies we contacted were confident that they were effectively engaging with the full diversity of the population. Some public bodies told us about engagement with the public through mechanisms such as online surveys, social media channels and community groups but they generally acknowledged that this engagement needs to improve. This is significant as both our 2019 report on [fuel poverty](#)⁸ and the Decarbonisation of Homes in Wales Advisory Group⁹ found there are some difficult trade-offs between social justice and carbon reduction goals. Engagement with the full diversity of the population should help public bodies in their efforts to make a just transition¹⁰ towards net zero carbon emissions.

8 Auditor General for Wales, Fuel Poverty, October 2019

9 Decarbonising Homes in Wales Advisory Group, [Better Homes, Better Wales, Better World: Decarbonising existing homes in Wales](#), July 2019

10 A 'just transition' means taking action on climate change and greening the economy in a way that is as fair and inclusive as possible to everyone concerned. Policy 1 in Net Zero Wales Carbon Budget 2 (2021-2025) sets out the Welsh Government's views on a just transition.

Barriers, opportunities and interesting practices on decarbonisation

50 We asked public bodies about the barriers to achieving the 2030 collective ambition. **Exhibit 18** summarises the barriers they told us about that were largely common across the public sector, many of which are explored earlier in the report. One common theme was that decarbonisation is complex, requiring significant investment and that many of the easy wins had been achieved. However, public bodies were aware that the pace of activity needs to increase and there are reputational risks of not doing so.

Exhibit 18: summary of public bodies' views about barriers to meeting the 2030 collective ambition

Barriers

Finance

This was the most commonly mentioned barrier. Bodies pointed to the need for significant and sustained revenue and capital investment in the short and long term. They said there was a particular need for investment in improving infrastructure, estates, appliances and equipment that are not fit for carbon reduction.

These matters are discussed further in **paragraphs 29 to 33**.

Staff capacity and skills gaps

Public bodies told us existing staff capacity is stretched delivering public services. Decarbonisation is a complex area and public bodies feel they do not have the skills and expertise in this area. There is considerable competition for people with specialist expertise and knowledge.

Financial constraints make it difficult for some bodies to bring in additional staff. In addition, as the private sector can offer higher salaries, public bodies are at a disadvantage in attracting staff.

Understanding the activities required

Public bodies are still building an understanding of the specific activities that are needed to decarbonise and how these should be prioritised. Public bodies feel that they need additional support and guidance on how to translate the strategic approach into action.

Culture, education and training

Embedding decarbonisation in day-to-day activities can represent a significant cultural shift. Some public bodies told us that decarbonising is complex and it may be difficult to change longstanding approaches to delivery.

Some bodies said there is the potential for staff apathy to having to undertake additional decarbonisation activities on top of the day job. Significant communication with staff will be required to obtain buy in and extensive training will also be needed to upskill staff to deliver.

Technology and infrastructure

Many new technologies are expensive and public bodies are cautious about investing due the risks of the technology not being effective or becoming obsolete.

In other areas, such as the development of electric-powered ambulances and fire appliances, public bodies told us the technologies were not developing quickly enough and in some cases were prohibitively expensive.

There were also concerns about a lack of electric charging points and insufficient grid capacity to cope with the growing reliance on electricity.

Supply and demand issues are also a problem in relation to some new technologies, where technologies are sought-after but are limited in supply.

Data

Public bodies recognised the usefulness of having a common methodology for reporting carbon emissions. However, some responses pointed to concerns over calculation methods, particularly regarding supply chain and land use, and called for further clarity of definitions to ensure consistency.

Some responses noted that existing systems were not able to capture the required data, and had to be updated, or new systems had to be put into place. This was often time consuming and resource intensive. NHS bodies raised concerns about duplication with existing reporting arrangements on emissions.

Joined-up approach

Some respondents told us that a wholesale change of thinking is required, with a more co-ordinated and joined-up approach across the public sector, driven by the Welsh Government.

One example given related to the assessment of new and emerging technologies. Public bodies were concerned about investing in technologies that were quickly superseded or were not best practice, so a single public sector-wide decision over what is best would help mitigate this risk.

Third parties

Third parties have a role to play in helping public bodies move towards the 2030 collective ambition. For example, emissions from partners in the procurement chain, and the high demand for limited specialist resources and newer technologies such as electric vehicles meaning they are often not available.

The Office of the Future Generations Commissioner for Wales has recommended previously that public bodies should set out clearly how they have considered the carbon impact of their procurement decisions¹¹.

11 Office of the Future Generations Commissioner, [Procuring well-being in Wales](#), February 2021.

- 51 While public bodies identified a range of barriers to achieving the 2030 collective ambition, they also see some opportunities associated with decarbonisation (**Exhibit 19**) and shared with us some examples of interesting practices that they felt other bodies could potentially learn from (**Exhibit 20**).

Exhibit 19: some opportunities that public bodies told us about in relation to decarbonisation

Public bodies highlighted opportunities to:

- build on the profile of climate change from [COP26](#) to take advantage of the raised public awareness and build relationships with local communities and other stakeholders;
- increase collaboration with other organisations, to share best practice in working towards decarbonisation and to develop local procurement approaches;
- increase the use of new and developing technologies, realise cost savings from renewable energies and consider the economic and job creation possibilities arising from new green industries;
- increase awareness of the urgency of decarbonisation with staff, executives, boards and members, and to revise governance and leadership arrangements to ensure decarbonisation is incorporated into everyday business and decision making; and
- build on flexible working practices that arose during the COVID-19 pandemic to further exploit digital technologies in service delivery and everyday working.

Exhibit 20: some examples of interesting practices that other bodies could learn from

Cardiff and Vale University Health Board

The health board is involved in an initiative called [Green Health Wales](#) to build a community of healthcare professionals who can share experience with their colleagues across the country. Green Health Wales aims to empower the health and social care sector with the tools and knowledge to address the climate crisis.

The health board has not estimated the cost of net zero building infrastructure on the current estate configuration, however, specialists in 2021 estimated that in a new-build scenario of the University Hospital of Wales and the University Hospital Llandough, the cost of net zero building infrastructure could be between £89 million and £266 million.

Denbighshire County Council

The council established its cross-party Climate Change and Ecological Emergency Working Group after declaring the climate and ecological emergency. A key recommendation from the working group was to amend the council's constitution to include the need to have 'regard to tackle climate and ecological change' in the principles of decision making. The council has now formally committed to consider climate and ecological change when making all council decisions.

Swansea Bay University Health Board

The health board is developing a trajectory tool to measure the impact of different scenarios of financial input into decarbonisation measures. It will use the tool to monitor the efficacy of its decarbonisation measures.

A solar farm is directly connected to Morriston Hospital which supplies 30% of its electricity.

Blaenau Gwent County Borough Council

The council has been involved in establishing a mitigation steering group through the Blaenau Gwent Local Well-being Partnership, and residents' priorities have informed the group's work through the recommendations of the Blaenau Gwent Climate Assembly. The council, in its decarbonisation plan, has identified a number of transition pathways to follow in order to achieve net zero. Each transition pathway represents a coherent area of action with distinct, low carbon technologies, business models and infrastructure. These pathways have been developed to allow each to proceed at their own appropriate pace. Achievement of the pathways is supported by best practice readiness assessments adapted from tools developed by [Place-Based Climate Action Network](#) for [Leeds Climate Commission](#).

Rhondda Cynon Taf County Borough Council

The council has established a '[Let's Talk](#)' engagement website where members of the public can leave comments and ideas about a range of climate change matters.

Natural Resources Wales (NRW)

NRW's Carbon Positive Project, part funded by the Welsh Government to show leadership in how the public sector can measure and reduce its carbon impact, has informed the development of both the public sector route map and the net zero reporting guide. As part of the project, NRW is taking steps to not just reduce carbon emissions but enhance and protect carbon stored on the land it manages and share its experiences to encourage further decarbonisation in Wales.

Neath Port Talbot Council

The council is collaborating with a private company that specialises in the re-use of waste gases from industrial processes to enable conversion into biofuels. The plan is to deliver a pilot project within Neath Port Talbot which will utilise waste gases from the steel industry. It is anticipated that once fully operational, the plant will generate 30 million gallons of biofuels for use in the aviation industry each year.

The council's Lost Peatlands Project seeks to restore more than 540 hectares of historic landscape and habitat, including peat bogs and pools, heathland, grassland and native woodland.

Numerous public bodies

Several organisations gave us examples of:

- using the new construction or redevelopment of facilities to significantly improve their carbon footprint;
 - procurement of low emission vehicles;
 - installation of electric vehicle charging points;
 - renewable energy generation on site;
 - development of operational staff networks; and
 - installation of energy efficient heating and lighting systems.

Appendices

1 Audit approach and methods

1 Audit approach and methods

In November 2021, we issued a call for evidence to 48 public bodies, asking questions about their baseline position in achieving the 2030 collective ambition. Most public bodies responded in the period December 2021 to January 2022. We sent the call for evidence to the bodies covered by the [Well-being of Future Generations \(Wales\) Act 2015](#) at the time. This included all principal councils, fire and rescue authorities, national park authorities, health boards and NHS trusts, and the larger Welsh Government sponsored bodies.

We also sent the call for evidence to the Welsh Ambulance Services NHS Trust, Digital Health and Care Wales, and Health Education and Improvement Wales to ensure we had a more complete picture across the NHS. We also sent the call for evidence to NHS Wales Shared Services Partnership (NWSSP), which is an independent mutual organisation, owned and directed by NHS Wales, that delivers a range of services for and on behalf of NHS Wales. NWSSP is hosted by and operates under the legal framework of Velindre University NHS Trust, which is itself covered by the [Well-being of Future Generations \(Wales\) Act 2015](#).

We received responses from all bodies that were sent the call for evidence although in a small number of instances not all questions were answered. Where questions were not answered by all public bodies, this is set out in a note to each relevant graph.

To inform our work we held discussions with relevant stakeholders including the Welsh Government, the Office of the Future Generations Commissioner for Wales, representatives of NHS Wales and the Welsh Local Government Association. We also reviewed key documents, including policies and guidance, and other relevant information provided to us by the Welsh Government and other stakeholders.

We did not undertake a detailed review at each of the public bodies. While we have largely relied on what they reported through their call for evidence responses and any supporting documentation, we have also sought to triangulate our findings through discussions with stakeholders and evidence from our wider document and data review. We also shared and discussed our emerging findings at a [public webinar](#) held in May 2022. 109 people from outside Audit Wales attended the webinar, representing a range of public, private and third sector organisations.

As stated earlier in this report, the Auditor General has committed to a long-term programme of work on climate change. We have already reported on the decarbonisation efforts of fire and rescue authorities, we have begun to review council decarbonisation action plans and we are preparing a report on flood risk management. Following a recent consultation on our future work programme, we are considering our next steps in relation to auditing actions to decarbonise and to adapt to the changes already happening to our climate.
